The 16-Word Diet is a once-in-a-generation book - a survival guide for people who are tired of miracle diets and magic pills, and who want common-sense solutions to the complex problems of obesity. Written by mathematician and weight loss expert Jay Wiener, The 16-Word Diet explodes dozens of popular myths about dieting and replaces them with just sixteen words - the simple keys to losing weight permanently and living a longer, healthier life. Here are a few of the many topics covered, written with the author's remarkable gifts for wisdom and laughter: On Maintenance: Losing weight is hard work, but maintaining a weight loss is hand-to-hand combat. If you don't learn how to maintain before you start to diet, you will be clobbered. On Goal Setting: Most dieters never choose reasonable goals. Worse, they do no planning before they start, unless you count reading the directions on a bottle of enchanted diet pills as planning. On Fad Diets: The Raw Food Diet is a typical fad. Dieters aren't allowed to cook their food. Raw vegetables are fine with me, but... Raw pork? Raw chicken? Those dieters may get thinner, but who wants to kiss them? On Binge Eating: I was a binge-eater for twenty years. The most important thing to understand is this: you can stop. Not immediately, of course, but you can learn how to turn massive overeating into mini-binges, and then into micro-binges, and happily live that way forever. On Bad Obesity Research: They studied the effects of diet on ED by asking men to remember how often they had ED. Seriously? I can remember how often I've slept in an igloo with Jennifer Lawrence, but not much else. On Temptation: Tempted to indulge in a chocolate croissant at Starbucks? Think of all the teenage baristas who breathed on that croissant before you started to eat it. On Exercise: You hate exercise. Too bad. If you're serious about losing weight, then stop reading and go for a walk. Buy this book when you come back. The 16-Word Diet. The most important new diet book in a generation - and fun to read. *****

From the Introduction: People who succeed at losing weight and keeping it off share a secret: they understand that losing weight is not about food. It's about every part of your life. And that's why this book is so different from other 'diet' books. It doesn't focus on what you eat; it focusses on how you can live a slimmer, healthier life for the rest of your life. What you eat is an important part of your life, but not the only part. To be successful, you need new skills that will help you live a healthy life at a significantly lower weight. How do you prepare before you start to diet? What are the most common mistakes people make when starting a diet? How do you choose between low-fat and high-fat diets? What makes us slip after months of success? How can we recover? What is the true value of exercise? How can you handle weight-loss plateaus? How should you manage vacations and holidays? Seven topics (there are many others) and only one is about food - because dieting is about so much more than what you eat. The 16-Word Diet is a rare book. It can change your life.

Do you want to lose fat? Build muscle? Feel better? Look younger? Optimize your health? Perform better? Now you can. You don't have to resort to infomercial style gimmicks and gadgets. This book will help you achieve your objectives. It provides the 'source code' to building diet and supplement plans for you (or your clients) no matter your (or their) level of experience. It is interactive: enabling you to follow the path through the book that is most applicable. This book is not meant to be read once, cover-to-cover, and then either committed to memory in some fashion or forgotten about. It's designed to be a tool - a resource - that is used interactively on an ongoing basis. Here is a sampling of FAQs from Chapter 9: Q: Are the recommendations in this book specifically applicable to a gender or age group? A: The short answer is "no." This book is written to be applicable to any healthy adult. Most of it will also apply to teenagers, though the energy expenditure estimations in Chapter 1 may need to be adjusted upward for teens and young adults (folks who are 13-20 years old). For kids younger than 13 - in fact, anyone younger than 18 - these individuals should work with their parent(s)/guardian(s) and their doctor or medical/health care practitioner on applying the principles from this book. Q: Since you're a vegan, why do you allow for the consumption of animal products in this book? A: I wrote this book for a wide audience. I don't like 'preaching to the choir' as the saying goes. Yes, if you're already eating vegan or plant-based you will benefit from reading this book. But I also want this book to be useful by those following other ways of eating: vegetarians, pescatarians, omnivores, those with allergies and intolerances, etc. I like to meet people where they are - not where I think they should be or others think they should be. I also don't view the movement from the typical western diet to a vegan or plant-based diet as having to be transformational - that is, a giant leap - it can be incremental. Some people will take baby steps, and that is okay. Some people will take no steps at all and choose to eat as much animal product as they can while following my plans. That's the choice of each individual to make, though I hope most move in the direction of plant-based and vegan eating - even if only by an inch or two. Of course, I would love it if everyone on earth stopped consuming animal products, but each individual needs to make this choice freely. Q: Why don't you emphasize exercise for fat loss? A: If your diet and sleep habits are off, then fat-burning exercise is not going to help you very much. There is a saying out there that is quite true: "you can't out-exercise a bad diet." This is true calorically speaking, since you can eat and drink a 1,000 calories very easily at a restaurant without even thinking about it, but would have to push yourself pretty hard to burn 1,000 calories during exercise (and you'd also find yourself pretty darn hungry shortly thereafter and likely to binge). But it's also true hormonally speaking: you can't out-exercise a hormonal s**t-storm (pardon my French!). If your diet and sleeping habits are off, you will only make a bad situation worse by piling on exercise. As just one example, cortisol, the so-called stress hormone, is elevated by exercise, lack of sleep, caffeine, stress, and other factors. If you have cortisol levels that are continuously elevated you'll have a heck of a time losing fat; you'll also be putting your overall health at risk. (By the way, this doesn't mean you shouldn't exercise. It just means you shouldn't view exercise as the magic bullet for fat loss. Exercise has many other benefits. Also, more is not better: you want to exercise the right amount based on your needs, capabilities, and objectives.)

In January of 2013 Max was diagnosed with an incurable chronic inflammatory degenerative autoimmune disease. Contrary to all medical

prognosis that Max will need multiple surgeries and will suffer in pain for the rest of his life, taking powerful anti-inflammatory and immune suppression drugs, Max completely recovered in 180 days. Dozen's of scientific research papers were published in the past five years and new diagnostic tools were developed revealing the real causes and factors for chronic inflammation, degeneration and premature aging of cells, tissues and organs. When your joints hurt so much that you cannot walk, when inflammation and pain takes over your body, when ulcers bleed inside your stomach cavity, when no medicine brings relief, when physicians tell you there is no medical cure - you don't give up hope. Suffering brings wisdom, strength and most important knowledge that can change everything. We were told so many times that there is no medical cure for this painful, inflammatory, degenerative, auto-immune disease, and they were absolutely right because the cure was at the farm and not at the pharmacy. Max's blood sedimentation rate was reduced 20 folds. From 61 mm/hr to 3 mm/hr in 180 days after changing his diet to real food. Max's calprotectin protein (inflammation marker) was reduced 28 folds. From 504 mcg/g to 18 mcg/g in 180 days after changing his diet to real food. Max's C-reactive protein (inflammation marker) was reduced 12 folds. From 6.2 mg/dl to 0.5 mg/dl in 180 days after changing his diet to real food. The book is short, simple, and straight forward. It is an effective tool in your hands to start your own search for the truth. The book is printed in full color and contains 27 pictures and over 90 references and links to relevant scientific research papers, medical research papers, books, videos, and news articles published worldwide in the last five years. As someone who juggles many jobs between being a doctor, a personal trainer and an author, I understand how difficult it can be to prioritise food and eating well. I wanted to create a collection of beautiful recipes that are not only nutritious and great tasting, but super quick and simple to make, using only a handful of ingredients. The Fuel Up section is designed for just that - it is where you will find my recipes for grab-and-go breakfasts, lunches on the run and dinners that take less than 30 minutes to satisfy you after a long day at work! However, I truly believe that when we do have the time to cook a meal, bake some bread and sit down with friends and family to share some food, we should

totally embrace those moments. This is where the Power Down section comes in: for when you're not in a hurry, I have included my chosen recipes for lazy weekend brunches, family dinners, breads and teatime treats. This is a cookbook that will help you fall in love with cooking and improve your relationship with food, so that you approach it not only as a source of nutrients, but also happiness, satisfaction and health.
