Bestselling author Alice Hoffman tears a page from history and melds it with mysticism to create a spellbinding, highly acclaimed tale about the persecution of Jewish people during the sixteenth century. Estrella is a Marrano: During the time of the Spanish Inquisition, she is one of a community of Spanish Jews living double lives as Catholics. And she is living in a house of secrets, raised by a family who practices underground the ancient and mysterious way of wisdom known as kabbalah. When Estrella discovers her family's true identity--and her family's secrets are made public--she confronts a world she's never imagined, where new love burns and where friendship ends in flame and ash, where trust is all but vanquished and betrayal has tragic and bitter consequences. Winner of numerous "best book" citations and infused with the rich context of history and faith, *Incantation* is a transcendent journey of discovery and loss, rebirth and remembrance that Newbery Award-winning author Lois Lowry described as "Magical and spellbinding...Painful and exquisitely beautiful."

timeless classic. With refreshingly new illustrations. If you have ever asked, "how did the camel get his hump?" If you have ever wondered, "how did the leopard get his spots?" Then you are a very special kind of curious person who will love the answers in these books.

Chemistry and chemical engineering have changed significantly in the last decade. They have broadened their scope—into biology, nanotechnology, materials science, computation, and advanced methods of process systems engineering and control—so much that the programs in most chemistry and chemical engineering departments now barely resemble the classical notion of chemistry. Beyond the Molecular Frontier brings together research, discovery, and invention across the entire spectrum of the chemical sciences—from fundamental, molecular-level chemistry to large-scale chemical processing technology. This reflects the way the field has evolved, the synergy at universities between research and education in chemistry and chemical engineering, and the way chemists and chemical engineers work together in industry. The astonishing developments in science and engineering during the 20th century have made it possible to dream of new goals that might previously have been considered unthinkable. This book identifies the key opportunities and challenges for the chemical sciences, from basic research to societal needs and from terrorism defense to environmental protection, and it looks at the ways in which chemists and chemical engineers can work together to contribute to an improved future.

**NATIONAL BESTSELLER** • In this extraordinary book, the world's most extraordinary distance swimmer writes about her emotional and spiritual need to swim and about the almost mystical act of swimming itself. Lynne Cox trained hard from age nine, working with an Olympic coach, swimming five to twelve miles each day in the Pacific. At age eleven, she swam even when hail made the water "like cold tapioca pudding" and was told she would one day swim the English Channel. Four years later—not yet out of high school—she broke the men's and women's world records for the Channel swim. In 1987, she swam the Bering Strait from America to the Soviet Union—a feat that, according to Gorbachev, helped diminish tensions between Russia and the United States. Lynne Cox's relationship with the water is almost mystical: she describes swimming as flying, and remembers swimming at night through flocks of flying fish the size of mockingbirds, remembers being escorted by a pod of dolphins that came to her off New Zealand. She has a photographic memory of her swims. She tells us how she conceived of, planned, and trained for each, and re-creates for us the experience of swimming (almost) unswimmable bodies of water,

including her most recent astonishing one-mile swim to Antarctica in thirty-two-degree water without a wet suit. She tells us how, through training and by taking advantage of her naturally plump physique, she is able to create more heat in the water than she loses. Lynne Cox has swum the Mediterranean, the three-mile Strait of Messina, under the ancient bridges of Kunning Lake, below the old summer palace of the emperor of China in Beijing. Breaking records no longer interests her. She writes about the ways in which these swims instead became vehicles for personal goals, how she sees herself as the lone swimmer among the waves, pitting her courage against the odds, drawn to dangerous places and treacherous waters that, since ancient times, have challenged sailors in ships.

When wealthy Brittany Ellis and Alex Fuentes, a gang member from the other side of town, develop a relationship after Alex discovers that Brittany is not exactly who she seems to be, they must face the disapproval of others.
