With her characteristic brilliance, grace and radical audacity, Angela Y. Davis has put the case for the latest abolition movement in American life: the abolition of the prison. As she quite correctly notes, American life is replete with abolition movements, and when they were engaged in these struggles, their chances of success seemed almost unthinkable. For generations of Americans, the abolition of slavery was sheerest illusion. Similarly, the entrenched system of racial segregation seemed to last forever, and generations lived in the midst of the practice, with few predicting its passage from custom. The brutal, exploitative (dare one say lucrative?) convict-lease system that succeeded formal slavery reaped millions to southern jurisdictions (and untold miseries for tens of thousands of men, and women). Few predicted its passing from the American penal landscape. Davis expertly argues how social movements transformed these social, political and cultural institutions, and made such practices untenable. In *Are Prisons Obsolete?*, Professor Davis seeks to illustrate that the time for the prison is approaching an end. She argues forthrightly for "decarceration", and argues for the transformation of the society as a whole.

further study. Peter Atrillis is a freelance academic and author working with leading institutions in the UK, Europe and SE Asia. He has previously held posts as Head of Business and Management and Head of Accounting and Law at University of Plymouth Business School. Building on his pathbreaking, award-winning bestseller, *Relevance Lost*, H. Thomas Johnson presents a devastating critique of the top-down hierarchical accounting systems that have dominated American corporations since the 1950s. In *Relevance Regained*, Johnson shows exactly how "managing by remote control" through results-oriented accounting information has obstructed the real business objective: to reduce process variation and lead times for the purpose of obtaining and keeping satisfied customers. The failure of most American businesses to be competitive and profitable, he contends, is their reliance on management accounting information to control people's actions and productivity. Cost-focused imperatives from on high must be replaced, Johnson asserts, with information systems that link actions with imperatives of global competition. Self-managing work teams, according to Johnson, must own problem-solving information to reduce variation, delays, and excess in processes. Johnson prescribes the necessary changes in management principles that must replace the outdated style associated with the industrial revolution. Responsiveness to customers—not accounting costs—and flexibility—reducing lead times and removing constraints—are necessary for sustained competitive excellence and long-term profitability. Johnson discusses the radical overhauls of companies, such as General Electric's work-outs/"best practices" program and Harley-Davidson's work simplification programs, and shows how these strong commitments to new strategies maximize a company's most important assets: people and time. To be globally competitive, he claims, a company's work must be directed toward selling to customers, not just selling products.

Jiji's extensive understanding of how students think and learn, what they find difficult, and which elements need to be stressed is integrated in this work. He employs an organization and methodology derived from his experience and presents the material in an easy to follow form, using graphical illustrations and examples for maximum effect. The second, enlarged edition provides the reader with a thorough introduction to external turbulent flows, written by Glen Thorncraft. Additional highlights of note: Illustrative examples are used to demonstrate the application of principles and the construction of solutions, solutions follow an orderly approach used in all examples, systematic problem-solving methodology emphasizes logical thinking, assumptions, approximations, application of principles and verification of results. Chapter summaries help students review the material. Guidelines for solving each problem can be selectively given to students.
