Event Cognition Gabriel A. Radvansky, Jeffrey M. Zacks, 2014-06-09 Much of our behavior is guided by our understanding of events. We perceive events when we observe the world unfolding around us, participate in events when we act on the world, simulate events that we hear or read about, and use our knowledge of events to solve problems. In this book, Gabriel A. Radvansky and Jeffrey M. Zacks provide the first integrated framework for event cognition and attempt to synthesize the available psychological and neuroscience data surrounding it. This synthesis leads to new proposals about several traditional areas in psychology and neuroscience including perception, attention, language understanding, memory, and problem solving. Radvansky and Zacks have written this book with a diverse readership in mind. It is intended for a range of researchers working within cognitive science including psychology, neuroscience, computer science, philosophy, anthropology, and education. Readers curious about events more generally such as those working in literature, film theory,

and history will also find it of interest.

Radvansky, 2015-08-20 Provides students with a guide to human memory, its properties, theories about how it works, and how studying it can help us understand who we are and why we do the things that we do. For undergraduate and graduate courses in Human Memory. This book provides a very broad range of topics covering more territory than most books. In addition to some coverage of basic issues of human memory and cognition that are of interest to researchers in the field, the chapters also cover issues that will be relevant to students with a range of interests including those students interested in clinical, social, and developmental psychology, as well as those planning on going on to medical and law schools. Stereotyping and Prejudice Charles Stangor, Christian S. Crandall, 2013-07-24 This volume presents a contemporary and comprehensive overview of the great diversity of theoretical interests, new ideas, and practical applications that characterize social psychological approaches to stereotyping and prejudice. All the contributions are written by renowned scholars in the field, with some chapters focusing on fundamental principles, including research questions about the brain structures that help us categorize and judge others, the role of evolution in prejudice, and how prejudice relates to language, communication, and social norms. Several chapters review a new dimension that has frequently been understudied—the role of the social context in creating stereotypes and prejudice. Another set of chapters focuses on applications, particularly how stereotypes and prejudice really matter in everyday life. These chapters include studies of their impact on academic performance, their role in small group processes, and their influence on everyday social interactions. The volume provides an essential resource for students, instructors, and researchers in social and personality psychology, and is also an invaluable reference for academics and professionals in related fields who have an interest in the origins and effects of stereotyping and prejudice.
