One by one they make a bid for freedom, with tragic consequences. Lorca's tale depicts the repression of women within Catholic Spain in the years before the war. The House of Bernarda Alba is Lorca's last and possibly finest play, completed shortly before he was murdered by Nationalist sympathisers at the outbreak of the Spanish Civil War. Inspired by real characters and described by the author as 'a true record of village life', it is a tragic tale of frustration and explosive passions in a household of women ruled by a tyrannical mother. Edited with invaluable student notes - a must for students of Spanish drama

Based on Stearns's analysis of Muslim and Christian legal, theological, historical, and medical texts in Arabic, Medieval Castilian, and Latin, Infectious Ideas is the first book to offer a comparative discussion of concepts of contagion in the premodern Mediterranean world.

In a crucial shift within posthumanistic media studies, Bernhard Siegert dissolves the concept of media into a network of operations that reproduce, displace, process, and reflect the distinctions fundamental for a given culture. Cultural Techniques aims to forget our traditional understanding of media so as to redefine the concept through something more fundamental than the empiricist study of a medium's individual or collective uses or of its cultural semantics or aesthetics. Rather, Siegert seeks to relocate media and culture on a level where the distinctions between object and performance, matter and form, human and nonhuman, sign and channel, the symbolic and the real are still in the process of becoming. The result is to turn ontology into a domain of all that is meant in German by the word Kultur. Cultural techniques comprise not only self-referential symbolic practices like reading, writing, counting, or image-making. The analysis of artifacts as cultural techniques emphasizes their ontological status as "in-betweens," shifting from first-order to second-order techniques, from the technical to the

artistic, from object to sign, from the natural to the cultural, from the operational to the representational. Cultural Techniques ranges from seafaring, drafting, and eating to the production of the sign-signal distinction in old and new media, to the reproduction of anthropological difference, to the study of trompe-l'oeils, grids, registers, and doors. Throughout, Siegert addresses fundamental questions of how ontological distinctions can be replaced by chains of operations that process those alleged ontological distinctions within the ontic. Grounding posthumanist theory both historically and technically, this book opens up a crucial dialogue between new German media theory and American postcybernetic discourses. The Definitive Guide to File System Analysis: Key Concepts and Hands-on Techniques Most digital evidence is stored within the computer's file system, but understanding how file systems work is one of the most technically challenging concepts for a digital investigator because there exists little documentation. Now, security expert Brian Carrier has written the definitive reference for everyone who wants to understand and be able to testify about how file system analysis is performed. Carrier begins with an overview of investigation and computer foundations and then gives an authoritative, comprehensive, and illustrated overview of contemporary volume and file systems: Crucial information for discovering hidden evidence, recovering deleted data, and validating your tools. Along the way, he describes data structures, analyzes example disk images, provides advanced investigation scenarios, and uses today's most valuable open source file system analysis tools—including tools he personally developed. Coverage includes Preserving the digital crime scene and duplicating hard disks for "dead analysis" Identifying hidden data on a disk's Host Protected Area (HPA) Reading source data: Direct versus BIOS access, dead versus live acquisition, error handling, and more Analyzing

Wireless communications has witnessed a tremendous growth during the past decade and further spectacular enabling technology advances are expected in an effort to render ubiquitous wireless connectivity a reality. Currently, a technical in-depth book on this subject is unavailable, which has a similar detailed exposure of OFDM, MIMO-OFDM and MC-CDMA. A further attraction of the joint treatment of these topics is that it allows the reader to view their design trade-offs in a comparative context. Divided into three main parts: Part I provides a detailed exposure of OFDM designed for employment in various applications Part II is

another design alternative applicable in the context of OFDM systems where the channel quality fluctuations observed are averaged out with the aid of frequency-domain spreading codes, which leads to the concept of MC-CDMA Part III discusses how to employ multiple antennas at the base station for the sake of supporting multiple users in the uplink By providing an all-encompassing self-contained treatment this volume will appeal to a wide readership, as it is both an easy-reading textbook and a high-level research monograph.

Shots rang out in Savannah's grandest mansion in the misty, early morning hours of May 2, 1981. Was it murder or self-defense? For nearly a decade, the shooting and its aftermath reverberated throughout this hauntingly beautiful city of moss-hung oaks and shaded squares. John Berendt's sharply observed, suspenseful, and witty narrative reads like a thoroughly engrossing novel, and yet it is a work of nonfiction. Berendt skillfully interweaves a hugely entertaining first-person account of life in this isolated remnant of the Old South with the unpredictable twists and turns of a landmark murder case. It is a spellbinding story peopled by a gallery of remarkable characters: the well-bred society ladies of the Married Woman's Card Club; the turbulent young redneck gigolo; the hapless recluse who owns a bottle of poison so powerful it could kill every man, woman, and child in Savannah; the aging and profane Southern belle who is the "soul of pampered self-absorption"; the uproariously funny black drag queen; the acerbic and arrogant antiques dealer; the sweet-talking, piano-playing con artist; young blacks dancing the minuet at the black debutante ball; and Minerva, the voodoo priestess who works her magic in the graveyard at midnight. These and other

Savannahians act as a Greek chorus, with Berendt revealing the alliances, hostilities, and intrigues that thrive in a town where everyone knows everyone else. *Midnight in the Garden of Good and Evil* is a sublime and seductive reading experience. Brilliantly conceived and masterfully written, this enormously engaging portrait of a most beguiling Southern city has become a modern classic.

The volume containing 50 full-page working drawings and 200 detail sketches, fully covers the whole subject of spar construction and rig of nineteenth and twentieth century Sailing Ships. The book is a historical fiction. This means that the characters are fictional as are their exploits, but the story line is based on historical fact. Most people are unaware that during WWII, Nazi Germany had an operational aircraft carrier, the Graf Zeppelin. Had the Graf Zeppelin sortied with Bismarck, Tirpitz, and Prinz Eugen into the Atlantic in 1939, the entire outcome of the war could have been changed. However, due to an ongoing feud between Hermann Gring and Admiral Erich Raeder, the carrier was not allowed aircraft and she sat out the war as an ineffective white elephant. Gnther Schmidt is assigned the task of obtaining intelligence on the

US Navy, specifically about carrier aviation. He places a young frulein, Karen Berr, in a girls college in Pensacola, Florida, where she meets a naval pilot, LTJG John Parker and falls in love, subsequently marrying him. Hermann Gring hates the Kriegsmarine with a passion, and Gnther embarrasses him in front of Hitler, thus becoming a personal enemy. Gnther is targeted by Gring for assassination. Gring, who is in charge of aircraft production, makes the decision to prevent the Kriegsmarine from having navalized aircraft. Gnther is tasked with training pilots for the German Navy in landing techniques for carriers. He sets up a clandestine training facility at Greifswald on the Baltic, flying brightly colored aircraft to misdirect Grings goons.

Subsequently, Gnther becomes involved in advising German naval designers in the development of an aircraft carrier. Gring tries to have Gnther assassinated but fails, only killing his wife, Gertrude. Gring hosts a big military bash and brags to Japans ambassador, Baron Hiroshi Oshima, about Germanys plan for world conquest. Oshima sends a report via the oceanic cable to Japan, unaware that the American Navy has broken the diplomatic code and are reading these messages. The transcripts are codenamed Magic. The Spanish Civil War erupts, giving Gnther and his newly trained pilots on-the-job training. Gnther helps Messerschmitt in developing the Bf 109T naval fighter and a dive bomber, the Ju 87 G. Gring tries again to assassinate Gnther and fails. Gnther, using misdirection, manages to have the naval aircraft manufactured and hidden from Gring. World War II erupts and Gnther sails into combat on the Graf Zeppelin as her CAG when she sorties with Tirpitz, Bismarck, and Prinz Eugen. German dive bombers from the Graf Zeppelin sink two British cruisers in the Denmark Strait and assist in sinking the Hood and Prince of Wales. The German flotilla is attacked by British torpedo airplanes, which loses all but one due to the intervention of the Bf 109T fighters.

Tirpitz is hit by several torpedoes and must retire. The American Coast Guard Cutter, Modoc, is attacked by German dive bombers, thus bringing America into the war. The German flotilla joins up with Gneisenau and Scharnhorst to begin decimating the convoys. An American flotilla, including Washington and Ranger, intervenes. The resulting battle ends with the destruction of the German flotilla. Gnter is captured by the Americans.

During the 1920s and 1930s Adm. Joseph Mason Reeves (1878–1948) emerged as the most important flag officer in American naval aviation. He took command of the U.S. Navy's nascent carrier arm during a critical period and, imagining the aircraft carrier's possibilities as an offensive weapon, transformed it from a small auxiliary command in support of the battle line into a powerful strike force that could attack far in advance of the fleet. All the Factors of Victory is the first full-length biography of this eminent naval officer, whose story makes an important contribution to our understanding of not only the development of carrier warfare but also how interservice rivalries and the development of new technologies affected the Navy's mission.

The latest volume covers the hugely important American carrier of the Second World War. Built in larger numbers than any fleet carrier before or since, the Essex class can claim to be the US Navy's most significant weapon in the defeat of Japan. Carrying up to 100 aircraft and capable of absorbing enormous punishment (not one was sunk), they spearheaded the Fast Carrier Task Forces for most of the Pacific War.??The heavily illustrated work contains everything a modeller needs to know about this prolific class.

Taking us through a day in the life of another community hero, I'm a Police Officer shows readers what it's like to be a policewoman protecting and serving the citizens of Tinyville Town, a cozy community where the people are kind, everyone says hello when they're walking down the street, and all the townsfolk do their part to keep things running smoothly. Brian Biggs' read-aloud Tinyville Town series launched in 2016 with three books: the world-establishing picture book Gets to Work! and two board books, I'm a Veterinarian and I'm a Firefighter. In addition to I'm a Police Officer, it has grown to include the board book I'm a Librarian and a second picture book, Time for School! With a nod to the busy world of Richard Scarry and the neighborhood feel of Sesame Street, the Tinyville Town series has become a favorite read for preschoolers. Using bold, comic-influenced art to illustrate a growing, thriving, diverse city full of interesting people, these books are ideal for story time and class discussions about occupations and community helpers. Aircraft Carriers of the World is the first comprehensive reference work to detail in one volume the 360 plus carriers designed or projected by the world's navies. This has detailed narratives tracing the origin and evolution of the aircraft carrier as a viable fighting unit. Times are changing and the labor markets are under immense burden from the collective effects of various megatrends. Technological growth and grander incorporation of economies along with global supply chains have been an advantage for several workers armed with high skills and in growing occupations. However, it is a challenge for workers with low or obsolete skills in diminishing zones of employment. Business models that are digitalized hire workers as self-employed instead of standard employees. People seem to be working and living longer, but they experience many job changes and the peril of skills desuetude. Inequalities in both quality of job and

earnings have increased in several countries. The depth and pace of digital transformation will probably be shocking. Industrial robots have already stepped in and artificial intelligence is making its advance too. Globalization and technological change predict the great potential for additional developments in labor market performance. But people should be ready for change. A progression of creative annihilation is probably under way, where some chores are either offshored or given to robots. A better world of for jobs cannot be warranted – a lot will be contingent on devising the right policies and institutes in place.
