Three Moves Ahead shows how classic chess strategies address the #1 problem of Information Age executives: how to move quickly in the face of incalculable complexities and unexpected change. This witty and novel guide, written for non-players, is packed with scores of real-world examples showing how top CEOs use Grandmaster techniques to win on Wall Street. Readers will see how a "strong square" strategy drove Adobe's rise from niche player to industry giant, as well as Western Union's success through a hundred years of technology changes. They'll learn how AOL has played a crucial "exchange sacrifice" to revive its fortunes, and how Google is taking turf from Microsoft with a "minority attack." Most importantly these days, they'll find out "what to do when you don't know what to do," and avoid the fate of companies like Polaroid, Gateway, and our dearly departed Ma Bell. "A fun ride from Apprentice to Business Grandmaster. Grab it!"—Donald Trump Bob Rice (Short Hills, NJ) was a long-time partner at Wall Street's prestigious Milbank, Tweed, Hadley, and McCloy. He left to start a software venture that was purchased by Viewpoint, a NASDAQ company of which he later became CEO. He is currently a Managing Partner of Tangent Capital, which structures financial products for hedge funds, and a member of the "New York Angels" venture finance group. Along the way, Bob served as Commissioner of the Professional Chess Association, founded the Wall Street Chess Club, ran numerous international chess events and produced a successful "Speedchess" series for ESPN.

'How can I learn from AlphaZero's games, aren't they too advanced for me?' many club players asked Matthew Sadler after reading his and Natasha Regan's groundbreaking Game Changer. Here is the answer: you may not be able to replicate their dazzling deep calculations, but every chess player, from club level up, can improve their game by using engines. You will probably be surprised, there is so much more your engine can do for you than just checking and calculating variations! In this thought-provoking new book, based on many years of working with the world's best chess software, Sadler presents a unique set of methods to work out using your engine. He shows how in your opening preparation, instead of sifting through masses of computer analysis you should play matches against your engine. He also explains how to train your early middlegame play, the conversion of advantages, your positional play, and your defence. And of course: how to analyse your own games. These generic training methods Sadler supplements with concrete middlegame and opening tools. He explains how the top engines tackle crucial middlegame themes such as entrenched pieces, whole board play, 'attacking rhythm', exchanging pieces, the march of the Rook's pawn, queen

versus pieces, and many others. He also opens your eyes to typical scenarios that the engines found and fine-tuned in popular openings such as the King's Indian, the Grünfeld, the Slav, the French and the Sicilian. Sadler illustrates his lessons with a collection of fantastic games, explained with his trademark enthusiasm. For the first time the superhuman powers of the chess engine have been decoded to the benefit of all players, in a rich and highly instructive book.

A pioneering neuroscientist argues that we are more than our brains To many, the brain is the seat of personal identity and autonomy. But the way we talk about the brain is often rooted more in mystical conceptions of the soul than in scientific fact. This blinds us to the physical realities of mental function. We ignore bodily influences on our psychology, from chemicals in the blood to bacteria in the gut, and overlook the ways that the environment affects our behavior, via factors varying from subconscious sights and sounds to the weather. As a result, we alternately overestimate our capacity for free will or equate brains to inorganic machines like computers. But a brain is neither a soul nor an electrical network: it is a bodily organ, and it cannot be separated from its surroundings. Our selves aren't just inside our heads--they're spread throughout our bodies and beyond. Only once we come to terms with this can we grasp the true nature of our humanity.

Positional Decision Making in Chess offers a rare look into the mind of a top grandmaster. In his efforts to explain his way of thinking, Boris Gelfand focuses on such topics as the squeeze, space advantage, the transformation of pawn structures and the transformation of advantages. Based on examples from his own games and those of his hero, Akiba Rubinstein, Gelfand explains how he thinks during the game.

'masterwork', Fundamental Chess Endings (co-authored with Frank Lamprecht, and also published by Gambit) is a modern endgame 'bible' and was studied intensively in his youth by current World Champion Magnus Carlsen. This is followed by a chapter by Kersti Torbjørnsrud, entitled Organizing Audiovisual Campaign Coverage and Its Influence on Power Relation Between Media and Politics in Norway. In her chapter, the author discusses how audiovisual campaign coverage is organized in Norway, and then, based on a production study and interviews with editors and political actors, proceeds to analyze how the organization of this news coverage influences power relations between media and politics in Norway. In the final chapter, we summarize and analyze the findings from both the country chapters and the case studies, and make an assessment of the classification of the Nordic countries as forming part of the Democratic Corporatist Model of media and politics. As editors, we hope this will give the reader not only a number of chapters that are interesting in themselves, but also a better understanding of differences and similarities between the Nordic countries

Magnus Carlsen is the greatest chess player of the 21st century. His tactical wizardry, strategic inventiveness, technical expertise and legendary fighting spirit put him head and shoulders above all other players. They also make his games tremendously instructive. To extract the best lessons from this amazing source material, Gambit has commissioned Martyn Kravtsiv, a Ukrainian grandmaster from the same generation as Carlsen (in fact, they were born just a few days apart). He has annotated these 42 games from a thoroughly modern perspective and with an innate understanding of the impact Carlsen's play has had on modern chess. In each game Kravtsiv picks out a key point - the Magnus Moment - where he demonstrates the special insight that sets him apart from other players. Perhaps he clarifies a messy situation, confident in his technical ability. Or sacrifices to gain practical chances in a game that has not gone to plan. Throughout, the emphasis is on how Carlsen makes life hard for his opponents in any way he can, whatever the objective assessment of the position on the board. Each game is a themed lesson on an important chess topic. The bulk of the book addresses the fight for advantage and initiative in the middlegame, but there are also chapters focusing on opening ideas, endgame play and human factors. Martyn Kravtsiv is a grandmaster from Lviv, Ukraine. His tournament results include tied first places at Cappelle in 2012 and the 2015 Ukrainian Championship. He represented his country at the 2017 World Team Championship and was a coach for the team that won silver medals at the 2016 Olympiad.

In this enlarged edition of a modern classic (first published in 1991) on the battle of chess ideas, grandmaster Mihai Suba developed the concept of ?dynamic potential? in modern chess strategy. In improving your position on the board the old

strategy principles often lead to conflicting conclusions. Suba takes another view on the meaning of, ?bad positions? and ?quiet moves?, and uses a light touch to explain his ideas. With many entertaining and instructive examples the author explores ?the accumulation of potential? as the modern way to get the advantage. A thought-provoking and yet very practical guide.

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

Viswanathan Anand Viswanathan Anand (1969) was the undisputed World Chess Champion from 2007-2013. In 2007 Anand won a strong eight-player, double round robin tournament in Mexico City. It is highly unusual to become World Champion by winning a tournament instead of a match, but this had to do with the fact that FIDE was looking for a way to reunify the World Chess Championship. Since 1993, there were two World Chess Champions: a Classical World Champion and a FIDE World Champion. At that time the reigning FIDE World Chess Champion, Garry Kasparov, and his Challenger, Nigel Short, decided to abandon FIDE and set up the Professional Chess Association (PCA). They held their own World Championship match. After the World Championship Tournament in Mexico, future World Championships returned to the match format, and there was one single World Champion again. Anand defended his title against Kramnik (2008), Topalov (2010) and Gelfand (2012). In 2013 he lost his title to Magnus Carlsen. Anand once said: "When I started out playing chess as a kid I thought I should be world champion. As a kid you have no idea what that means and you only sort of picture it. It is hard to imagine that I waited all those years and it happened in a late stage of my career." At the age of 18, Anand became India's first grandmaster. He won his first World Championship (FIDE) in 2000. In India, Anand is a national hero, and he received several prestigious awards. To name a few: in 1991 and 1992 the 'Tiger of Madras' won the first ever Rajiv Gandhi Khel Ratna Award, which is put up for the spectacular and most outstanding performance in the field of sports over a period of four years. In 1998 Anand received the Sportstar Millennium Award for best sportsperson of the millennium. In 2007 he was presented with the Padma Vibhushan, India's second highest civilian award, for his achievements in chess. He was the first ever sportsperson in India to receive this award. Anand: "In a way players at the top should try to promote the game in their own countries as that is the legacy that makes you feel proud. If you have not done that you have failed as a sportsperson." Anand is known for his deep opening preparation, but also for his playing speed and his ability to calculate complicated variations very quickly. It is not a coincidence that tactics play a big role in his games. Try this training book and check out if you can compete with Anand's tactical

Garry Kasparov's 1997 chess match against the IBM supercomputer Deep Blue was a watershed moment in the history of technology. It was the dawn of a new era in artificial intelligence: a machine capable of beating the reigning human champion at this most cerebral game. That moment was more than a century in the making, and in this breakthrough book, Kasparov reveals his astonishing side of the story for the first time. He describes how it felt to strategize against an implacable, untiring opponent with the whole world watching, and recounts the history of machine intelligence through the microcosm of chess, considered by generations of scientific pioneers to be a key to unlocking the secrets of human and machine cognition. Kasparov uses his unrivaled experience to look into the future of intelligent machines and sees it bright with possibility. As many critics decry artificial intelligence as a menace, particularly to human jobs, Kasparov shows how humanity can rise to new heights with the help of our most extraordinary creations, rather than fear them. *Deep Thinking* is a tightly argued case for technological
