Taking us back to a time that is half history, half myth and wholly magical, bestselling author Chitra Banerjee Divakaruni gives voice to Panchaali, the fire-born heroine of the Mahabharata, as she weaves a vibrant retelling of an ancient epic saga. Married to five royal husbands who have been cheated out of their father's kingdom, Panchaali aids their quest to reclaim their birthright, remaining at their side through years of exile and a terrible civil war. Both in science and in practical affairs we reason by combining facts only inconclusively supported by evidence. Building on an abstract understanding of this process of combination, this book constructs a new theory of epistemic probability. The theory draws on the work of A. P. Dempster but diverges from Dempster's viewpoint by identifying his "lower probabilities" as epistemic probabilities and taking his rule for combining "upper and lower probabilities" as fundamental. The book opens with a critique of the well-known Bayesian theory of epistemic probability. It then proceeds to develop an alternative to the additive set functions and the rule of conditioning of the Bayesian theory: set functions that need only be what Choquet called "monotone of order of infinity." and Dempster's rule for combining such set functions. This rule, together with the idea of "weights of evidence," leads to both an extensive new theory and a better understanding of the Bayesian theory. The book concludes with a brief treatment of statistical inference and a discussion of the limitations of epistemic probability. Appendices contain mathematical proofs, which are relatively elementary and seldom depend on mathematics more advanced than the binomial theorem.
