The Cessna 172 Training Manual is a detailed guide to the popular Cessna 172 aircraft. The book provides straight forward easy to understand explanations of the aircraft systems, flight operations, and performance, illustrated with a variety of photographs, diagrams, schematics and tables. The information has been compiled from a vast number of engineering manuals and operating handbooks for the C172 series, and from the authors' in depth personal experience as commercial pilots, instructors and examiners on the aircraft. The book is ideal for type transition training or for learning to fly, as a supplement to the information provided by a qualified flight instructor, and a companion to a structured training program through an approved provider. Experienced pilots will also find useful tips and information to improve their flight standards, and the book is a great instructional aid for C172 instructors. The book is aimed at Cessna 172 pilots, however enthusiasts, virtual pilots, and engineers can also enjoy the information provided. Other books available in the series: Cessna 152 Training Manual Cessna 182 Training Manual Cessna 206 Training Manual Cessna 210 Training Manual About the Authors: Both authors are professional pilots, with a variety of experience from military jets to airliners. Both have experience as charter pilots on a variety of Cessna aircraft, and are also qualified instructors and examiners on the Cessna single engine aircraft they write about. The Federal Aviation Administration (FAA) has published the Private Pilot - Airplane Airman Certification Standards (ACS)

document to communicate the aeronautical knowledge, risk management, and flight proficiency standards for the private pilot certification in the airplane category, single-engine land and sea; and multiengine land and sea classes. This ACS incorporates and supersedes the previous Private Pilot Practical Test Standards for Airplane, FAA-S-8081-14. The FAA views the ACS as the foundation of its transition to a more integrated and systematic approach to airman certification. The ACS is part of the safety management system (SMS) framework that the FAA uses to mitigate risks associated with airman certification training and testing. Specifically, the ACS, associated guidance, and test question components of the airman certification system are constructed around the four functional components of an SMS: Safety Policy that defines and describes aeronautical knowledge, flight proficiency, and risk management as integrated components of the airman certification system; Safety Risk Management processes through which internal and external stakeholders identify and evaluate regulatory changes, safety recommendations and other factors that require modification of airman testing and training materials; Safety Assurance processes to ensure the prompt and appropriate incorporation of changes arising from new regulations and safety recommendations; and Safety Promotion in the form of ongoing engagement with both external stakeholders (e.g., the aviation training industry) and FAA policy divisions. The FAA has developed this ACS and its associated guidance in collaboration with a diverse group of aviation training experts. The goal is to drive a systematic approach to all components of the airman certification system, including knowledge test question development and conduct of the practical test. The FAA acknowledges and appreciates the many hours that these aviation experts have contributed toward this goal. This level of collaboration, a
