*Study Guide to Preventive Medical Care in Psychiatry: A Case Approach* is an indispensable companion to *Preventive Medical Care in Psychiatry: A Practical Guide for Clinicians*. Like the primary text, the study guide was written by experts in the field -- many with dual training in psychiatry and medicine -- and it reflects the text's focus on clinical care for psychiatrists and other mental health care providers who work in outpatient mental health and integrated clinics. It is critical that mental health providers and trainees learn how to prevent and detect common medical conditions in their patients, who typically have higher rates of adverse health risk behaviors and may lack a primary care physician. Through the deft use of clinical cases, the study guide helps providers and trainees acquire the knowledge and skills necessary to view the patient holistically and improve outcomes. The study guide's authors employ effective organizational strategies and pedagogic features to achieve these objectives: The study guide's structure mirrors that of the primary text, with eight, multi-chapter sections authored by a team of leading experts in the respective areas. Chapter content is embodied in a series of clinical cases, each of which is followed by several multiple-choice questions, allowing readers to test their knowledge of the material. In the answer guide, the correct answer to each question is presented, along with an explanation and the corresponding page numbers from the primary text where more complete coverage can be found. This cross-referencing allows readers to contextualize the question and answer and provides them with the opportunity to consolidate their learning of important information. The original cases are well written and compelling, offering readers a level of detail and complexity that is both realistic and illustrative of key concepts in prevention, assessment, and treatment. In all, the study guide offers 93 cases and 290 multiple-choice questions covering every chapter in the text. In addition, more than 50 tables and figures are included to summarize vital information and illustrate important ideas. All of us in biomedicine understand the urgency of getting experimental results into print as quickly as possible. Yet this critical step in the cascade from research conception to publication receives almost no attention in our formal training. It is as if we have been put to sea without a compass. Our collective failure to achieve widespread literacy in our own language – Biomedical Language – seriously impedes the important process of disseminating new biomedical knowledge and thereby improving the human condition. It is also a significant personal concern for researchers and clinicians in the highly competitive, publish-or-perish environment of contemporary academia. Of course, if we are clever or lucky enough to come up with that Nobel Prize-winning discovery, great science will carry the day and we are likely to get published even if our writing is fairly horrid. But most of

us who publish are “bread-and-butter” scientists. We compete for space in journals which may only accept 10% or 20% of the submissions that they receive each year. For us, convincing, engaging writing will make the difference between being published or rejected, or at least it will make the difference between being published on ? rst submission or having to go through a number of revisions (or journals). None of this is to propose that good writing can make a silk purse out of a sow’s ear. Scientific content is the sine qua non of biomedical writing.

Integrating recent research and developments in the field, this revised second edition introduces an easy-to-master strategy for developing and writing culturally sensitive case conceptualizations and treatment plans. Also new to this edition is a chapter on couple and family case conceptualizations, and an emphasis throughout on trauma. Practitioners, as well as graduate students in counseling and in clinical psychology, will gain the essential skills and knowledge they need to master case conceptualizations.
