

## Catalogue Smith System

The first published catalogue of a fossil collection arranged using a stratigraphic system, first published in 1817.

This book, first published in 1987, is an attempt to explain Adam Smith's theory of property. The author examines Smith's theory in the context of *The Wealth of Nations*, and explores what Smith said, what he really meant, and what can be logically deduced from it. This title will be of interest to students of economic thought.

John Phillips and the Business of Victorian Science  
Routledge

The two-hundredth anniversary in 1976 of the publication of *An Inquiry into the Nature and Causes of the Wealth of Nations* emphasized the already evident new interest in the relationship between Smith's social and political thought and his economic theory. Only recently have economists turned their attention to Smith's other works, long overshadowed by the more renowned *The Wealth of Nations*. Martha Lightwood here argues that *A Theory of Moral Sentiments* actually laid the philosophic groundwork for *The Wealth of Nations* and emphasizes that Smith's writings, considered in their totality,

represent a compelling interest not solely in economics but in philosophy and the study of society. Selected for this bibliography are major contributions and representative studies on three aspects of Smith's work: moral philosophy, the history of the development of scientific methodology, and political economy.

More than 775 models of Smith & Wesson guns produced since 1857 are listed according to model and year of manufacture with updated prices in up to five grades of condition. Includes a range of serial numbers for each year of manufacture. This is the most comprehensive list of Smith & Wesson products and prices available.

John Phillips was one of the most remarkable and important scientists of the Victorian period. Orphaned at the age of seven and brought up by his uncle, he rose to hold a number of highly prestigious posts within the British academic and scientific community, despite lacking a university education. By the time of his death in 1874 he was widely regarded as one of the pioneers and champions of the science of geology, yet until now there has been no full length biography of Phillips. In rectifying this lacuna, Jack Morrell has produced a meticulous and magisterial piece of scholarship that does justice to the achievements and legacy of John Phillips.

Adopting a broadly chronological approach, the book not only traces the development of Phillips's career but clarifies and highlights his role within Victorian culture, shedding light on many wider themes. It explores how Phillips' love of science was inseparable from his need to earn a living and develop a career which could sustain him. Hence questions of power, authority, reputation and patronage were central to Phillips's career and scientific work. Drawing on a wealth of primary sources and a rich body of recent writings on Victorian science, this biography provides a fascinating and compelling

account of John Phillips and his legacy. Pulling together his personal story with the scientific theories and developments of the day, and fixing them firmly within the context of wider society, this biography will be vital reading for anyone with an interest in the history of British and nineteenth-century science.
