The second edition of Dr. Demski's book reflects his experiences teaching undergraduates, masters and doctoral students. He emphasizes economic fundamentals as the guiding foundation coupled with an artful application of those fundamentals. This applies to product costing, decision making and evaluation art. Dr. Demski has also removed a great deal of traditional minutiae, in order to keep this theme in constant focus. This thematic approach, in his experience, works in dramatic fashion, and stands in sharp contrast to more traditional presentations of this material. The book is not only for use as a textbook but also as a reference book.

This Global edition has been designed specifically to meet the needs of international financial accounting students. The text successfully implements a real-world, single focus company approach in every chapter. The companies chosen are engaging and the decision-making focus shows the relevance of financial accounting in the real world. In addition to the latest examples of both contemporary and traditional topics, new material has been added to make the content more relevant and improve learning outcomes for the international student.

This book presents national environmental, or 'green' accounting as it has developed in Europe and other parts of the world. It introduces the most recent methods developed through the United Nations Statistical Department and other international organizations, but bridges the gap between the superficial treatment of environmental accounting in economics textbooks and environmental literature, on the one hand, and the highly technical manuals of international organizations, on the other. Joy Hecht begins with a history and introduction to national income accounting. The first part of her book explains how the environmental accounts build on the structure of the 1993 System of National Accounts. She then shows the UN approach to accounting applied to pollution, recycling, and the management of natural resources such as forests, minerals, and fisheries. The third section discusses how the accounts approach green GDP and other macroeconomic indicators. The book concludes by going beyond the UN structures to discuss other adjusted macroeconomic measures and how accounting data can be used to build them. National Environmental Accounting is a non-technical introduction to an increasingly important field. It is a must-read for anyone interested in how environmental accounts can help society move towards greater sustainability.
