This full-color administrative medical assisting textbook is part of a dynamic learning system that includes a free skills CD-ROM bound to the text, workbook, and instructor-support materials. Together, these learning tools integrate essential and advanced competencies set forth by the AAMA's Role Delineation study, emphasizing interpersonal communications and changes in the health care setting including Standard Precautions and managed care. The text is written not by just one or two individuals, but by many talented experts who provide students with a thorough understanding of administrative medical assisting fundamentals. The entire learning system is complemented by "real-life" characters and scenarios from the field of medical assisting--a feature not found in any other text! This is a textbook for college and university classes in discipline-based composition. Grounded in contemporary genre theory, this text provides practical ideas about how to develop a sophisticated research paper. It respectfully addresses undergraduate students as apprentice scholars, thus departing from journalistic approaches to composition. Designs for Disciplines contains ample instructional commentary, and is also a reader. In most cases, discussion

material in each chapter is supplemented by a selection of sample essays. ICD-10: A COMPREHENSIVE GUIDE fully prepares current and future medical coders for the transition to ICD-10-CM and PCS coding systems that will go into effect on October 1, 2013. This comprehensive guide covers both ICD-10-CM and ICD-10-PCS coding, highlighting changes in terminology, functionality, guidelines, and conventions. Whether you need to understand and review the impact the transition will have on the industry, or if you need to learn to assign ICD-10 codes accurately, ICD-10: A Comprehensive Guide will prepare your students for the road ahead. The Clinical Decision Making series is the most ambitious attempt to bridge the gap between content knowledge and clinical application. Clinical Decision Making: Case Studies in Pediatrics recognizes that numerous considerations, or variables, factor into making nursing decisions. This book contains 40 pediatric case histories and questions, based on real life client situations, which make learning easier and more memorable than a textbook discussion or lecture based on textbook content. Every case contains an introductory "blueprint" of variables that must be considered while evaluating that particular scenario, which are

pertinent concerning the client, nursing protocol, and setting of care. Examples of these variables include the client's age, gender, or culture, the client with a pre-existing condition, legal issues, or communication skills. Each blueprint is different, just as each clinical situation is unique. By simulating the actual decision-making process, learners gain a comfort level to make informed clinical judgments that will help them become successful nurses. Quite simply, Clinical Decision Making shortens the distance between the classroom and nursing practice like never before.

Reflecting the latest practices in the field, *Clinical Decision Making: Case Studies in Medical-Surgical Nursing*, 2nd edition bridges the gap between classroom knowledge and clinical application. Emphasizing holistic nursing care, this resource helps nursing students sharpen their critical thinking skills and gain experience applying what they have learned. The more than 40 medical-surgical case histories and related questions, and responses are based on real-life client situations. Every case contains an introductory blueprint of variables that must be considered while evaluating a particular scenario concerning the client, nursing protocol, and setting of care. Each blueprint and

case is different, just as each clinical situation is unique. As learners simulate the actual decision-making process, they gain valuable experience making informed clinical judgments that will help them become successful nurses. Categorized by complexity, the book appeals to a broad range of learning levels and styles. What role can resources that go beyond text play in the development of moral education in law schools and law firms? How can these resources - especially those from the visual and performing arts - nourish the imagination needed to confront the ethical complexities of particular situations? This book asks and answers these questions, thereby introducing radically new resources for law schools and law firms committed to fighting against the moral complacency that can all too often creep into the life of the law. The chapters in this volume build on the companion volume, *The Arts and the Legal Academy*, also published by Ashgate, which focuses on the role of non-textual resources in legal education generally. Concentrating in particular on the moral dimension of legal education, the contributors to this volume include a wide range of theorists and leading legal educators from the UK and the US.

Welcome to the leading text in surgical technology the most up-to-date, the most

trusted, and the most comprehensive. **SURGICAL TECHNOLOGY FOR THE SURGICAL TECHNOLOGIST: A POSITIVE CARE APPROACH**, Fourth Edition is your trusted source for comprehensive foundational surgical technology information. Can you keep a secret? Maybe you can, but the United States government cannot. Since the birth of the country, nations large and small, from Russia and China to Ghana and Ecuador, have stolen the most precious secrets of the United States. Written by Michael Sulick, former director of CIA's clandestine service, *Spying in America* presents a history of more than thirty espionage cases inside the United States. These cases include Americans who spied against their country, spies from both the Union and Confederacy during the Civil War, and foreign agents who ran operations on American soil. Some of the stories are familiar, such as those of Benedict Arnold and Julius Rosenberg, while others, though less well known, are equally fascinating. From the American Revolution, through the Civil War and two World Wars, to the atomic age of the Manhattan Project, Sulick details the lives of those who have betrayed America's secrets. In each case he focuses on the motivations that drove these individuals to spy, their access and the secrets they betrayed, their tradecraft or techniques for concealing their espionage, their exposure and punishment, and the damage they ultimately inflicted on America's national security. *Spying in America* serves as the perfect introduction to the early history of espionage in America. Sulick's unique experience as a senior intelligence officer is evident as he skillfully guides the reader through these cases of intrigue, deftly illustrating the evolution of American awareness about

espionage and the fitful development of American counterespionage leading up to the Cold War.

Entrepreneurship is a phenomenon of tremendous societal importance. It is also an elusive phenomenon, and researching entrepreneurship is therefore fun, fascinating—and frustrating at times. In *Researching Entrepreneurship*, one of the most highly recognized entrepreneurship scholars shares in a personal and readable way his rich experience and ideas on how entrepreneurship can or should be researched. After a comprehensive treatment of entrepreneurship as societal phenomenon and scholarly domain, the core chapters of the book discuss design, sampling, operationalization and analysis issues on several levels of analysis: individual, venture, firm, industry, region and nation. The author provides numerous examples of problems and solutions from real research projects, as well as experienced-based suggestions for further improvements in future work. The book is targeted primarily at doctoral students and other (relative) newcomers to the field of entrepreneurship research. However, taking a fresh, reflective perspective and looking beyond research conventions, it should provide potential for inspiration and food for thought also for experienced entrepreneurship researchers. Moreover, while the examples are taken from entrepreneurship research, the book provides a unique "experienced empirical researcher" (rather than "textbook

method expert") treatment of issues that are of equal relevance across the social sciences. This goes for topics such as the role of theory; qualitative vs. quantitative research; validity checking; statistical inference, and replication. Per Davidsson is Professor in Entrepreneurship at Brisbane Graduate School of Management, QUT, Australia, and Jönköping International Business School, Sweden. He is also Chair of the Research Committee of the Entrepreneurship Division of the (American) Academy of Management.

Surgical technology educators and students previously had no choice but to rely on textbooks written for OR nurses that often contained too little information on the role of the surgical technologist and not enough of the subtle observations and nuances that come from years in the field. Until now. *Surgical Technology for the Surgical Technologist* is the first text for surgical technology students and faculty that is precise, focused and helpful. Information is presented in a thorough and consistent manner that encourages student learning of both the information and the process. The writers' 50 years of expertise in the field give *Surgical Technology for the Surgical Technologist* a depth not found in other texts. (KEYWORDS: Surgical Technology, technologist, OR, Nurses, operating)

Meet and exceed educational requirements and expectations for Paramedic training with The Professional Paramedic Series. Based on the new National EMS Education Standards, this

economical three-volume series equips you and your learners with the resources necessary for both paramedic certification and re-certification. Comprehensive, using a case-based methodology, while remaining street-friendly, each volume in the series walks learners through the skills and concepts critical to the job of a Paramedic. The framework of each book is practical in approach: introducing principles, skills and terminology; presenting a typical case; walking through critical response steps; and again reviewing key concepts to ensure understanding for successful application on the job. Volume III: Trauma Care & EMS Operations highlights special response considerations and a broad range of operational medical topics to prepare readers with the complete spectrum of knowledge required to succeed as a Paramedic. Topics include traumatic brain injury, environmental medicine, specialty care transport, triage systems, and much more. This book follows up on the fundamental information covered in Volume I: Foundations of Paramedic Care and the application of skills in emergency situations in Volume II: Medical Emergencies, Maternal Health & Pediatrics. Practical and reader-friendly, each volume includes a full color design with detailed photos, graphics and step-by-step skill sequences to ensure your learners are fully prepared for the responsibilities, adventures, and challenges of the paramedic profession. The Evidence-based Practice Workbook is an ideal tool for use by GPs, medical specialists and other healthcare professionals to learn the concepts of evidence-based practice (EBP). Practical and interactive, this workbook provides simple methods to help health professionals find and use the best evidence to answer clinical questions, developing their skills in: asking

clinical questions searching for answers discriminating good from poor information and research using the answers to make clinical decisions. This attractive, colour workbook provides a clear explanation of EBP skills and concepts. Written by internationally respected authors, this expanded and updated edition has been developed from evidence-based practice workshops run by the Centre for Evidence-Based Medicine at the University of Queensland and Oxford, and contains information and exercises to help health professionals learn how to use EBP in their clinical practice.

This is the second volume of the two-volume set (CCIS 617 and CCIS 618) that contains extended abstracts of the posters presented during the 18th International Conference on Human-Computer Interaction, HCII 2016, held in Toronto, Canada, in July 2016. The total of 1287 papers and 186 posters presented at the HCII 2016 conferences was carefully reviewed and selected from 4354 submissions. These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. The papers thoroughly cover the entire field of Human-Computer Interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas. The papers included in this volume are organized in the following topical sections: web, social media and communities; gesture and motion-based interaction; expressions and emotions recognition and psychophysiological monitoring; technologies for learning and creativity; health applications; location-based and navigation applications; smart environments and the Internet of Things; design and evaluation case studies.
