This Special Issue of Cancers (Basel) is mainly dedicated to selecting papers from the talks given during the first Joint Meeting on Lung Cancer (JMLC) between the MD Anderson Cancer Center (Houston, Texas USA) and the Hospital University Federation (HUF) OncoAge (University Côte d'Azur, Nice, France) (Nice, September 2018). The central theme of JMLC is to discuss new advances and exchange ideas regarding lung cancer. Notably, the talks covered different topics on new therapeutic strategies (targeted therapy and immuno-oncology), molecular and cellular biology, biomarkers, and the epidemiology of lung cancer. Special attention was also given to lung cancer in elderly patients. The articles published in this Special Issue covered subjects such as the assessment of new biomarkers and new approaches for the early detection of lung cancer, epidemiological data, and emphasized a place for the newly characterized cellular pathways in lung cancer, which opens room for therapeutic perspectives for lung cancer patients.

This biology extension file includes teaching notes, guidance on coursework activities and equipment. For the first two years of her life Kari Herbert lived with her mother and father, the explorer Sir Wally Herbert, among the Inuit people in the vast snowy wastes of the High Arctic. Her first words were Inuktun, her first friends the children of hunters and the pull of the place and its people lured the family back several times during her childhood. Then in 2002 she returned to the Arctic alone. She met her childhood friends again, remembered the exhilaration of sledging with dogs across the ice and remembered the language and faces of her early years. She also encountered alarming changes: the uneasy coexistence of modern life and ancient traditions, and of the hopes and tragedy at the heart of this extraordinary and yet deeply familiar community. place of family memories and of savage beauty, where her friends still hunt and eat whale meat; and where she rediscovers a compelling world where light and darkness dominate life.

The bibliography volume of the three-volume East Looks West: East European Travel Writing in Europe collates travel writing published in book form by east Europeans travelling in Europe from ca. 1550 to 2000. It is intended as a fundamental research tool, collecting together travel writings within each national/linguistic tradition, and enabling comparative analysis of such material. It fills an important gap in the existing reference literature, both in western and east European languages, and will be of use to those working in the growing fields of comparative travel writing, regional and national identities, and postcolonialism. These texts exist in surprisingly large numbers, and include writings of high literary quality as well as of historical interest, but they have been relatively little studied as a genre. Much of this material is rare and difficult to find, even in national libraries. As a result, there are few bibliographical surveys of the literature of east European travel and self-representation, and none that are region-wide or comparative in scope. This is the third volume of a three-part set of East Looks West, Vol. 1 - An Anthology of East European Travel Writing on Europe; and Vol. 2 - A Comparative Introduction to East European Travel Writing on Europe.

The 5th edition of the VECPAR series of conferences marked a change of the conference title. The full conference title now reads VECPAR 2002 — 5th International Conference on High Performance Computing for Computational Science. This reflects more accurately what has been the main emphasis of the conference since its early days in 1993 – the use of computers for solving problems in science and engineering. The present postconference book includes the best papers and invited talks presented during the three days of the conference, held at the Faculty of Engineering of the University of Porto (Portugal), June 26–28 2002. The book is organized into 8 chapters, which as a whole appeal to a wide research community, from those involved in the engineering applications to those interested in the actual details of the hardware or software implementation, in line with what, in these days, tends to be considered as Computational Science and Engineering (CSE). The

book comprises a total of 49 papers, with a prominent position reserved for the four invited talks and the two first prizes of the best student paper competition.

Cambridge Primary Science is a flexible, engaging course written specifically for the Cambridge Primary Science curriculum framework. This Activity Book for Stage 4 contains exercises to support each topic in the Learner's Book, which may be completed in class or set as homework. Exercises are designed to consolidate understanding, develop application of knowledge in new situations, and develop Scientific Enquiry skills. There is also an exercise to practise the core vocabulary from each unit.

This teacher's guide accompanies a textbook written for the co-ordinated science syllabuses under the National Curriculum, and for Science: Physics. There are companion volumes on biology and chemistry. Topics are differentiated into core material for Double/Single Science and extension material for Science: Physics. These topics are linked to related ones in the companion volumes, but the links are optional, allowing the physics book to stand alone. The teacher's guide includes a link to the Programme of Study for Sc4 (and part of Sc3) and an analysis of the separate science syllabuses of all the main boards.

In 1995, during the publicity tour for his much-acclaimed first novel, "The Jade Peony," Wayson Choy received a mysterious phone call from a woman claiming to have just seen his mother on a streetcar. He politely informed the caller that she must be mistaken, since his mother had died long ago. "No, no, not that mother," the voice insisted. "Your real mother." Inspired by the startling realization that, like many children of Chinatown, he had been adopted, Choy constructs a vivid and moving memoir that reveals uncanny similarities between his award-winning first novel and the newly discovered secrets of his Vancouver childhood. From his early experiences with ghosts, through his youthful encounters with cowboys and bachelor uncles, to his discovery of family secrets that crossed the ocean from mainland China to Gold Mountain in the form of paper shadows, this is a beautifully wrought portrait of a child's world from one of Canada's most gifted storytellers.

The Grammar of the English Tense System forms the first volume of a four-volume set, The Grammar of the English Verb Phrase. The other volumes, to appear over the next few years, will deal with mood and modality, aspect and voice. The book aims to provide a grammar of tense which can be used both as an advanced reference grammar (for example by MA-level or postgraduate students of English or linguistics) and as a scientific study which can act as a basis for and stimulus to further research. It provides not only a wealth of data but also a unique framework for the study of the English tense system, which achieves great predictive and explanatory power on the basis of a limited number of relatively simple rules. The framework provided allows for an analysis of the semantics of individual tenses which reflects the role of tenses not only in locating situations in time relative to speech time but also in relating situations in time relative to one another to form temporally coherent discourse. Attention is paid to the relations between tenses. On the one hand, we can identify sets of tenses linked to particular temporal areas such as the past or the future. These sets of tenses provide for the expression of a system of temporal relations in a stretch of discourse in which all the situations are located within the same temporal area. On the other hand, there are many contexts in which speakers might in theory choose between two or more tenses to locate a situation (e.g., when we choose between the past tense and the present perfect to locate a situation before speech time), and the book examines the difference that a choice of one or the other tense may make within a discourse context. The book moves from a detailed exploration of the meaning and use of individual tenses to a

thorough analysis of the way in which tenses can be seen to function together as sets, and finally to a detailed examination of tenses in, and tenses interacting with, temporal adverbials. Original data is used frequently throughout the book to illustrate the theory discussed.
