Prose Poetry An Introduction Princeton University Press

An engaging and authoritative introduction to an increasingly important and popular literary genre Prose Poetry is the first book of its kind—an engaging and authoritative introduction to the history, development, and features of English-language prose poetry, an increasingly important and popular literary form that is still too little understood and appreciated. Poets and scholars Paul Hetherington and Cassandra Atherton introduce prose poetry's key characteristics, chart its evolution from the nineteenth century to the present, and discuss many historical and contemporary prose poems that both demonstrate their great diversity around the Anglophone world and show why they represent some of today's most inventive writing. A prose poem looks like prose but reads like poetry: it lacks the line breaks of other poetic forms but employs poetic techniques, such as internal rhyme, repetition, and compression. Prose Poetry explains how this form opens new spaces for writers to create riveting works that reshape the resources of prose while redefining the poetic. Discussing prose poetry's precursors, including William Wordsworth and Walt Whitman, and prose poets such as Charles Simic, Russell Edson, Lydia Davis, and Claudia Rankine, the book pays equal attention to male and female prose poets, documenting women's essential but frequently unacknowledged contributions to the genre. Revealing how prose poetry tests boundaries and challenges conventions to open up new imaginative vistas, this is an essential book for all readers, students, teachers, and writers of prose poetry.

Alex Sareyan's *The Turning Point* is the most comprehensive chronicle of contributions made by conscientious objectors (COs) who volunteered for service in America's mental hospitals and state institutions for the developmentally disabled during World War II. The Civilian Public Service (CPS) mental hospital experience triggered the most significant crusade on behalf of the mentally ill that has occurred in this country.

Describes methods for formulating models of the metabolic and physiological processes of microorganisms from a mathematical perspective. The models used--biodegradation, individual cellular functions and environmental cycles--are practical, mathematical tools that enable researchers to predict and control microorganism behavior. The focus is on their behavior in the natural environment, with mixed populations of microorganisms and heterogeneous substrates.

Basic statistical definitions and theorems. Subspaces and projections. Properties of the multivariate and spherical normal distributions. Introduction to linear models. A sufficient statistic. Estimation. Tests about the mean. Simultaneous confidence intervals - Scheffé type. Tests about the variance. Asymptotic validity of procedures under nonnormal distributions. James-Stein

and Ridge estimators. Inference based on the studentized range distribution and Bonferroni's inequality. The generalized linear model. The repeated measures model. Random effects and mixed models. The correlation model. The distribution theory for multivariate analysis. The multivariate one- and two-sample models - inference about the mean vector. The multivariate linear model. Discriminant analysis. Testing hypotheses about the covariance matrix. Simplifying the structure of the covariance matrix. This is an exploration of the diverse ways that corporations affect the practices and structures of the global political economy. The text addresses fundamental questions such as: How can the corporation be most usefully conceptualized within the field of IPE? Arms control: The cooperative pursuit of security. - - 3.
