W.A. Mackintosh (1895-1970) was an exemplary public intellectual and a modest person of rare abilities. In the first biography of this influential economist, Hugh Grant addresses how Mackintosh's commitment to public service and to the principles of reason and tolerance shaped his contribution to economic scholarship, government policy, and university governance. In the 1920s and '30s, Mackintosh emerged as the country's leading economist. His most notable contribution was through his "co-discovery" with Harold Innis of the staple thesis of Canadian economic development, which informed research in the field for a generation. During the Second World War Mackintosh joined the Department of Finance, where he played a central role in the successful management of the wartime economy and in Canada's adoption of Keynesian economic policy. As the author of the federal government's 1945 White Paper, Mackintosh laid out the broad strokes of Canada's adherence to Keynesianism in the post-war period. After his return to Queen's, Mackintosh would become the university's fifteenth principal and guide the institution as it prepared for the transformation of Canadian universities. A remarkable man who had a profound influence on the development of modern Canada, this definitive biography restores the record on his important contributions to Canadian economic thought and national and international finance.

This book, first published in 1990, examines the works of Theodore Limberg and Fritz Schmidt and their contribution to the

This analysis is apposite. History indicates we will experience further periods of inflation and accompanying debate on the serviceability of accounting proposals to incorporate the financial effects of price and price-level changes.

In *Masterminding the Deal*, Peter Clark and Roger Mills, both financial experts experienced in the M&A field, examine past mergers and analyze performance in two critical areas —the identification of critical characteristics and attributes separating more successful mergers from the rest, and the synergy benefits — expenses, revenues, tax — that ensure maximum rewards. From this analysis they draw some conclusions and go on to identify seven key principles for merger success. "The main objective of this book is to clear away a vast amount of past deficient analysis and to retrieve and reorganize what is of value in evaluating merger success and failure, using tough-minded criteria implanted in current finance," says Bill Weinstein in the foreword. The authors offer an action plan for the boards and executives involved in acquisitions, covering the questions of central importance: which target types to pursue and which to avoid, when to act, how much to pay and, uniquely, how to determine whether the deal is successful. Their intention is to assist companies in the M&A process and to avoid merger underperformance.

In Audit Effectiveness, Dr Kamil Omoteso examines how information technology is changing the landscape for the audit profession as IT tools and techniques continue to be developed for auditors in the pursuit of quality, efficiency and effectiveness. In addition to shedding light on practical subjects such as audit automation, continuous online auditing and computer auditing, this book introduces some theory that helps explain the motivation for the use of new tools and techniques, and assists understanding of their impact on the quality of audit judgment. The book proposes a three-layered model - an integration of contingency, socio-technical systems and structuration theories - for a comprehensive understanding of IT's impact on audit. The model advocates that the use of IT in audits is a function of certain contingent factors that determine an optimal mix of human skills and technological capabilities, which would lead to changes in the nature of auditors' roles and outputs and audit organisations' structures. Dr Omoteso puts forward an audit automation maturity model that can help audit firms/departments to understand their current level of IT integration and how to systematically enhance their capabilities with a view to meeting modern IT challenges - taking them from the position of mere 'followers of technology' to that of effective 'leaders of technology'. Audit Effectiveness is for anyone practising in auditing or accounting automation, as well as for those with an academic or research interest in the challenges posed by technological advances for auditors in particular, and for managers in general.
