Following a spate of high-profile financial scandals (including Enron, WorldCom, and Parmalat), the quality of financial information has come under increasing scrutiny. Many of the accounting standards being imposed on the profession by regulators and standard-setting bodies are now attracting criticism from the business community and the accountancy profession itself. In this book, Anthony Rayman traces a fundamental flaw in the conventional academic wisdom back to the nineteenth century, and proposes an alternative conceptual framework. He argues that

This book explains how True Cost Accounting is an effective tool we can use to address the pervasive imbalance in our food system. Calls are coming from all quarters that the food system is broken and needs a radical transformation. A system that feeds many yet

continues to create both extreme hunger and diet-related diseases, and one which has significant environmental impacts, is not serving the world adequately. This volume argues that True Cost Accounting in our food system can create a framework for a systemic shift. What sounds on the surface like a practice relegated to accountants is ultimately a call for a new lens on the valuation of food and a new relationship with the food we eat, starting with the reform of a system out of balance. From the true cost of corn, rice and water, to incentives for soil health, the chapters economically compare conventional and regenerative, more equitable farming practices in and food system structures, including taking an unflinching look at the true cost of cheap labour. Overall, this volume points towards the potential for our food system to be more human-centred than profit-centred and one that has a more respectful relationship to the planet. It sets forth a path forward based on True Cost Accounting for food. This path seeks to fix our current food metrics, in policy and in practice, by applying a holistic lens that evaluates the actual costs and benefits of different food systems, and the impacts and dependencies between natural systems, human systems, agriculture and food systems. This volume is essential reading for professionals and policymakers involved in developing and reforming the food system, as well as students and scholars working on food policy, food systems and sustainability. For undergraduate or MBA-level managerial accounting courses. An essential tool for understanding how to make effective economic decisions. In today's troubled

economy, it's important to show students how managerial decisions can affect business costs. Overall, this text describes both theory and common practices in a way that will help students produce information that's useful in day-to-day decision-making. The fifth edition includes new and revised material on real-businesses and ethics.
