Aircraft Financing and Leasing: Tools for Success in Aircraft Acquisition and Management provides researchers, industry professionals and students with a thorough overview of the skills necessary for navigating this dynamic field. The book details the industry's foundational concepts, including aviation law and regulation, airline credit analysis, maintenance reserves, insurance, transaction cost modeling, risk management tools, such as fuel hedging, and the art of lease negotiations. Different types of aircraft are explored, highlighting their purposes, as well as when and why airline operators choose specific models over others. In addition, the book also covers important factors, such as maintenance reserve development, modeling financial returns for leased aircraft, and appraising aircraft values. Most chapters feature detailed case studies, applying concepts to actual industry circumstances. Users will find this an ideal resource for practitioners or as an outstanding reference for senior undergraduate and graduate students. There is an increasing emphasis in aeronautical engineering on design. Concentrating on large scale commercial jet aircraft, this textbook reflects areas of growth in the aircraft industry and the procedures and practices of civil aviation design.

Transport for Tourism provides a novel and stimulating assessment of the effects of tourism travel and the challenge this poses for transport planners, providers and policy makers in the 1990s. Unique in addressing the relationship between transport and tourism at an introductory level, the book covers key topics such as the role of government policy, supply and demand relationships, quality control systems, health and sustainability, and environmental impact. A range of international case studies--including transport in Bermuda, Singapore airways, British airways and Japanese transport systems--provide insight into these issues. The interdisciplinary approach ensures a holistic treatment of this important topic.
