From clean drinking water, to seat belts, to immunizations, the impact of public health on every individual is undeniable. For undergraduates, an understanding of the foundations of public health is an essential step toward becoming an educated citizen. Public Health 101 provides a big-picture, population perspective on the determinants of health and disease and the tools available to protect and promote health. It examines the full range of options for intervention including use of the healthcare system, the public health system, and society-wide systems such as laws and taxation.

The Neurology of Eye Movements provides clinicians with a synthesis of current scientific information that can be applied to the diagnosis and treatment of disorders of ocular motility. Basic scientists will also benefit from descriptions of how data from anatomical, electrophysiological, pharmacological, and imaging studies can be directly applied to the study of disease. By critically reviewing such basic studies, the authors build a conceptual framework that can be applied to the interpretation of abnormal ocular motor behavior at the bedside. These syntheses are summarized in displays, new figures, schematics and tables. Early chapters discuss the visual need and neural basis for each functional class of eye movements. Two large chapters deal with the evaluation of double vision and systematically evaluate how many disorders of the central nervous system affect eye movements. This edition has been extensively

rewritten, and contains many new figures and an up-to-date section on the treatment of abnormal eye movements such as nystagmus. A major innovation has been the development of an option to read the book from a compact disc, make use of hypertext links (which bridge basic science to clinical issues), and view the major disorders of eye movements in over 60 video clips. This volume will provide pertinent, up-to-date information to neurologists, neuroscientists, ophthalmologists, visual scientists, otalaryngologists, optometrists, biomedical engineers, and psychologists.

747 is the thrilling story behind "the Queen of the Skies"—the Boeing 747—as told by Joe Sutter, one of the most celebrated engineers of the twentieth century, who spearheaded its design and construction. Sutter's vivid narrative takes us back to a time when American technology was cutting-edge and jet travel was still glamorous and new. With wit and warmth, he gives an insider's sense of the larger than life-size personalities—and the tensions—in the aeronautical world.

Now back in print after 25 years: A small but unusually exhaustive collection of magical texts

from some of the most important ancient Egyptian manuals and stelae, translated and organized by the renowned Dutch Egyptologist J.F. Borghouts.

This publication is a most comprehensive, richly-documented dictionary which presents, in local Arabic dialects and in mostly assimilated Judaeo-Yemeni dialects, the natural, geo-political, economic, and socio-cultural history of Muslim Yemen. It is also an account of the religious inter- and intra-socio-cultural and economic everyday life of the ancient Jewish communities who lived as dhimm's under Muslim rule until their mass emigration to Israel in 1948, leaving behind 5,000 co-religionists. The dictionary is based on about 300 printed and ms sources painstakingly consulted in various libraries all over the world, and many Yemeni language informants now residing in Israel. The text of every single item is adduced, mostly in context, with reference to ms., or book, page, line, or note, and to classical and foreign etymologies. Particular attention has been paid to the dictionaries of Lane and Dozy. This is a milestone in Arabic lexicography, complementing Dozy's "Supplement aux dictionnaires arabes," and opening up a complete new area sorely missing in the field of Arabic Studies.
