This book provides a detailed general overview of the human factors and performance limitations associated with flying fast jets, integrating all the latest available research literature on the demanding operational tasks faced by such pilots and aircrews. As such, it has a strong military focus, dealing with pilots of fighter aircraft, attack aircraft and lead-in fighter trainer aircraft that are traditionally only single or dual pilot operations. The book deals not only with the issue of G force, but discusses ejection and escape/survival, disorientation, high altitude physiology, pilot training and selection, helmet-mounted equipment, situational awareness, data fusion and multi-sensor integration, human machine interface issues and advanced cockpit design. It examines the human performance issues associated with the technological advances made in fast jets, such as increased manoeuvrability, increased use of the pilot's head as a mounting platform for sensor and weapons systems, and the complexities involved in the human-machine interface within these aircraft.

A Prescription for Healthy Living: A Guide to Lifestyle Medicine takes an evidence-based approach to health promotion and disease prevention. Medical doctors, healthcare professionals and research scientists from a variety of backgrounds provide

informed advice on how to encourage patients to take charge of their health and future. This book addresses the impact that socioeconomic and environmental factors have on the health of a population and explores the psychology of health-related behavioral change, as well as considering a variety of subject areas as diverse as nutrition, physical activity, the practice of gratitude, the adverse health impacts of loneliness and the importance of achieving a satisfactory work-life balance. A Prescription for Healthy Living aims to encourage and inspire healthcare practitioners and public health officials to empower patients to make simple behavioral changes that will have a large and positive effect on their physical and mental wellbeing. Written by qualified medical professionals and research scientists from a variety of specialties Addresses a variety of health promotion, disease prevention and wellbeing topics Provides evidence-based information in a digestible and actionable way

Directory of Corporate Counsel, 2021 Edition

The Aviation Contaminated Air Reference Manual is the first ever fully referenced 800+ page summary of the complete aircraft contaminated air issue in which crews and passengers have been exposed to oil and hydraulic fumes in aircraft cabins. The reference manual, which is the result of nearly ten years of research, is aimed at policy makers, doctors, scientists, air accident investigators, engineers,

crews, passengers, airline and union representatives, politicians and media involved or interested in any aspect of the contaminated air debate on commercial and military aircraft. Essential reading for business leaders and policymakers, an in-depth investigation of red teaming, the practice of inhabiting the perspective of potential competitors to gain a strategic advantage

Red teaming. The concept is as old as the Devil's Advocate, the eleventh-century Vatican official charged with discrediting candidates for sainthood. Today, red teams are used widely in both the public and the private sector by those seeking to better understand the interests, intentions, and capabilities of institutional rivals. In the right circumstances, red teams can yield impressive results, giving businesses an edge over their competition, poking holes in vital intelligence estimates, and troubleshooting dangerous military missions long before boots are on the ground. But not all red teams are created equal; indeed, some cause more damage than they prevent. Drawing on a fascinating range of case studies, Red Team shows not only how to create and empower red teams, but also what to do with the information they produce. In this vivid, deeply-informed account, national security expert Micah Zenko provides the definitive book on this important strategy -- full of vital insights for decision makers of all kinds.

Best's Insurance Reports Life/health, United States & Canada Plunkett's Insurance Industry Almanac 2006 The Only Complete Reference To The Insurance And Risk Management Industry Plunkett Research, Ltd.

The insurance industry is rebounding from its poor financial results of a few years ago. Better risk management, higher premiums and increased use of underwriting information systems have led the way. Meanwhile, the insurance industry is increasingly globalized as cross-border investments and acquisitions continue at a rapid pace. Risk analysis has become more sophisticated. In addition, a large number of related services and technologies have a major influence on the insurance and risk management business. These services include e-commerce, call centers and information technologies. This carefully-researched book (which includes a database of leading companies on CD-ROM) is a complete insurance market research and business intelligence tool-- everything you need to know about the business of insurance and risk management, including Property & Casualty insurers; Life insurers; Personal Lines and Specialty Lines underwriters; Annuities; Reinsurance underwriters; Health Insurance; Globalization of the insurance industry; Insurance brokers; Consulting; and Online insurance trends. The book includes dozens of statistical tables, an industry glossary, a database of industry associations and professional organizations, and our in-depth profiles of more than 300 of the world's leading insurance companies,

both in the U.S. and abroad.

Serves as a useful reference to the American Health Care Industry and its leading corporations. This book provides comparisons of national health

expenditures, various technologies, patient populations, hospitals, clinics, corporations, research, Medicare, Medicaid, managed care, and many other areas of vital importance.

This report is a follow-up to an earlier report published in 2000 (HLP 121-I, session 1999-2000, ISBN 9780104442005), on air travel and health. That report acted as a stimulus to further research into the health of air crew and passengers, and led to a broader examination of such issues. The report also led to the setting up of the Aviation Health Working Group in 2001, and later the Aviation Health Unit, in 2003, within the Civil Aviation Authority (CAA), which acts as a focal point for aviation health in the UK. In this report the Committee sets out the current situation, and still finds issues that remain of concern, particularly the risk to air travellers of venous thromboembolism (VTE). A WHO study is to examine VTE risk for individuals with existing risk factors, and the Committee urges the Government to continue to support this project. The Committee also believes that further investigation into the effects of fumes on pilots and others should be continued. The Committee has set out a number of recommendations, including: that jet lag should be studied as a confounding effect of DVT; that the Government should explore ways to increase the research capacity in aviation health; that the CAA should implement the recommendations of its own

research into aircraft seating standards, and increase the minimum seat pitch to at least 28.2 inches; the Government should also review the level of air passenger duty levied on "premium economy" seating; also that the Government and airlines advise passengers on the proven benefits of good hygiene in the reduction of disease transmission, and that as part of their contingency plans airlines that are flying from areas affected by a pandemic, should provide bacterial wipes to passengers; that the Government and the AHU work together with airlines and others in providing consistent air travel advice to passengers on the risks associated with self-medicating with the intention of preventing DVT.

Early diagnosis of childhood epilepsy is important and often improves prognosis. Epilepsy starting in infancy or at preschool age may delay the normal development of the child. All children in whom epilepsy is suspected should always be referred urgently to specialist care for further investigations. Diagnosis of epilepsy is based on seizure history, supplemented by EEG recordings and imaging studies. Pharmacological treatment is chosen according to the type of epilepsy or syndrome. Medication that is inappropriate may lead to the aggravation of seizures or other neurological manifestations. The monitoring of the child's neurocognitive development and the provision of appropriate support are important in the treatment of childhood epilepsies. A part of childhood epilepsies are benign and self-limited. The possibility of epilepsy

surgery should be considered when the disease proves to be resistant to treatment.

Covers the business of insurance and risk management, and is a tool for market research, strategic planning, competitive intelligence or employment searches. This book contains trends, statistical tables and an industry glossary. It also provides profiles of more than 300 of the world's leading insurance companies.
