

Communication An Essential Aspect Of Diplomacy

This book is a collection of articles, written by both academics and practitioners as an evidence base for citizen engagement through information and communication technologies (ICTs). In it, the authors ask: how do ICTs empower through participation, transparency and accountability? Specifically, the authors examine two principal questions: Are technologies an accelerator to closing the “accountability gap” – the space between the supply (governments, service providers) and demand (citizens, communities, civil society organizations or CSOs) that requires bridging for open and collaborative governance? And under what conditions does this occur? The introductory chapters lay the theoretical groundwork for understanding the potential of technologies to achieving intended goals. Chapter 1 takes us through the theoretical linkages between empowerment, participation, transparency and accountability. In Chapter 2, the authors devise an informational capability framework, relating human abilities and well-being to the use of ICTs. The chapters to follow highlight practical examples that operationalize ICT-led initiatives. Chapter 3 reviews a sample of projects targeting the goals of transparency and accountability in governance to make preliminary conclusions around what evidence exists to date, and where to go from here. In chapter 4, the author reviews the process of interactive community mapping (ICM) with examples that support general local development and others that mitigate natural disasters. Chapter 5 examines crowdsourcing in fragile states to track aid flows, report on incitement or organize grassroots movements. In chapter 6, the author reviews Check My School (CMS), a community monitoring project in the Philippines designed to track the provision of services in public schools. Chapter 7 introduces four key ICT-led, citizen-governance initiatives in primary health care in Karnataka, India. Chapter 8 analyzes the World Bank Institute’s use of ICTs in expanding citizen project input to understand the extent to which technologies can either engender a new “feedback loop” or ameliorate a “broken loop”. The authors’ analysis of the evidence signals ICTs as an accelerator to closing the “accountability gap”. In Chapter 9, the authors conclude with the Loch Ness model to illustrate how technologies contribute to shrinking the gap, why the gap remains open in many cases, and what can be done to help close it. This collection is a critical addition to existing literature on ICTs and citizen engagement for two main reasons: first, it is expansive, covering initiatives that leverage a wide range of technology tools, from mobile phone reporting to crowdsourcing to interactive mapping; second, it is the first of its kind to offer concrete recommendations on how to close feedback loops.

Designing Cultures of Care brings together an international selection of design researchers who, through a variety of design approaches, are exploring the ways in which design intersects with cultures of care. Unique in its focus and disciplinary diversity, this edited collection develops an expanded discourse on the role and contribution of design to our broader social, cultural and material challenges. Based around a unifying critique of the proposition of care as a theoretical framework for undertaking design research in real world contexts, each chapter presents a case study of design research in action. This book aims to provide readers - both academics and practitioners - with insights into the possibilities and challenges of designing cultures of care. The disciplines represented in this collection include architecture, visual communication, participatory and social design, service design, critical and speculative design interventions and design ethnography. These case studies will provide real world insights that have relevance and value to design students at both undergraduate and postgraduate levels, and to researchers at all levels within and outside of the academy.

Food security will exist when all people, at all times, have physical and economic access to sufficient, safe and nutritious

food to meet their dietary needs and food preferences for an active and healthy life (as stated in the Rome Declaration in 1996). Given the dimension of the current global food crisis, food security means adopting effective and specific actions at individual, household, national, regional and global levels. Food security invites us to reflect upon ethical principles like human equity, justice between current and future generations, respect for human dignity and sustainable food production. We strive to maintain our basic ethical convictions and engage in societal debates about other important values. While we do this, we may have to change our ways of life and learn to create new priorities in the face of global responsibility. Science and technology are key tools to reach the Millennium Goals, providing both society and decision makers alike with relevant information and new options within an ethical framework. The contributions found in this publication bring together the perspectives of a diverse group of authors. Coming from the academic world, the public sector and non-governmental organisations (NGOs), they provide the latest views on 'Global food security: ethical and legal challenges'. This book brings together theoretical and empirical approaches to second language (L2) fluency and provides a state-of-the-art overview of current research on the topic. The strength of the volume lies in its interdisciplinarity: the chapters approach fluency from non-traditional starting points and go beyond disciplinary boundaries in their contributions. The volume includes chapters investigating fluency from an L2 perspective and integrates perspectives from related fields, such as psycholinguistics, sign language studies and L2 assessment. The book extends the common foci and approaches of fluency studies and offers new perspectives that enable readers to evaluate critically existing paradigms and models. This encourages the development of more comprehensive frameworks and directs future L2 fluency research into new areas of L2 learning and use.

"Le secret d'ennuyer est celui de tout dire." Voltaire (Discours sur l'homme) Atopic dermatitis (AD) is frequently seen by dermatologists and pediatricians, by allergologists, and by many practitioners. The amount of data on AD is vast as it has been recognized for a very long time, has a worldwide distribution, and has a chapter or section devoted to it in every textbook or review of skin diseases. Difficulty arises in evaluating certain aspects of this complex disease, for many studies have been concerned with only some of its facets and with small numbers of patients. In addition a monograph on AD should also try to encompass the important theoretical aspects of this fascinating disease. Therefore, the problem in presenting a monograph on AD lies more in the critical selection than in the gathering of information, much of which is conflicting. This applies both to basic data and to details. Furthermore, the many divergent opinions in almost every field make it extremely difficult to draw unanimous conclusions. Consequently, the author has no option but to quote antagonistic views, try to make a compromise between these, and express

his own opinion based on clinical experience and fundamental literary work.

Vinod Acharya presents a new existential interpretation of Nietzsche's philosophy. He contends that Nietzsche's peculiar form of existentialism can be understood only by undertaking a thorough analysis of his characterization and critique of metaphysics. This reading remedies the shortcomings of previous existential interpretations of Nietzsche, which typically view existentialism as concerned primarily with the meaning of individual existence, and therefore necessarily at odds with the abstraction and objectivity of metaphysical thought. Acharya argues that the approach of Nietzsche's philosophy, especially in his mature works, is to make the typical existential position foundational, and then to develop to the fullest the implications of this position. This meta-existential approach necessarily yields an ambiguous and open-ended critique of metaphysics. Taking issue with the Heideggerian, the poststructuralist, and the naturalistic interpretations, this book contends that Nietzsche neither simply overcomes metaphysics nor remains trapped within its confines. Acharya argues that an ever-renewed encounter with and critique of metaphysics is an essential aspect of Nietzsche's meta-existentialism.

With more than 16 million PDAs shipped to date, Palm has defined the market for handhelds, having dominated this class of computing devices ever since it began to outpace competitors six years ago. The company's strength is the Palm OS, and developers loyal to this powerful and versatile operating system have created more than 10,000 applications for it. Devices from Handspring, Sony, Symbol, HandEra, Kyocera, and Samsung now use Palm OS, and the number of registered Palm Developers has jumped to 130,000. If you know C or C++, and want to join those who are satisfying the demand for wireless applications, then Palm OS Programming: The Developer's Guide, Second Edition is the book for you. With expanded coverage of the Palm OS--up to and including the latest version, 4.0--this new edition shows intermediate to experienced C programmers how to build a Palm application from the ground up. There is even useful information for beginners. Everything you need to write a Palm OS application is here, from user interface design, to coding a handheld application, to writing an associated desktop conduit. All the major

development environments are discussed, including commercial products such as Metroworks CodeWarrior, Java-based environments such as Sun KVM and IBM VisualAge Micro Edition, and the Free Software Foundation's PRC-Tools or GCC. The focus, however, is C programming with CodeWarrior and PRC-Tools. New additions to the second edition include: A tutorial that takes a C programmer through the installation of necessary tools and the creation of a small handheld application. A new chapter on memory, with a comprehensive discussion of the Memory Manager APIs. Greatly expanded discussions of forms, forms objects, and new APIs for the Palm OS. Updated chapters on conduits that reflect the newer Conduit Development Kit. This book explores the differences in cultural attributes and management factors to enable managers working for Japanese contractors to reduce misunderstandings and misinterpretations when communicating with project team members from different cultural backgrounds. It focuses on Japanese contractors operating in Singapore, since the Singapore construction industry has, for many years, been one of the largest overseas construction markets for the top-5 Japanese contractors. Using Hofstede's national cultural framework for the cultural studies in construction project management, it reveals various real-world management practices and discusses national cultural differences relating to managers working for Japanese contractors in Singapore as well as the communication weaknesses of current management practices and styles. The results presented provide useful lessons for Japanese contractors operating in Singapore, as well as other parts of the world, to bridge cultural and communication gaps. This volume contains the proceedings of the 11th International Conference on Concurrency Theory (CONCUR 2000) held in State College, Pennsylvania, USA, during 22-25 August 2000. The purpose of the CONCUR conferences is to bring together researchers, developers, and students in order to advance the theory of concurrency and promote its applications. Interest in this topic is continuously growing, as a consequence of the importance and ubiquity of concurrent systems and their applications, and of the scientific relevance of their foundations. The scope covers all areas of semantics, logics, and verification techniques for concurrent systems. Topics include concurrency related aspects of: models of computation, semantic domains, process algebras, Petri nets, event structures, real-time systems, hybrid systems, decidability, model-checking, verification techniques, refinement techniques, term and graph rewriting, distributed programming, logic constraint programming, object-oriented programming, typing systems and algorithms, case studies, tools, and environments for programming and verification. The first two CONCUR conferences were held in Amsterdam (NL) in 1990 and 1991. The following ones in Stony Brook (USA), Hildesheim (D), Uppsala (S), Philadelphia (USA), Pisa (I), Warsaw (PL), Nice (F), and Eindhoven (NL). The proceedings have appeared in Springer LNCS, as Volumes 458, 527, 630, 715, 836, 962, 1119, 1243, 1466, and 1664.

Science and technology are embedded in virtually every aspect of modern life. As a result, people face an increasing need to integrate information from science with their personal values and other considerations as they make important life decisions about medical care, the safety of foods, what to do about climate change, and many other issues. Communicating science effectively, however, is a complex task and an acquired skill. Moreover, the approaches to communicating science that will be most effective for specific audiences and circumstances are not obvious. Fortunately, there is an expanding science base from diverse disciplines that can support science communicators in making these determinations. *Communicating Science Effectively* offers a research agenda for science communicators and researchers seeking to apply this research and fill gaps in knowledge about how to communicate effectively about science, focusing in particular on issues that are contentious in the public sphere. To inform this research agenda, this publication identifies important influences—psychological, economic, political, social, cultural, and media-related—on how science related to such issues is understood, perceived, and used.

These essays by 11 outstanding scholars are "a valuable and stimulating contribution to an aspect of contemporary political development—the use, neglect, or abuse of communication—which does not receive sufficient attention. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.
