Clemens investigates the 2006 closing of one of America's most potent symbols: a Detroit auto plant. "Punching Out" is an up-close report from the meanest, sharpest edge of America's deindustrialization, and a lament for a working-class culture that once defined a prosperous America.

From the Chrysler Six of 1924 to the front-wheel-drive vehicles of the 70s and 80s to the minivan, Chrysler boasts an impressive list of technological "firsts." But even though the company has catered well to a variety of consumers, it has come to the brink of financial ruin more than once in its seventy-five-year history. How Chrysler has achieved monumental success and then managed colossal failure and sharp recovery is explained in *Riding the Roller Coaster*, a lively, unprecedented look at a major force in the American automobile industry since 1925. Charles Hyde tells the intriguing story behind Chrysler—its products, people, and performance over time—with particular focus on the company's management. He offers a lens through which the reader can view the U.S. auto industry from the perspective of the smallest of the automakers who, along with Ford and General Motors, make up the "Big Three." The book covers Walter P. Chrysler's life and automotive career before 1925, when he founded the Chrysler Corporation, to 1998, when it merged with Daimler-Benz. Chrysler made a late entrance into the industry in 1925 when it emerged from Chalmers and Maxwell, and further grew when it absorbed Dodge Brothers and American Motors Corporation. The author traces this journey, explaining the company's leadership in automotive engineering, its styling successes and failures, its changing management, and its activities from auto racing to defense production to real estate. Throughout, the colorful personalities of its leaders—including Chrysler himself and Lee Iacocca—emerge as strong forces in the company's development, imparting a risk-taking mentality that gave the company its verve.

The Roaring Twenties in New York was a time of exuberant ambition, free-flowing optimism, an explosion of artistic expression in the age of Prohibition. New York was the city that embodied the spirit and strength of a newly powerful America. In 1924, in the vibrant heart of Manhattan, a fierce rivalry was born. Two architects, William Van Alen and Craig Severance (former friends and

successful partners, but now bitter adversaries), set out to imprint their individual marks on the greatest canvas in the world--the rapidly evolving skyline of New York City. Each man desired to build the city's tallest building, or 'skyscraper.' Each would stop at nothing to outdo his rival. Van Alen was a creative genius who envisioned a bold, contemporary building that would move beyond the tired architecture of the previous century. By a stroke of good fortune he found a larger-than-life patron in automobile magnate Walter Chrysler, and they set out to build the legendary Chrysler building. Severance, by comparison, was a brilliant businessman, and he tapped his circle of downtown, old-money investors to begin construction on the Manhattan Company Building at 40 Wall Street. From ground-breaking to bricklaying, Van Alen and Severance fought a cunning duel of wills. Each man was forced to revamp his architectural design in an attempt to push higher, to overcome his rival in mid-construction, as the structures rose, floor by floor, in record time. Yet just as the battle was underway, a third party entered the arena and announced plans to build an even larger building. This project would be overseen by one of Chrysler's principal rivals--a representative of the General Motors group--and the building ultimately became known as The Empire State Building. Infused with narrative thrills and perfectly rendered historical and engineering detail, Higher brings to life a sensational episode in American history. Author Neal Bascomb interweaves characters such as Al Smith and Governor Franklin Delano Roosevelt, leading up to an astonishing climax that illustrates one of the most ingenious (and secret) architectural achievements of all time.

A supplemental textbook for middle and high school students, Hoosiers and the American Story provides intimate views of individuals and places in Indiana set within themes from American history. During the frontier days when Americans battled with and exiled native peoples from the East, Indiana was on the leading edge of America's westward expansion. As waves of immigrants swept across the Appalachians and eastern waterways, Indiana became established as both a crossroads and as a vital part of Middle America. Indiana's stories illuminate the history of American agriculture, wars, industrialization, ethnic conflicts, technological improvements, political battles, transportation networks, economic shifts, social welfare initiatives, and more. In so doing, they elucidate large national issues so that students can relate personally to the ideas and events that comprise American history. At the same time, the stories shed light on what it means to be a Hoosier, today and in the past.

Since the early days of racing, Chrysler, Dodge, and Plymouth have dominated drag strips and race tracks. During 1955 alone, Chrysler 300s won 37 major stock car races and clinched both the NASCAR and AAA stock car championships. Although the impressive engine options of 1950s consistently out-performed the competition, they were a mere opening act for the extremes of performance that would be unleashed throughout the 1960s--the golden era of drag racing and factory super-performance cars. Maximum Performance: Super Stock Drag Racing 1962-1969 details Chrysler's amazing dominance in this era. Its drivers were among drag racing's first paid professional racers, and this book covers the complete story of Mopar drag racing accompanied by historical imagery as well as contemporary photos. This is the real story behind Super Stock and Factory Experimental drag racing as told the people who lived it!

In 1945 Henry Ford II and designer E.T. Gergorie got together and come up with the "Sportsman. A woodie convertible that they thought might perk up the warmed over 1942s that would become the 1946 models. A prototype was built in October 1945 and was given a green light for full production. Sales were meager and production only lasted two years, but the "Sportsman" left an indelible mark on post World

Revised and updated, with a new afterword by the author "There is much talk about 'audacity' these days, but true chutzpah is when the workers take over the factory and take on the bank. Kari Lydersen's invaluable account of the Republic sit-down strike is an instruction manual for worker dignity." —Mike Davis, author of *Buda's Wagon* and *City of Quartz* December 5, 2008: It wasn't supposed to work like this. Days after getting a \$45 billion bailout from the U.S. government, Bank of America shut down a line of credit that kept Chicago's Republic Windows & Doors factory operating. The bosses, who knew what was coming, had been sneaking machinery out in the middle of the night. They closed the factory and sent the workers home. Then something surprising happened: Republic's workers occupied the factory and refused to leave. Kari Lydersen, an award-winning reporter, tells the story of the factory takeover, elegantly transforming the workers' story into a parable of labor activism for the twenty-first century, one that concludes with a surprising and little-reported victory.

In the 87 issues of *Snow Country* published between 1988 and 1999, the reader can find the defining coverage of mountain resorts, ski technique and equipment, racing, cross-country touring, and the growing sport of snowboarding during a period of radical change. The award-winning magazine of mountain sports and living tracks the environmental impact of ski area development, and people moving to the mountains to work and live.

In the early 1970s, Chrysler started working on a "magic wagon" -- a completely new passenger van that would fit into a normal garage. It was a daring project for a company that was strapped for cash. This book taps the people who created the minivans, with previously unpublished photos of the original clay models. It is not just a story of a vehicle, but of the people who pushed it through the development process, brought it to life, and refreshed it in the face of intense competition. Engineers, planners, and designers started arguing over alternatives ten years before the first van left the factory. This book dives into the reasons behind their decisions, and some of the ways minivans could have been very different; it also covers electric and CNG minivans, engines and transmissions, concept cars, and the assembly plants. The paperback is generously illustrated with full-color design studies and photos of the final product; the Kindle version has fewer photos, but still covers the original clay models and the concepts. "It's incredibly rare when the auto industry creates an entirely new class of vehicle, and rarer still when that innovation is an unqualified success story, but such was the case with Chrysler and the development of the minivan. "In *Mopar Minivans*, Zatz uses the people who were there to retell in vivid detail the largely forgotten story of how this innovative people mover evolved into a quintessential piece of American family life for two generations. It's a story that showcases not only how the automotive industry can work at its best, but also the ways that the industry's prevalent groupthink mentality can stifle innovation." -- Larry Vellequette, *Automotive News* "I am amazed how complete you are, having not been on-site in the front trenches during agreements, disagreements, and, yes, even skirmishes, at times." -- Chrysler employee David Zatz founded Chrysler-focused web site [allpar.com](http://allpar.com); he also holds a Ph.D. in social and organizational psychology from Columbia University, and has been a business consultant for 20 years.

of the road. With hundreds of color photos of beautiful restorations and a collection of rare archival photos, Dennis Adler has compiled a detailed history of the emerging postwar American auto industry.

Jennifer Granholm was the two-term governor of Michigan, a state synonymous with manufacturing during a financial crisis that threatened to put all America's major car companies into bankruptcy. The immediate and knock-on effects were catastrophic. Granholm's grand plans for education reform, economic revitalization, clean energy, and infrastructure development were blitzed by a perfect economic storm. Granholm was a determined and undefeated governor, who enjoyed close access to the White House at critical moments (Granholm stood in for Sarah Palin during Joe Biden's debate preparation), and her account offers a front row seat on the effects of the crisis. Ultimately, her story is a model of hope. She hauls Michigan towards unprecedented private-public partnerships, forged in the chaos of financial freefall, built on new technologies that promise to revolutionize not only the century-old auto industry but Michigan's entire manufacturing base. They offer the potential for a remarkable recovery not just for her state, but for American industry nationwide.
