Merriam Press Aviation History 8 First Edition (2013) Mike Bonchonsky tried to enlist in the Army Air Corps in 1942 but was turned down. Three months later the Air Corps drafted him, training him as an armorer. After stateside training, he was assigned to the 17th Bomb Group, serving with them through combat in North Africa, Sicily, Italy, France and Germany during World War II. As an armorer in the unit, Mike's responsibilities included maintaining and repairing all manner of weapons, from small arms to aircraft machine guns and cannons, as well as their associated equipment, and was also tasked with loading bombs and other ordnance carried by the aircraft. Mike also provides details of life on an airbase, working and living in harsh conditions, with the threat of enemy attack always present. Also included is an appendix with a brief history of the 17th Bomb Group. In addition to photos from Mike's personal album, dozens of photos of the Martin B-26 Marauder medium bomber and their crews, and photos of ground crews at work, aircraft on missions, and bomb runs and strike and post-strike photos. 99 photos 1 drawing A middle school physical science textbook complete with a video of the power point lessons, links to experiments, and a flash card review. This is volume two of a planned three-volume set. Volume one covers the scientific method, matter and energy. Volume two covers physics (motion, gravity, pressure, etc) Volume three will cover chemistry. This is intended to be a middle school level physical science textbook, but it is not written as one. It is easy to understand and funny. It is not only targeted at a middle school student but sounds like one wrote it. A lot of immature examples are used, kids like this. This is not your normal textbook, it is fun to read, but includes all the vocabulary and complex ideas. The current textbooks are full of boring information but they are useless if no one wants to actually read them. A student will want to read this one, so will an adult. It explains in easy language, complex topics. There are links to demonstrations, experiments, simulations, videos, and funny examples of science. This book is written to make physical science fun, as all science should be. Normally a textbook is written so the teacher can make a lesson from it, this one is the opposite. These are my lessons converted into a textbook. I know the lessons and examples work, so the textbook should also. Since this is an e-book it also includes links to my power point lessons (in video form), links to videos, demonstrations, and simulations. There are a lot of links in each chapter. This is self-published book designed to be an affordable online textbook for middle school or home school children. Volume two includes motion, forces and physics. Unit 6 - Motion Chapter 19 - relative motion center Chapter 20 - speed Chapter 21 velocity Chapter 22 - acceleration Unit 7 - Forces Chapter 23 - Force Chapter 24 - Simple machines Chapter 25 Newton's first law of motion Chapter 26 Newton's second law of motion Chapter 27 Newton's third law of motion Chapter 28 Law of conservation of momentum Unit 8 - Types of force Chapter 29 - The law of universal Gravitation Chapter 30 - falling objects Chapter 31 - Gravity in the solar system Chapter 32 - space Chapter 33 - friction Chapter 34 - pressure Chapter 35 - fluids Chapter 36 - pressure in fluids Chapter 37 - pressure in gases Chapter 38 - Buoyancy and Archimedes principle Chapter 39 - Bernoulli's principle Chapter 40 - hydraulics Pascal's principle

A limited number of additional footnotes is included, but only what is felt necessary for a basic understanding of the story and the grammar. Some more detailed footnotes have been taken from Conington's edition of the Aeneid.

But when World War II began, the athlete became an airman, embarking on a journey that led to a doomed flight on a May afternoon in 1943. When his Army Air Forces bomber crashed into the Pacific Ocean, against all odds, Zamperini survived, adrift on a foundering life raft. Ahead of Zamperini lay thousands of miles of open ocean, leaping sharks, thirst and starvation, enemy aircraft, and, beyond, a trial even greater. Driven to the limits of endurance, Zamperini would answer desperation with ingenuity; suffering with hope, resolve, and humor; brutality with rebellion. Preparing students to be active, informed, literate citizens is one of the primary functions of public schools. But how can students become engaged citizens if they can't read, let alone understand, their social studies texts? What can educators--and social studies teachers in particular--do to help students develop the knowledge, skills, and motivation to become engaged in civic life? Building Literacy in Social Studies addresses this question by presenting both the underlying concepts and the research-based techniques that teachers can use to engage students and build the skills they need to become successful readers, critical thinkers, and active citizens. The authors provide targeted strategies--including teaching models, graphic organizers, and step-by-step instructions--for activities such as * Building vocabulary, * Developing textbook literacy skills, * Interpreting primary and secondary sources, * Applying critical thinking skills to newspapers and magazines, and * Evaluating Internet sources. Readers will also learn how to organize classrooms into models of democracy by creating learning communities that support literacy instruction, distribute authority, encourage cooperation, and increase accountability among students. Realistic scenarios depict a typical social studies teacher's experience before and after implementing the strategies in the classroom, showing their potential to make a significant difference in how students respond to instruction. By making literacy strategies a vital part of content-area instruction, teachers not only help students better understand their schoolwork but also open students' eyes to the power that informed and engaged people have to change the world.

"REA: the test prep AP teachers recommend."

In this volume, Marvin A. Sweeney builds upon his former work Form and Intertextuality in Prophetic and Apocalyptic Literature (FAT 45, 2005). He introduces further studies that take up several key issues, including the reading of prophetic books in their final literary form and the significance of textual versions for this reading. He also observes the intertextual relationships between the prophets and other works of biblical and post-biblical literature, and the reception of the prophetic books. Following an introduction that lays out methodological perspective, it includes the title essay for the volume, Reading Prophetic Books, as well as selections of papers devoted to Isaiah, Jeremiah in both its Masoretic and Septuagint forms, Ezekiel, individual books from the Twelve Prophets, and the reading of biblical texts in Qumran, Rabbinic, and Targumic literature.
