This book provides evidence of the significance of a society's structure and normative definitions in giving shape to one part of the life course, examining closely a major period of life course transition, the move from adolescence to adulthood in Great Britain.

This is the first book to draw together the evidence on the 'case' for skills and to examine the policies appropriate to achieving 'skills for all'. Learn to succeed: argues that raising skill levels is crucial to both economic success and social inclusion; demonstrates the benefits of higher skill levels to people, to companies and to communities; synthesises a wide range of materials in one convenient volume, providing a reference source on the issues; deals with the issues at both national and local levels; sets out a clear agenda for action. Learn to succeed is essential reading for policy makers and practitioners in national, regional and local government departments and agencies, and is also recommended for students and academics on courses at undergraduate and graduate level in applied economics, education or public policy.

During the past two decades, wages of skilled workers in the United States rose while those of unskilled workers fell; less-educated young men in particular have suffered unprecedented losses in real earnings. These twelve original essays explore whether this trend is unique to the United States or is part of a general growth in inequality in advanced countries. Focusing on labor market institutions and the supply and demand forces that affect wages, the papers compare patterns of earnings inequality and pay differentials in the United States, Australia, Korea, Japan, Western Europe, and the changing economies of Eastern Europe. Cross-country studies examine issues such as managerial compensation, gender differences in earnings, and the relationship of pay to regional unemployment. From this rich store of data, the contributors attribute changes in relative wages and unemployment among countries both to differences in labor market institutions and training and education systems, and to long-term shifts in supply and demand for skilled workers. These shifts are driven in part by skill-biased technological change and the growing internationalization of advanced industrial economies.

This 2005 survey of the United Kingdom's economy examines the key challenges for translating resilient economic performance into faster growth in living standards. In particular, it looks at housing supply, public services and infrastructure ...

These tables, prepared by the Government Actuary's Department, are designed to assist the courts in calculating the amount of compensation appropriate to a range of situations in personal injury and fatal accident cases. Also known as the Ogden Tables (after Sir Michael Ogden, QC, the original working party chairman) this is the 6th edition of the publication which supersedes the 5th edition (ISBN 9780115601170) published in 2004. The new multipliers use mortality rates from the latest available population projections, which take account of data following the last National Census. They relate to pecuniary loss for life and for loss of earnings to pension age, both for males and females at different ages. The edition includes a section covering discounts to the working life multiplier for contingencies other than mortality, based on two recent research studies.

\* A list of syllabus learning outcomes covered in each chapter \* Referencing of each chapter section to the syllabus Learning Outcomes covered in the section \* Clear concise topic-by-topic coverage \* Examples and Exercises to reinforce learning, confirm understanding and stimulate thought \* A round up of the key points in each chapter \* A quick quiz at the end of each chapter We recognise that most students have only limited time for study and that some study material available on the market can be very time-consuming to use. Economic globalization has led to intense debates about the competitiveness of nations. Prosperity, social justice, and welfare are now seen to depend on the creation of a 'high skilled' workforce. This international consensus around high skills has led recent American presidents to claim themselves 'education presidents' and in Britain, Tony Blair has announced that 'talent is 21st-century wealth'. This view of knowledge-driven capitalism has led all the developed economies to increase numbers of highly-trained people in preparation for technical, professional, and managerial employment. But it also harbours the view that what we regard as a 'skilled' worker is being transformed. The pace of technological innovation, corporate restructuring, and the changing nature of work require a new configuration of skills described in the language of creativity, teamwork, employability, self-management, and lifelong learning. But is this optimistic account of a future of high-skilled work for all justified? This book draws on the findings of a major international comparative study of national routes to a 'high skills' economy in Britain, Germany, Japan, Singapore, South Korea, and the United States, and includes data from interviews with over 250 key stakeholders. It is the first book to offer a comparative examination of 'high skill' policies -- a topic of major public debate that is destined to become of even greater importance in all the developed economies in the early decades of the twenty-first century.

Immigration is a major component of population change for countries across Europe. However, questions remain about where immigrants go after they arrive in a new country. What are the patterns of internal migration of minorities (immigrants and their descendants), and what are the causes and implications of these flows? Migration within a nation state is a powerful force, redistributing the population and altering the demographic, social and economic composition of regions, cities and neighbourhoods. Yet relatively little is known about the significance of ethnicity in migration processes, or how population movement contributes to immigrant and ethnic integration. Minority internal migration is an emerging field of academic interest in many European countries in the context of high levels of immigration and increased political interest in inter-ethnic relations and place-based policies. This book brings together experts in the fields of migration, ethnicity and diversity from across Europe to examine patterns of residential mobility of minorities, and to synthesise key themes, theories and methods. The analyses presented make important contributions to theories of migration and minority integration and may inform policies that aim to respond to local population change and increasing diversity. The conclusions of the book form an agenda for future research on minority and immigrant internal migration in developed societies.

The world of information technology is diverse, impacting on, driving and supporting westernised business and industry as well as affecting every individual. Teachers of IT need to ensure that students recognise and understand why information technology is so important to business and society, as well as helping them to develop functional skills. Teaching Information Technology 14+ helps teachers of IT do just that. It explores the nature of Information Technology (IT), describes some of the current issues and debates surrounding IT and suggests appropriate strategies for successful learning and assessment. In addition to providing teachers with support in differentiating between the numerous Information Technology qualifications, it also includes some examples of relevant teaching and learning strategies and includes case studies and quotations from successful IT teachers and industry practitioners, drawn from a range of environments to highlight key concepts. Teaching Information Technology 14+ is not designed simply as another resource book, but as a means to engage students in the wider aspects of IT through the inclusion of reflective questions, encouraging readers to research and debate the place of IT today.

This report reviews how both national policy and regional strategies support innovation in the North of England and how these efforts could be improved.

Social arrangements of society's institutions deflect people's achievement patterns. Some schools take only talented students, others take the rest; within schools, students are separated into ability groups. Firms are in different industries and vary in size. During their educational and work careers, people get sorted into these different locations. Diverging Pathways examines that sorting process and shows how it affects people's achievements. Some locations accelerate achievements, others depress them - in elementary, secondary, and postsecondary school programs, and in the labor force. Most important, some people are consistently in the same kinds of locations, repeatedly advantaged or disadvantaged, especially in school. They end up far apart as adults, due in large part to the cumulative effects of the social arrangements they passed through. Diverging Pathways follows the members of a 1958 British birth cohort for the first twenty-three years of their lives. It presents a detailed picture of their family backgrounds and their school and early labor force experiences and achievements. Besides the cumulative effects of institutional locations, it shows major career differences of men and women, and it describes how the interface between postsecondary education and the labor force alters some of the outcomes of elementary and secondary schooling.
