A popular version of history trumpets the United States as a diverse "nation of immigrants," welcome to all. The truth, however, is that local communities have a long history of ambivalence toward new arrivals and minorities. Persistent patterns of segregation by race and income still exist in housing and schools, along with a growing emphasis on rapid metropolitan development (sprawl) that encourages upwardly mobile families to abandon older communities and their problems. This dual pattern is becoming increasingly important as America grows more diverse than ever and economic inequality increases. Two recent trends compel new attention to these issues. First, the geography of race and class represents a crucial litmus test for the new "regionalism"—the political movement to address the linked fortunes of cities and suburbs. Second, housing has all but disappeared as a major social policy issue over the past two decades. This timely book shows how unequal housing choices and sprawling development create an unequal geography of opportunity. It emerges from a project sponsored by the Civil Rights Project at Harvard University in collaboration with the Joint Center for Housing Studies and the Brookings Institution. The contributors—policy analysts, political observers, social scientists, and urban planners—document key patterns, their consequences, and how we can respond, taking a hard look at both successes and failures of the past. Place still matters, perhaps more than ever. High levels of segregation shape education and job opportunity, crime and insecurity, and long-term economic prospects. These problems cannot be addressed effectively if society assumes that segregation will take care of itself. Contributors include William Apgar (Harvard University), Judith Bell (PolicyLink), Angela Glover Blackwell (PolicyLink), Allegra Calder (Harvard), Karen Chapple (Cal-Berkeley), Camille Charles (Penn), Mary Cunningham (Urban Institute), Casey Dawkins (Virginia Tech), Stephanie DeLuca (Johns Hopkins), John Goering (CUNY), Edward Goetz (U. of Minnesota), Bruce Katz (Brookings), Barbara Lukermann (U. of Minnesota), Gerrit Knaap (U. of Maryland), Arthur Nelson (Virginia Tech), Rolf Pendall (Cornell), Susan J. In *Muddying the Waters*, Richa Nagar uses stories, encounters, and anecdotes as well as methodological reflections, to grapple with the complexity of working through solidarities, responsibility, and ethics while involved in politically engaged scholarship. Experiences that range from the streets of Dar es Salaam to farms and development offices in North India inform discussion of the labor and politics of co-authorship, translation and genre blending in research and writing that cross multiple--and often difficult--borders, Nagar links the implicit assumptions, issues, and questions involved with scholarship and political action, and explores the epistemological risks and possibilities of creative research that brings these into intimate dialogue. Daringly self-conscious, *Muddying the Waters* reveals a politically engaged research and writer working to become "radically vulnerable," and on the ways a focus on such radical vulnerability could allow a re-imagining of collaboration that opens new avenues to collective dreaming and laboring across sociopolitical, geographical, linguistic, and institutional borders.

'Gunnar Törnqvist, one of the world's most distinguished economic geographers, can fairly claim to have discovered the notion of the geography of creativity over thirty years ago. This remarkable book summarises his immensely original and important research on the subject, which now dominates the geographical literature. It is the book that the world has been waiting for him to publish.' Sir Peter Hall, University College London, UK 'This book offers a comprehensive perspective on the salience of context in fostering or hindering creativity. After several decades of research and teaching, Gunnar Törnqvist has become a foremost authority on the subject. Here, his elegant conceptual overview is complemented by a methodologically-innovative scrutiny of career journeys, including those of Nobel Prize laureates. *The Geography of Creativity* will be warmly welcomed by not only cultural geographers, but also by scholars in various fields of social science and humanities.' Anne Buttmer, University College Dublin, Ireland What is creativity and who exactly is creative? In this insightful and highly readable book, Gunnar Törnqvist attempts to answer these questions by arguing that geographical millieux are hotbeds for creativity and renewal places where pioneers in art, technology and science have gathered and developed their special abilities. In light of ongoing social and economic transformations, special attention is paid to the institutional settings in firms and universities. The goal is to identify those features which facilitate and those which impede the creative process. Individual lives are illustrated through the autobiographies of hundreds of Nobel Laureates. Their life paths reveal the importance of geographic mobility and contact patterns for the development of creativity and international prestige. From these biographies we can also see how local millieux and schools have influenced many scientists. *The Geography of Creativity* will be of great benefit to academics and students in regional science, economic geography and economics.

GIS and the Social Sciences offers a uniquely social science approach on the theory and application of GIS with a range of

modern examples. It explores how human geography can engage with a variety of important policy issues through linking together GIS and spatial analysis, and demonstrates the importance of applied GIS and spatial analysis for solving real-world problems in both the public and private sector. The book introduces basic theoretical material from a social science perspective and discusses how data are handled in GIS, what the standard commands within GIS packages are, and what they can offer in terms of spatial analysis. It covers the range of applications for which GIS has been primarily used in the social sciences, offering a global perspective of examples at a range of spatial scales. The book explores the use of GIS in crime, health, education, retail location, urban planning, transport, geodemographics, emergency planning and poverty/income inequalities. It is supplemented with practical activities and datasets that are linked to the content of each chapter and provided on an eResource page. The examples are written using ArcMap to show how the user can access data and put the theory in the textbook to applied use using proprietary GIS software. This book serves as a useful guide to a social science approach to GIS techniques and applications. It provides a range of modern applications of GIS with associated practicals to work through, and demonstrates how researcher and policy makers alike can use GIS to plan services more effectively. It will prove to be of great interest to geographers, as well as the broader social sciences, such as sociology, crime science, health, business and marketing.

The main purpose of this Handbook is to provide overviews and assessments of the state-of-the-art regarding research methods, approaches and applications central to economic geography. The chapters are written by distinguished researchers from a variety of disciplines. Understanding World Regional Geography (UWRG) is a course designed to teach students to think and apply geographic concepts long after the course is over. Author Erin Fouberg draws from her expertise in geography education and research in student learning to create a product that has a strong pedagogical framework designed to engage students and deepen their understanding of the world by having them “DO” Geography. UWRG includes features that help students learn to read cultural and physical landscapes, ask geographic questions, apply geographic concepts, and make connections. It integrates 25 threshold concepts and teaches students how geographers apply these concepts and asks them to apply these concepts themselves. This enables them to grasp the complexities of the world and provides them with the knowledge and thinking skills necessary to understand it. UWRG is the first introductory course to integrate ESRI ArcGIS Online thematic maps, enabling students to engage with course materials, see patterns, and answer geographic questions.

Ideal for students of architectural technology, this volume of the Technologies of Architecture series covers the technologies available and the processes necessary for the conservation of existing buildings and environments. This book provides, in a single text, the tools for students to be able to evaluate such buildings, as well as an extensive understanding of the mechanisms which cause their deterioration and knowledge of the technologies available to correct their status. The ever higher standards set for buildings, especially in energy conservation contexts, demand that practitioners appreciate how the performance of existing structures can be enhanced, which is also covered. As political, economic, and environmental issues increasingly spread across the globe, the science of geography is being rediscovered by scientists, policymakers, and educators alike. Geography has been made a core subject in U.S. schools, and scientists from a variety of disciplines are using analytical tools originally developed by geographers. Rediscovering Geography presents a broad overview of geography's renewed importance in a changing world. Through discussions and highlighted case studies, this book illustrates geography's impact on international trade, environmental change, population growth, information infrastructure, the condition of cities, the spread of AIDS, and much more. The committee examines some of the more significant tools for data collection, storage, analysis, and display, with examples of major contributions made by geographers. Rediscovering Geography provides a blueprint for the future of the discipline, recommending how to strengthen its intellectual and institutional foundation and meet the demand for geographic expertise among professionals and the public.
