"More than half the world's population lives in cities; by 2050, it will be more than 75%. Cities are often the economic, cultural, and political drivers of states, and of globalization more generally. Yet, constitutionally-speaking, there has been little to no consideration of cities (and especially megacities, with populations exceeding those of many of the world's countries) as discrete or distinct constitutional or federal entities, with political identities and economic needs that often differ from rural regions or so-called "hinterlands." This book intends to taxonomize the constitutional relationship between states and (mega)cities and theorize a way forward for considering the role of the city in future. In six chapters and a conclusion, the book considers the reason for this "constitutional blind spot," the relationship between cities and hinterlands (the center/periphery divide), constitutional mechanisms for dealing with regional differences, a comparative constitutional analysis of urban-center autonomy, and recent and future innovations in city governance"--

Over the next 20 years, most low-income countries will, for the first time, become more urban than rural. Understanding demographic trends in the cities of the developing world is critical to those countries - their societies, economies, and environments. The benefits from urbanization cannot be overlooked, but the speed and sheer scale of this transformation presents many challenges. In this uniquely thorough and authoritative volume, 16 of the world's leading scholars on urban population and development have worked together to produce the most comprehensive and detailed analysis of the changes taking place in cities and their implications and impacts. They focus on population dynamics, social and economic

differentiation, fertility and reproductive health, mortality and morbidity, labor force, and urban governance. As many national governments decentralize and devolve their functions, the nature of urban management and governance is undergoing fundamental transformation, with programs in poverty alleviation, health, education, and public services increasingly being deposited in the hands of untested municipal and regional governments. *Cities Transformed* identifies a new class of policy maker emerging to take up the growing responsibilities. Drawing from a wide variety of data sources, many of them previously inaccessible, this essential text will become the benchmark for all involved in city-level research, policy, planning, and investment decisions. The National Research Council is a private, non-profit institution based in Washington, DC, providing services to the US government, the public, and the scientific and engineering communities. The editors are members of the Council's Panel on Urban Population Dynamics.

For millennia, urban centers were pivots of power and trade that ruled and linked rural majorities. After 1950, explosive urbanization led to unprecedented urban majorities around the world. That transformation--inextricably tied to rising globalization--changed almost everything for nearly everybody: production, politics, and daily lives. In this book, seven eminent scholars look at the similar but nevertheless divergent courses taken by Mexico City, Rio de Janeiro, Buenos Aires, Montreal, Los Angeles, and Houston in the twentieth century, attending to the challenges of rapid growth, the gains and limits of popular politics, and the profound local effects of a swiftly modernizing, globalizing economy. By exploring the rise of these six cities across five nations, *New World Cities* investigates the complexities of power and prosperity, difficulty and desperation, while reckoning with the social, cultural, and ethnic dynamics that mark all metropolitan areas. Contributors: Michele Dagenais, Mark Healey, Martin V. Melosi, Bryan McCann, Joseph A. Pratt, George J. Sanchez, and John Tutino.

For women and girls, urbanization is often associated with greater access to education and employment opportunities, lower fertility rates, and increased independence. Yet women are often denied the same benefits and opportunities that cities offer to men. Moreover, women are frequently excluded from efforts to create more equitable and sustainable cities. Women living in urban slums particularly endure multiple hardships, with basic needs such as durable housing and access to clean water and improved sanitation facilities often going unmet. Mao Zedong's political career spanned more than half a century. The ideas he championed transformed one of the largest nations on earth and inspired revolutionary movements across the world. Even today Mao lives on in China, where he is regarded by many as a near-mythical figure, and in the West, where a burgeoning literature continues to debate his memory. In this book, leading scholars from different generations and around the world offer a critical evaluation of the life and legacy of China's most famous - some would say infamous - son. The book brings the

In addition, the book provides the results of the CityIQ indicator ranking of intelligent cities in China and worldwide, a system that focuses on three of the most crucial aspects of urban development: the development environment, future trends, and construction and operation. The notion of 'creative cities' - where cultural activities and creative and cultural industries play a crucial role in supporting urban creativity and contributing to the new creative economy - has become central to most regional and urban development strategies in recent years. A creative city is supposed to develop imaginative and innovative solutions to a range of social, economic and environmental problems: economic stagnancy, urban shrinkage, social segregation, global competition or more. Cities and regions around the world are trying to develop, facilitate or promote concentrations of creative, innovative and/or knowledge-intensive industries in order to become more competitive. These places are seeking new strategies to combine economic development with quality of place that will increase economic productivity and encourage growth. Against this increasing interest in creative cities, this volume offers a coherent set of articles on sustainable and creative cities, and addresses modern theories and concepts relating to research on sustainability and creativity. It analyses principles and practices of the creative city for the formulation of policies and recommendations towards the sustainable city. It brings together leading academics with different approaches from different disciplines to provide a comprehensive and holistic overview of creativity and sustainability of the city, linking research and practice. In doing so, it puts forward ideas about stimulating

The giant city of today is a unique phenomenon. Never before have such acute problems of government, the provision of essential services, planning, social life, and civilized living arisen from uncontrolled urbanization. In the West and in the East, in the more developed and in the less developed countries, in capitalist and communist states, the great metropolis represents a problem of the first importance which challenges the statesman, the official, the town planner, the political scientist, the sociologist and, above all, the intelligent citizen. The editor has here assembled an authoritative series of studies describing the growth, significance, government, politics and planning of twenty-four great cities of the world. They show how these widely scattered cities faced essentially similar problems. Each study deals with the actual working of one city in the 1950s, how its elective and executive bodies are organized, the kind of political forces which motivate their activities, the scope and character of the municipal services, how they are financed. The cities dealt with include Bombay, Amsterdam, Moscow, Montreal, Stockholm, Rome, New York, London, Sydney and Tokyo. This book was first published in 1954.
