Appeared on best of the year lists from The New York Times, The Guardian, and more! Winner of The Cartoonist Studio Prize for Best Print Comic of the Year! Grass is a powerful antiwar graphic novel, telling the life story of a Korean girl named Okseon Lee who was forced into sexual slavery for the Japanese Imperial Army during the Second World War—a disputed chapter in twentieth-century Asian history. Beginning in Lee's childhood, Grass shows the lead-up to the war from a child's vulnerable perspective, detailing how one person experienced the Japanese occupation and the widespread suffering it entailed for ordinary Koreans.

Keum Suk Gendry-Kim emphasizes Lee's strength in overcoming the many forms of adversity she experienced. Grass is painted in a black ink that flows with lavish details of the beautiful fields and farmland of Korea and uses heavy brushwork on the somber interiors of Lee's memories. The cartoonist Gendry-Kim's interviews with Lee become an integral part of Grass, forming the heart and architecture of this powerful nonfiction graphic novel and offering a holistic view of how Lee's wartime suffering changed her. Grass is a landmark graphic novel that makes personal the desperate cost of war and the importance of peace.

From the book's introduction: This is not an introductory text about activated sludge. In this book, we discuss the observation, testing, and calculation procedures that provide data about the status of the activated sludge process. In addition, we discuss in depth how to apply this data to the business of controlling your activated sludge treatment process. Basic activated sludge concepts are addressed in this book in the context of process evaluation and control. We focus our efforts on discussing a basic, practical system of control for the process. The procedures discussed in this manual are equally applicable to all variations. An operator must have information about settleability, dissolved oxygen concentration, solids concentration, effluent quality, and clarifier sludge levels for consistent, efficient process performance of every type of activated sludge process. These procedures are covered in detail. The procedures discussed are based on work done by E. B. Mallory in the 1930's and 40's and further developed by Alfred W. West while he was head of the Operational Technology Branch of the Environmental Protection Agency in the 1960's and 70's. The system, with some modifications by this author, is frequently called the "West Method" or "Sludge Quality Method" of activated sludge process control because operational controls adjustments are based on the sludge quality existing in your facility rather than on arbitrary values.

Table of Contents Introduction Growing Olives Olive Propagation Popular Varieties Table and Mill Olives Soil Conditions Soil Moisture Pruning Harvesting of the Fruit Olives for Taste Extracting Olive Oil Conclusion Author Bio Publisher Introduction If you have been reading the ancient holy books, you may find references to the groves of Olives and flourishing olive trees. Olives have long been a part of human social tradition, and they have been cultivated in gardens since time immemorial. It was believed that olives could not flourish in lands, which were 35 miles away from the sea, because they needed a special type of climate. But that is not really true, because you can grow an olive tree, in a place, where there is plenty of water, where the winters are mild and in areas with Mediterranean climates. The native olive tree – *Olea europaea* – is considered to be a Mediterranean plant, because after all the ancient Romans and the Greeks used olive leaves as an important symbol – especially of peace. Holding out an olive branch meant PAX and not war. Even the gods blessed the olive tree, and allowed it to flourish on their land, making it prosperous through the sale of olives! Archaeological surveys in Jordan on sites going back more than 5000 years have found domesticated olives in abundance. So is it a surprise that a garden without an olive tree would be considered to be incomplete even in those ancient days. Apart from using olives in a diet, olive oil was also used since ancient times for cooking purposes. Apart from that, olive oil was used as a healthy massage oil by Romans, Babylonians, Egyptians, and other ancient civilizations in ancient times. When a new standard is released, somebody has to print it, punch holes and put it in a 3-ring binder. While this is not a big deal for a 5 or 10-page document, many DoD documents are over 400 pages and printing a large document is a time-consuming effort. This United States Army manual, Training Circular TC 3-09.8 Fire Support and Field Artillery Certification and Qualification Change 1 July 2020, provides the standards for implementing a Field Artillery (FA) Certification and Qualification Program which incorporates all components of the FA System within each FA formation at Battalion (BN) and below to include the Fire Support Elements which reside within all Brigade Combat Teams. This TC applies to all FA BNs whether in a Brigade Combat Team, Field Artillery Brigade or separate unit. The objective of the TC is to provide the basic requirements which will result in a safe, technically and doctrinally grounded, task oriented certification and qualification plan which trains our Teams, Crews, Cells, Sections, Platoons, Batteries, and Battalions to provide accurate fires to supported commanders. Field Artillery System requires integrating functions or tasks performed by the critical elements of the unit to provide timely and accurate fires. The Artillery Tables I-VI provide the commander with a systematic means of training, certifying and qualifying sections/crews/teams that are critical to the solution of the gunnery problem. The tables provide training from Military Occupational Specialty qualified individual tasks (Artillery Tables I) through collective training at the FA battalion level (Artillery Tables XVIII). The FA tables provide FA leaders and Soldiers with the "what" and "how" to train utilizing materials that are standard across the Army. This TC provides a training strategy to help all FA units to become as accurate and responsive as possible given any condition in any environment. All FA units strive to achieve first round fire for effect. In order to accomplish this goal an artillery unit must compensate for nonstandard conditions as completely as time and the tactical situation permit. There are five requirements for achieving accurate first-round fire for effect. These requirements are accurate target location and size, accurate firing unit location, accurate weapon and ammunition information, accurate meteorological information, and accurate computational procedures. If these requirements are met, the firing unit will be able to deliver accurate and timely fires in support of the maneuver commander. If the requirements for accurate fire cannot be met completely, the firing unit may be required to use adjust-fire missions to engage targets. Adjust-fire missions can result in reduced effect on the target, increased ammunition expenditure, and greater possibility that the firing unit will be detected

by hostile target acquisition assets.
