The fate of inventors and patentees today is far worse than it was for Robert Kearns—the inventor of the intermittent windshield wiper whose story was portrayed in the movie, *A Flash of Genius*. Mr. Kearns battled automotive infringers for years on end. His wife divorced him. He became estranged from his children. He was placed in a mental hospital. Eventually he prevailed. But Mr. Kearns “only” had to battle infringers. Today, an inventor’s battles to uphold and enforce his patent would include resistance from infringers. The Patent Trial and Appeal Board. District courts. The Federal Circuit. The Supreme Court. State attorneys general. Congress. The executive branch. Even if a resilient patentee recovers damages, the media will cast this “patent troll” as a scourge on society. In *Plight of the Patentee*, you will read stories about inventors waiting more than a decade for their patent applications to grant. You will meet dozens of inventors who have suffered from flagrant infringement.

Liability Partnership Law effective from 1st April 2009 is a new business vehicle that provides the benefits of limited liability of a company but allows its partners the flexibility of organizing their internal management on the basis of a mutually arrived agreement. The new concept of LLP is gaining strength in India. Procedures for LLP compliance have changed since 2009. Taxation of LLP has been made clear by the provisions made in the Income-tax Act, 1961 through the Finance (No 2) Act 2009 and Finance Act, 2010. An attempt has been made in this book to analyze the provisions of Limited Liability Partnership Act, Rules and its taxation keeping in mind the practical difficulties, which a business entity/professional could face while adhering to the provisions contained in laws. Tables, charts and examples have been used sparingly to make the provisions understand easily. Book would be immensely useful for Company Secretaries, Law professionals, Chartered Accountants and everyone concerned with formation, incorporation, conversion, administration & management, accounting & audit and taxation of a LLP.

Corporate finance and corporate strategy have long been seen as different sides of the same coin. Though both focus on the same broad problem, investment decision-making, the gap between the two sides--and between theory and practice--remains embarrassingly large. This book synthesizes cutting-edge developments in corporate finance and related fields--in particular, real options and game theory--to help bridge this gap. In clear, straightforward exposition and through numerous examples and applications from various industries, Han Smit and Lenos Trigeorgis set forth an extended valuation framework for competitive strategies. The book follows a problem-solving approach that synthesizes ideas from game theory, real options, and strategy. Thinking in terms of options-games can help managers address questions such as: When is it best to invest early to preempt competitive entry, and when to wait? Should a firm compete in R&D or adopt an accommodating stance? How does one value growth options or infrastructure investments? The authors provide a wide range of valuation examples, such as acquisition strategies, R&D investment in high-tech sectors, joint research ventures, product introductions in consumer electronics, infrastructure, and oil exploration investment. Representing a major step beyond standard real options or strategy analysis, and extending the power of real options and strategic thinking in a rigorous fashion, *Strategic Investment* will be

Inhaltsangabe:Abstract: This paper deals with the valuation of property in a global context and discusses contemporary and evolving issues that might affect property valuation standards and practice in Germany and in the United Kingdom. It shows the need, the development and the growing acceptance of International Valuations Standards (IVS) published by the International Valuations Standards Committee and identifies valuations for financial reporting as the key driving force behind the ambition of harmonising valuation standards.

Additionally, the major differences between valuation standards and practice in Germany and the UK are examined, the interrelationship between and the discussion about three concurring set of standards (namely Red Book, Blue Book and White Book) is presented and the importance of Market Value as the central underlying definition of value is highlighted. Then the parallel development of International Accounting Standards (IAS) and their adoption within the European Union from 2005 onwards is explained and it is shown that this reinforces the position and the acceptance of IVS. Furthermore, the major differences between IAS, German and UK Generally Accepted Accounting Practice regarding the treatment of real estate are shown and the possible consequences for the valuation of fixed assets are derived. Also the New Basel Capital Accord (Basel II) which determines the way how banks have to allocate capital is identified as another area of interest for the valuation profession. For this reason the methodology of Basel II is explained briefly and the problems and consequences regarding the treatment and valuation of real estate that evolve out of an application of Basel II are explored. Finally, other areas of interest that might determine the future of property valuation are addressed, notably the issue of sustainability. It is shown that there are numerous benefits of sustainable buildings, that the client demand for them is rising and that valuers will have to

consider this aspect because it will affect the Market Value of the property. In sum, this paper shows that there are fundamental differences in the way how the German and the UK valuation scene is acting to cope up with these developments on the international scene, i.e., the UK valuers and the RICS are acting proactive and are at the forefront of new developments (the fact that the RICS based their new Red Book mainly on IVS is the best example), while in contrast [...]

Why do some start-ups attract large investments while others do not? Aswath Damodaran, finance professor and experienced investor, argues that the power of story drives corporate value, adding substance to numbers and persuading even cautious investors to take risks. In business, there are the storytellers who spin compelling narratives and the number-crunchers who construct meaningful models and accounts. Both are essential to success, but only by combining the two, Damodaran argues, can a business deliver and sustain value. Through a range of case studies, *Narrative and Numbers* describes how storytellers can better incorporate and narrate numbers and how number-crunchers can calculate more imaginative models that withstand scrutiny. Damodaran considers Uber's debut and how narrative is key to understanding different valuations. He investigates why Twitter and Facebook were valued in the billions of dollars at their public offerings, and why one (Twitter) has stagnated while the other (Facebook) has grown. Damodaran also looks at more established business models such as Apple and Amazon to demonstrate how a company's history can both enrich and constrain its narrative. And through Vale, a global Brazil-based mining company, he shows the influence of external narrative, and how country, commodity, and currency can shape a company's story. *Narrative and Numbers* reveals the benefits, challenges, and pitfalls of weaving narratives around numbers and how one can best test a story's plausibility.
