Implementing Cisco IP Routing (ROUTE) Foundation Learning Guide is a Cisco authorized, self-paced learning tool for CCNP preparation. This book teaches readers how to design, configure, maintain, and scale routed networks that are growing in size and complexity. The book covers all routing principles covered in the CCNP Implementing Cisco IP Routing course. As part of the Cisco Press Self-Study series, Implementing Cisco IP Routing (ROUTE) Foundation Learning Guide provides comprehensive foundation learning for the CCNP ROUTE exam. This

revision to the popular Foundation Learning Guide format for Advanced Routing at the Professional level is fully updated to include complete coverage of all routing topics covered in the new Implementing Cisco IP Routing (ROUTE) course. The proposed book is an intermediate-level text, which assumes that readers have been exposed to beginner-level networking concepts contained in the CCNA (ICND1 and ICND2) certification curriculum. No previous exposure to the CCNP level subject matter is required, so the book provides a great deal of detail on the topics covered. Each chapter opens with a list of objectives to help focus the reader's study. Configuration exercises at the end of each chapter and a master lab exercise that ties all the topics together in the last chapter help illuminate theoretical concepts. Key terms will be highlighted and defined throughout. Each chapter will conclude with a summary to help review key concepts, as well as review questions to reinforce the reader's understanding of what was covered.

The Cisco CCNA certification is considered one of the most valued in the field of networks and communications worldwide. It proves that its holders have the necessary knowledge to perform each of the functions carried out by a network administrator. In addition, it acts as an access requirement for more prestigious certifications, such as the CCNP. This book contains the official Cisco agenda required to obtain the CCNA and, as a result, the reader will acquire the necessary skills to design, manage and secure a medium-sized corporate network, as well as the capacity for analysis and resolution of incidents when necessary. To achieve this purpose, the work is divided into 7 chapters, through which they are analyzed from the most basic concepts, such as TCP / IP and OSI, to advanced protocols. It is a mostly practical approach, where all configuration is applied to Cisco devices. The main objective of this book is to provide its readers with the necessary knowledge to get prepared for the CCNA certification exam. All theory is accompanied by examples and practical configuration assumptions in the required subjects. We recommended you use the "Packet tracer" application, developed by Cisco. If you are interested in advancing your career, get started today! The market is full of books that claim to have a magic formula to educate you on the concepts of Cisco CCNA. They write long descriptions and praise their own ability to summarize a sea in a teacup. I do not have tall claims to make. I do not claim that this book will change your life overnight. I do not claim that this book will make you learn and digest the entire study material in a week. A diamond takes time to be what we see in the markets. Fruit takes time to ripen before we can eat it. In the same manner, this book will run its course of time before you are fully prepared for the exam. The Cisco CCNA certification is not easy. You will have to sweat and burn your blood before you can learn the commands to get ready for the exam. I have made sure that the book encompasses all the possible topics you might be looking out for. This book will give you details on all the topics in a comprehensive and easy-to-digest manner. The book contains the following topics among others. A detailed overview of Cisco Devices Commands for the configuration of routers Networking concepts Routing concepts Deciphering RIP, EIGRP, and IGRP Open Shortest Path Protocol

(OSPF)Configuration of Switch

Covers the objectives of the CCNA INTRO exam and provides review questions, scenario-based exercises, and a testing engine found on the companion CD-ROM.

The Cisco CCNA is one of the most widely recognised and respected qualifications in the IT industry. Every year, tens of thousands of people embark towards taking the exam via private study, Cisco Academy courses, or online training. The sad truth is most students quit along the way, and for those few who actually do attempt it, only 50% pass. All that time, effort, and money wasted! If there are so many manuals, CBT courses, lab simulators, exam engines, and study resources out there, then what goes wrong? This is the question Cisco trainer Paul Browning wanted to get to the bottom of. After interviewing thousands of students, he discovered that most people quit because they are simply overwhelmed with the sheer volume of material they need to digest and, of course, the large number of hands-on skills they need to be able to demonstrate in the exam. Add to that the day-to-day stresses of commuting to work, bringing up a family, and the distraction of everyday problems and challenges; it's no wonder people quit. This is where Cisco CCNA in 60 Days can help. Devised by two industry experts and countless Cisco students just like you, the 60-day programme breaks down every exam requirement into a daily study task. All you need to do is open the book at the relevant day (from 1 to 60), read the theory, and complete the lab. Every lesson is reviewed several times in the form of exam questions, review sessions, a handy exam cram guide, and, of course, hands-on labs for you to follow. You can choose to take the CCENT after the first 30 days and the ICND2 after the next 30 days, or you can take the CCNA after 60 days of study. Here is what is included in your study guide: 60 daily study tasks Full explanations of theory Real-world tips and advice Over 47 hands-on labs, plus 15 bonus CCENT and ICND2 labs CCENT and ICND2 cram guides Bonus VLSM guide Motivational goal-setting guide

He took an interest in IT at an early age and soon developed a passion for computer networking, which made him study hard in order to reach an expert level. Technical author Dario Barinic is a network expert (dual CCIE #25071 - Routing and Switching, and Service Provider) with a Master of Engineering degree and eight years of experience in the networking field. He also holds other certifications, such as Cisco CCNA and CCNP, HP AIS, ASE, MASE, and various Cisco specialisations.
