This book traces the epic clash of values between traditional scenery-and-tourism management and emerging ecological concepts in the national parks, America's most treasured landscapes. It spans the period from the creation of Yellowstone National Park in 1872 to near the present, analyzing the management of fires, predators, elk, bear, and other natural phenomena in parks such as Yellowstone, Yosemite, Grand Canyon, and Great Smoky Mountains.

Updates for many countries have made it possible to estimate hunger in the world with greater accuracy this year. In particular, newly accessible data enabled the revision of the entire series of undernourishment estimates for China back to 2000, resulting in a substantial downward shift of the series of the number of undernourished in the world. Nevertheless, the revision confirms the trend reported in past editions: the number of people affected by hunger globally has been slowly on the rise since 2014. The report also shows that the burden of malnutrition in all its forms continues to be a challenge. There has been some progress for child stunting, low birthweight and exclusive breastfeeding, but at a pace that is still too slow. Childhood overweight is not improving and adult obesity is on the rise in all regions. The report complements the usual assessment of food security and nutrition with projections of what the world may look like in 2030, if trends of the last decade continue. Projections show that the world is not on track to achieve Zero Hunger by 2030 and, despite some progress, most indicators are also not on track to meet global nutrition targets. The food security and nutritional status of the most vulnerable population groups is likely to deteriorate further due to the health and socio economic impacts of the COVID-19 pandemic. The report puts a spotlight on diet quality as a critical link between food security and nutrition. Meeting SDG 2 targets will only be possible if people have enough food to eat and if what they

are eating is nutritious and affordable. The report also introduces new analysis of the cost and affordability of healthy diets around the world, by region and in different development contexts. It presents valuations of the health and climate-change costs associated with current food consumption patterns, as well as the potential cost savings if food consumption patterns were to shift towards healthy diets that include sustainability considerations. The report then concludes with a discussion of the policies and strategies to transform food systems to ensure affordable healthy diets, as part of the required efforts to end both hunger and all forms of malnutrition.

In 1789 the West Indian colony of San Domingo supplied two-thirds of the overseas trade of France. The entire structure of what was arguably the most profitable colony in the world rested on the labour of half a million slaves. In 1791 the waves of unrest inspired by the French Revolution reached across the Atlantic dividing the loyalties of the white population of the island. The brutally treated slaves of Saint Domingo seized at this confusion and rose up in rebellion against masters. In this classic work, CLR James chronicles the only successful slave revolt in history and provides a critical portrait of their leader, Toussaint L'Ouverture, 'one of the most remarkable men of a period rich in remarkable men'.

As the importance and dependence of specific mineral commodities increase, so does concern about their supply. The United States is currently 100 percent reliant on foreign sources for 20 mineral commodities and imports the majority of its supply of more than 50 mineral commodities. Mineral commodities that have important uses and face potential supply disruption are critical to American economic and national security. However, a mineral commodity's importance and the nature of its supply chain can change with time; a mineral commodity that may not have been considered critical 25 years ago may be critical today, and one considered critical today may not be so in the future. The U.S. Geological Survey has produced this volume to describe a select group of mineral commodities currently critical to our economy and security. For each mineral commodity covered, the authors provide a comprehensive look at (1) the commodity's use; (2) the geology and global distribution of the mineral deposit types that account for the present and possible future supply of the commodity; (3) the current status of production, reserves, and resources in the United States and globally; and (4) environmental considerations related to the commodity's production from different types of mineral deposits. The volume describes U.S. critical mineral resources in a global context, for no country can be self-sufficient for all its mineral commodity needs, and the United States will always rely on global mineral commodity supply chains. This volume provides the scientific understanding of critical mineral resources required for informed decisionmaking by those responsible for ensuring that the United States has a secure and sustainable supply of mineral commodities.

Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Satisfying consumer needs through the production of healthy and nutritious agricultural

products is a substantial challenge facing modern agriculture. However, agricultural production should be carried out with care for plant health, biological safety of products, and environmental safety while minimizing the risks to human health. Therefore, the implementation of agricultural practices while respecting these principles is very important for improving the quantity and quality of crops. Additionally, ecosystems have been altered as a result of human activities and climate change, resulting in the reduction of biodiversity and creation of new niches where pests can thrive. This is of particular importance in 2020, as the United Nations General Assembly declared this year as the International Year of Plant Health (IYPH), with “protecting plants, protecting life” as a leading subject. This Special Issue promotes the subject of plant health and emphasize the importance of preventing the spread of pests, including weeds, which cause substantial economic losses. Research articles cover topics related to the biology and harmfulness of weeds, particularly in connection with crop health, segetal weed communities and their biodiversity, and integrated methods of weed control. For this Special Issue, we welcome all types of articles, including original research, opinions, and reviews.

Barron's, 5-Steps and the others are great resources for reviewing at the end of the year, but Tamm's Textbook Tools workbooks accompany students all year long. They are filled with assignments that follow the regular text throughout the year, all 30 chapters. They can also be used as reviews. All you need is the textbook, physical or online. Teachers can copy at will, and parents can use the book as a student consumable. The rationale for having this workbook is that publishers now put so much of their extra content online, traditional classwork is left lacking. No matter if the textbook itself is written in ink or electrons, many students still find it valuable to write and keep notes for themselves on paper, and portfolios still matter. The activities in this workbook challenge students to apply the concepts, give examples, diagram every chapter, and think things through with the authors. The smell of sweet cinnamon on your morning oatmeal, the gentle heat of gingerbread, the sharp piquant bite from your everyday peppermill. The tales these spices could tell: of lavish Renaissance banquets perfumed with cloves, and flimsy sailing ships sent around the world to secure a scented prize; of cinnamon-dusted custard tarts and nutmeg-induced genocide; of pungent elixirs and the quest for the pepper groves of paradise. The Taste of Conquest offers up a riveting, globe-trotting tale of unquenchable desire, fanatical religion, raw greed, fickle fashion, and mouthwatering cuisine—in short, the very stuff of which our world is made. In this engaging, enlightening, and anecdote-filled history, Michael Krondl, a noted chef turned writer and food historian, tells the story of three legendary cities—Venice, Lisbon, and Amsterdam—and how their single-minded pursuit of spice helped to make (and remake) the Western diet and set in motion the first great wave of globalization. In the sixteenth and seventeenth centuries, the world's peoples were irrevocably brought together as a result of the spice trade. Before the great voyages of discovery, Venice controlled the business in Eastern seasonings and thereby became medieval Europe's most cosmopolitan urban center. Driven to dominate this trade, Portugal's mariners

pioneered sea routes to the New World and around the Cape of Good Hope to India to unseat Venice as Europe's chief pepper dealer. Then, in the 1600s, the savvy businessmen of Amsterdam "invented" the modern corporation—the Dutch East India Company—and took over as spice merchants to the world. Sharing meals and stories with Indian pepper planters, Portuguese sailors, and Venetian foodies, Krondl takes every opportunity to explore the world of long ago and sample its many flavors. The spice trade and its cultural exchanges didn't merely lend kick to the traditional Venetian cookies called peverini, or add flavor to Portuguese sausages of every description, or even make the Indonesian rice table more popular than Chinese takeout in trendy Amsterdam. No, the taste for spice of a few wealthy Europeans led to great crusades, astonishing feats of bravery, and even wholesale slaughter. As stimulating as it is pleasurable, and filled with surprising insights, *The Taste of Conquest* offers a fascinating perspective on how, in search of a tastier dish, the world has been transformed. With a New Chapter and Updated Epilogue on Coronavirus A Financial Times Best Health Book of 2019 and a New York Times Book Review Editors' Choice "Honigsbaum does a superb job covering a century's worth of pandemics and the fears they invariably unleash." —Howard Markel, MD, PhD, director of the Center for the History of Medicine, University of Michigan How can we understand the COVID-19 pandemic? Ever since the 1918 Spanish influenza pandemic, scientists have dreamed of preventing such catastrophic outbreaks of infectious disease. Yet despite a century of medical progress, viral and bacterial disasters continue to take us by surprise, inciting panic and dominating news cycles. In *The Pandemic Century*, a lively account of scares both infamous and less known, medical historian Mark Honigsbaum combines reportage with the history of science and medical sociology to artfully reconstruct epidemiological mysteries and the ecology of infectious diseases. We meet dedicated disease detectives, obstructive or incompetent public health officials, and brilliant scientists often blinded by their own knowledge of bacteria and viruses—and see how fear of disease often exacerbates racial, religious, and ethnic tensions. Now updated with a new chapter and epilogue.

Young adulthood - ages approximately 18 to 26 - is a critical period of development with long-lasting implications for a person's economic security, health and well-being. Young adults are key contributors to the nation's workforce and military services and, since many are parents, to the healthy development of the next generation. Although 'millennials' have received attention in the popular media in recent years, young adults are too rarely treated as a distinct population in policy, programs, and research. Instead, they are often grouped with adolescents or, more often, with all adults. Currently, the nation is experiencing economic restructuring, widening inequality, a rapidly rising ratio of older adults, and an increasingly diverse population. The possible transformative effects of these features make focus on young adults especially important. A systematic approach to understanding and responding to the unique circumstances and needs of today's young adults can help to pave the way to a more productive and equitable tomorrow for young adults in particular and our society at large.

Investing in The Health and Well-Being of Young Adults describes what is meant by the term young adulthood, who young adults are, what they are doing, and what they need. This study recommends actions that nonprofit programs and federal, state, and local agencies can take to help young adults make a successful transition from adolescence to adulthood. According to this report, young adults should be considered as a separate group from adolescents and older adults. Investing in The Health and Well-Being of Young Adults makes the case that increased efforts to improve high school and college graduate rates and education and workforce development systems that are more closely tied to high-demand economic sectors will help this age group achieve greater opportunity and success. The report also discusses the health status of young adults and makes recommendations to develop evidence-based practices for young adults for medical and behavioral health, including preventions. What happens during the young adult years has profound implications for the rest of the life course, and the stability and progress of society at large depends on how any cohort of young adults fares as a whole. Investing in The Health and Well-Being of Young Adults will provide a roadmap to improving outcomes for this age group as they transition from adolescence to adulthood.

In *A Short History of the United States*, National Book Award winner Robert V. Remini offers a much-needed, concise history of our country. This accessible and lively volume contains the essential facts about the discovery, settlement, growth, and development of the American nation and its institutions, including the arrival and migration of Native Americans, the founding of a republic under the Constitution, the emergence of the United States as a world power, the outbreak of terrorism here and abroad, the Obama presidency, and everything in between. This book will serve as a primer for both laboratory and field scientists who are shaping the emerging field of molecular epidemiology. Molecular epidemiology utilizes the same paradigm as traditional epidemiology but uses biological markers to identify exposure, disease or susceptibility. Schulte and Perera present the epidemiologic methods pertinent to biological markers. The book is also designed to enumerate the considerations necessary for valid field research and provide a resource on the salient and subtle features of biological indicators. In *Critique of Black Reason* eminent critic Achille Mbembe offers a capacious genealogy of the category of Blackness—from the Atlantic slave trade to the present—to critically reevaluate history, racism, and the future of humanity. Mbembe teases out the intellectual consequences of the reality that Europe is no longer the world's center of gravity while mapping the relations among colonialism, slavery, and contemporary financial and extractive capital. Tracing the conjunction of Blackness with the biological fiction of race, he theorizes Black reason as the collection of discourses and practices that equated Blackness with the nonhuman in order to uphold forms of oppression. Mbembe powerfully argues that this equation of Blackness with the nonhuman will serve as the template for all new forms of exclusion. With *Critique of Black Reason*, Mbembe offers nothing less than a map of the world as it has been constituted through colonialism and racial thinking while providing the first glimpses of a more just future.
