Topics include the roles and experiences of passengers and bystanders, car crash conspiracy theories, the automobile as a site of murder, studies of car crash cinema, and psychological interpretations of the notion of the 'accident.' The book features original essays by such underground icons as Kenneth Anger and Adam Parfrey.

This book chronicles the divergent growth trends in car production in Belgium and Spain. It delves into how European integration, high wages, and the demise of GM and Ford led to plant closings in Belgium. Next, it investigates how lower wages and the expansion strategies of Western European automakers stimulated expansion in the Spanish auto industry. Finally, it offers three alternate scenarios regarding how further EU expansion and Brexit may potentially reshape the geographic footprint of European car production over the next ten years. In sum, this book utilizes history to help expand the knowledge of scholars and policymakers regarding how European integration and Brexit may impact future auto industry investment for all EU nations.

This paper addresses the issue of threshold effects between public debt and economic growth in the Caribbean. The main finding is that there exists a threshold debt to gross domestic product (GDP) ratio of 55–56 percent. Moreover, the debt

dynamics begin changing well before this threshold is reached. Specifically, at debt levels lower than 30 percent of GDP, increases in the debt-to-GDP ratio are associated with faster economic growth. However, as debt rises beyond 30 percent, the effects on economic growth diminishes rapidly and at debt levels reaching 55-56 percent of GDP, the growth impacts switch from positive to negative. Thus, beyond this threshold, debt becomes a drag on growth.

The story of the Soviet Union's cars has to be seen in the context of a planned society in which everything was planned well in advance, and consumer items were not a priority until well after the Second World War. This extraordinarily detailed study charts the history of Soviet cars from the birth of the Soviet Union in 1917 until its demise in 1990, with a conclusion about the post-Soviet era. It is the story of an insular, state-run car industry in which the carefully thought-out ideas of ministerial planners, rather than fickle customers in a free market, determined what cars were made in a country where the open road was often a 300-mile track across a windswept steppe.
