Includes an introduction to making models out of dough and instructions for creating such items as bowls, pots, masks, plaques, pictures, and creatively designed beads and buttons. Provides step-by-step instructions for modeling in clay, including such projects as slab pots, a portrait, and a wall plaque.

The late Albert Elsen was the first American scholar to study seriously the work of the French sculptor Auguste Rodin, and the person most responsible for a revival of interest in the artist as a modern innovator--after years during which the sculpture had been dismissed as so much Victorian bathos. After a fortuitous meeting with the financier, philanthropist, and art collector B. Gerald Cantor, Elsen helped Cantor to build up a major collection of Rodin's work. A large part of this collection, consisting of more than 200 pieces, was donated to the Stanford Museum by Mr. Cantor, who died recently. In size it is surpassed only the by the Musée Rodin in Paris and rivaled only by the collection in Philadelphia. In scope the collection is unique in having been carefully selected to present a balanced view of Rodin's work throughout his life. Rodin's Art encompasses a lifetime's thoughts on Rodin's career, surveying the artist's accomplishments through the detailed discussion of each object in the collection. It will begin with essays on the formation of the collection, the reception of Rodin's work, and his casting techniques. The entries that follow are arranged topically and include extensive discussions of Rodin's major projects.

Sculpting the Figure in Clay is a comprehensive instructional guide to sculpting the human figure in clay. This all-inclusive volume lays out an easy-to-follow step-by-step method of

blocking out the plane structure and anatomy of the posed figure. The author's unique approach utilises a geometric system consisting of blocks, simple shapes and guidelines, which instructs students in a new and instinctive sculptural style. Lessons in the book simulate the classroom experience. Sculptural concepts are illustrated through a sequence of dramatic photographs of the model, taken from every angle of the model in a given pose and the entire sculpting process is shown from start to finish, with accompanying text.

This is the first of a series of publications designed to be used as teaching or learning aids to be used by teachers to develop clay modelling skills themselves or as classroom projects to develop pupil's clay modelling skills. The models are based on years of experience teaching in nursery and primary education and with groups of adults and children with special educational needs. Each book contains several practical projects, demonstrated in a step by step manner enabling you to create the models shown on the cover.

Full-color illustrations and step-by-step directions for 29 miniature animals, including sloth, flamingo, narwhal, llama, and more. Suitable for crafters of all ages, the projects make charming keepsakes and unique gifts.

The 8th International Conference on Physical Modelling in Geotechnics (ICPMG2014) was organised by the Centre for Offshore Foundation Systems at the University of Western Australia under the auspices of the Technical Committee 104 for Physical Modelling in Geotechnics of the International Society of Soil Mechanics and Geotechnical Engineering. This quadrennial conference is the traditional focal point for the physical modelling community of academics, scientists and engineers to present and exchange the latest developments on a wide range of physical modelling aspects associated with geotechnical engineering. These

proceedings, together with the seven previous proceedings dating from 1988, present an inestimable collection of the technical and scientific developments and breakthroughs established over the last 25 years. These proceedings include 10 keynote lectures from scientific leaders within the physical modelling community and 160 peer-reviewed papers from 26 countries. They are organised in 14 themes, presenting the latest developments in physical modelling technology, modelling techniques and sensors, through a wide range of soil-structure interaction problems, including shallow and deep foundations, offshore geotechnics, dams and embankments, excavations and retaining structures and slope stability.

Fundamental aspects of earthquake engineering, geohazards, ground reinforcements and improvements, and soil properties and behaviour are also covered, demonstrating the increasing complexity of modelling arising from state-of-the-art technological developments and increased understanding of similitude principles. A special theme on education presents the latest developments in the use of physical modelling techniques for instructing undergraduate and postgraduate students in geotechnical engineering.

Katherine Dewey's expressive and elegantly detailed sculptures enchant all who see them.

With the magical medium of polymer clay and this book, you can follow in her footsteps.

Thorough instructions supported by more than 400 step-by-step color photos and 200 detailed drawings cover the entire process of sculpting realistic figures, from selecting clay and gathering essential tools to the basics of modeling the human figure, to incorporating poses, facial expressions, ethnic and gender subtleties, costumes, and painted finishing touches. Easy-to-read maps of the figure illustrate the landmarks of the body, while scale diagrams indicate the simple shapes hidden within the human form, as well as how to combine and

This book describes the development of a constitutive modeling platform for soil testing, which is one of the key components in geomechanics and geotechnics. It discusses the fundamentals of the constitutive modeling of soils and illustrates the use of these models to simulate various laboratory tests. To help readers understand the fundamentals and modeling of soil behaviors, it first introduces the general stress–strain relationship of soils and the principles and modeling approaches of various laboratory tests, before examining the ideas and formulations of constitutive models of soils. Moving on to the application of constitutive models, it presents a modeling platform with a practical, simple interface, which includes various kinds of tests and constitutive models ranging from clay to sand, that is used for simulating most kinds of laboratory tests. The book is intended for undergraduate and graduate-level teaching in soil mechanics and geotechnical engineering and other related engineering specialties. Thanks to the inclusion of real-world applications, it is also of use to industry practitioners, opening the door to advanced courses on modeling within the industrial engineering and operations research fields.

You can create a variety of items out of clay. Wherever your creativity takes you. All in this book! When creating with clay, kids are introduced to a wide range of cognitive and manual skills: they'll work three-dimensionally; make figurative models; use their imaginations in making jewelry and toys; design with color; and decorate with paints. Each project contains a complete materials list, clear step-by-step photographs of the process, as well as finished samples. The activities are open-ended, designed to be explored over and over, often with different results. Geared toward being taught or guided by adults, they are enriching for a range of ages and skill levels. Gain firsthand knowledge on your favorite topic with Modeling

"Carradori's book of instructions is vital to understanding the art and craft of sculpting as they were practiced before the twentieth century, since little substantial material exists that demonstrates, in an informed, didactic manner, the various tools and techniques used by ancient sculptors. Carradori's work is the most comprehensive and instructive; it includes thirteen articles that explain how to restore marble sculpture, model clay, work with stucco and wax, cast and finish bronze, and how to carve and enlarge models into marble and stone, as well as seventeen tables that illustrate the arrangement, methods, and tools used in each of these processes. The book also includes the complete Italian text."--Jacket.

Presents easy-to-follow instructions on using modeling clay and other materials to create animal sculptures, including ladybugs, giraffes, crabs, dogs, rabbits, and turtles.

Get ready to get creative with clay! This book introduces readers to the world of clay modeling and provides step-by-step instructions for fun models, such as penguins, robots, monsters, and trains. Age-appropriate and straightforward text is paired with photographs of each step of the modeling process to give readers a clear sense of each craft's process and goal. The book begins with a list of materials for readers to collect, including clay, modeling tools, cutlery, and other household items. Readers will feel like real artists as they sculpt and shape their clay into fun figures that can be used for play and decoration.

Renowned contemporary sculptor Bruno Lucchesi takes a single life-size head through all the stages of rough in, modeling, refining the surface, and finishing and texturing, enabling the reader to see exactly how he positions and models every detail.
