

Carl Misch Implantologia Contemporanea

Questo volume, una delle opere più complete nel campo dell'implantologia dentale, inquadra la disciplina implantare ponendola in relazione al più ampio aspetto della clinica medica e delle diverse situazioni che possono riguardare i pazienti candidati a ricevere impianti dentali. Punto fondamentale del pensiero di Carl Misch è il concetto che "la protesi guida le scelte implantari; il risultato finale che si vuole ottenere, in base alle condizioni e alle aspettative del paziente, deve essere, quindi, chiaro e presente all'implantologo prima di iniziare il trattamento. Solo dopo avere deciso il tipo di protesi e le sue caratteristiche è possibile optare per le diverse possibilità terapeutiche, decidendo se eseguire innesti ossei o rigenerazioni e la scelta della tipologia, del numero e della collocazione implantare.

This atlas, featuring numerous superb illustrations and vivid photographs, aims to create a bridge between research and practice in the field of periodontal plastic surgery and cosmetic dentistry with a view to enabling optimal decision making in daily practice. After an opening overview of evidence-based decision making and discussion of treatment planning, subsequent chapters address the surgical treatment of recession-type defects, use of soft tissue substitutes, aesthetic clinical crown lengthening and peri-implant plastic surgery. Illustrated case studies depict application of the described surgical procedures in daily practice and advice is provided on clinical indications and contraindications and basics of the surgical sequence. In addition, critical summaries of the results of systematic reviews are provided. Further chapters consider aspects of multidisciplinary decision-making and present decision trees for soft tissue augmentation procedures proposed by the American Academy of Periodontology. The atlas will be a valuable clinical guide for general dentists and specialists in periodontology/periodontics and implantology.

Eating is defined as the act of taking food into the mouth, chewing and then swallowing it for nourishment. The purpose of this volume is to present a number of up-to-date scientific reviews on the mechanisms involved in the process of eating and to introduce the reader to some of the problems encountered when these complex processes malfunction. Topics include a discussion on the peripheral mechanisms of taste and smell, taste and olfactory processing in the brain and its relation to the control of eating, and a section on mastication with an account of the scientific basis of masticatory disorders. The control mechanisms involved in salivation and swallowing are also extensively reviewed. Because this book reviews the fundamental understanding of the physiological mechanisms involved in eating and includes an insight into the scientific basis of the malfunction of these mechanisms, it will be of equal value to both clinical and basic scientists. In particular, basic and clinical oral biologists and neurophysiologists, dental and medical researchers and postgraduate students will find it a valuable source of information.
