This report introduces two general methods of accounting—the cash basis method and accrual basis method. The choice of accounting method determines the timing of the recognition of revenue and expenses. Under cash basis accounting, revenue and expenses are recorded when cash is actually paid or received. Under accrual basis accounting, revenue is recorded when it is earned and expenses are reported when they are incurred. Understanding the differences between these two accounting methods could be helpful to Congress as it considers reforming the tax system and changing the federal government's financial reporting requirements. Currently with certain exceptions, the Internal Revenue Code (IRC) requires some companies with gross receipts in excess of \$5 million to use accrual basis, instead of cash basis, of accounting to determine their tax liabilities. The IRC's requirement to use the accrual method, arguably, ensures that revenue and the expenses incurred to generate that revenue are realized in the same year. Types of companies that may be excepted from using accrual basis of accounting for income taxes are sole proprietors and certain qualified personal service corporations (PSCs) in such fields as health, law, engineering, accounting, performing arts, and consulting firms, as well as farms that are not corporations or do not have a corporate partner. Some Members of Congress have put forth proposals to revise the circumstances under which certain companies are able to use cash method. House Ways and Means Committee Chairman Dave Camp introduced H.R. 1, the Tax Reform Act of 2014, on December 10, 2014. Among the changes proposed in the bill is the requirement that some partnerships, S corporations, and PSCs use the accrual method instead of the cash method to determine their federal taxable liability. Specifically, these business types would be required to use the accrual method if their average annual gross receipts exceeded \$10 million. Former Senate Committee on Finance Chairman Max Baucus included a similar provision in his Cost Recovery and Accounting staff discussion draft, which has not been formally introduced as legislation. The Small Business Accounting and Tax Simplification Act (H.R. 947), Start-up Jobs and Innovation Act (S. 1658), and Small Business Tax Certainty and Growth Act (S. 1085), introduced in the 113th Congress, would raise the gross receipt test limit from \$5 million to \$10 million. The President's budget is prepared primarily using cash basis. The Financial Report of the United States Government is prepared using both accrual and modified cash basis. For the past 17 years, the Government Accountability Office (GAO) has issued a disclaimer of opinion on the Financial Report of the United States Government. One of the reasons stated by GAO for the disclaimer of opinion for the 2013 financial report was that the federal government's process for preparing the consolidated financial statements was ineffective to determine whether the financial reports were presented fairly in accordance with U.S. Generally Accepted Accounting Principles (GAAP). A number of congressional proposals would change how the U.S. government's financial reports are prepared. In the 113th Congress, the GAAP Act (H.R. 476) and H.Res. 545 would require the federal government's budget, financial reports, and performance evaluation reports to be

prepared using both cash and accrual method. This report introduces the difference between cash and accrual methods by providing an overview of concepts and theories that underlie these accounting methods. It then explores these concepts through the business cycle of a fictitious small business and how the basis of accounting would affect the financial condition of the business.

Although the need to expand the boundaries of financial reporting has been discussed since the mid-1990s, little consideration has been given to the evolution and discourses of integrated reporting of non-financial aspects. Yet by investigating how and why an organisation defines and its reporting boundaries, it is possible to understand what is truly "valued" (or not) in its business model. This innovative book reviews the guidelines and frameworks from the major relevant international organisations including: the International Accounting Standards Board, Global Reporting Initiative, Sustainability Accounting Standards Board, International Integrated Reporting Council, Carbon Disclosure Standards Board, and the World Intellectual Capital Initiative, and analyses their development and impact on the boundaries of financial and non-financial reporting. Illustrated with case studies and interviews with representatives of these organisations, this concise volume makes a significant contribution to the future of reporting theory and practice. It will be of great interest to advanced students, researchers, practitioners and policy makers.

Bachelor Thesis from the year 2017 in the subject Business economics - General, grade: 1.7, Fachhochschule Bonn-Rhein-Sieg, language: English, abstract: The general aim of this present thesis is to gain insight into the economic situation of both companies from published annual reports and then into the development of Huawei and Ericsson within six years, since other sources of financial data are not available to outsiders, and the analysis of the consolidated financial statements of Huawei and Ericsson, which was prepared in accordance with IFRSs, within the six year period, gives insights into the economic situation of the two companies. To be more precise, the objectives of this essay are to

analyze the financial statements of those two communication technology companies using various financial indicators in order to evaluate both balance sheets' structures, liquidity situations and performances, then to perform a comparison between those two companies in order to study the development of both companies during the last six years and to find out how Huawei overtook its rival Ericsson and whether this success and continuous growth is still sustainable in the current global economic recession and financial crisis as well as in the future. This thesis's main task is to compare the analytic results of the two firms from 2011 to 2016 in order to find out to what extent Huawei has surpassed Ericsson, using the instruments of financial statement analysis. First, using the principle of Küting and Weber, we reformulated the financial statements of the two companies to make them more comparable, and then we calculated the necessary key ratios extracted from annual financial reporting so that we can make comparison and outline the company's status in three aspects, i.e. structure, liquidity, and performance. At last, after comparison of ratios of the two companies conclusions were drawn.

Gain a deeper understanding of Asian financial reporting and how to detect irregularities The Asian region, and particularly China, is becoming a hotbed of investment activity. There have been quite a few accounting scandals in Asia in the recent years – now rivaling those we have seen in the Americas and Europe. Assessing potential or active overseas investments requires reliance on financial statements, the full parameters of which may vary from region to region. To effectively analyze statements, it is necessary to first understand the framework underlying these financial statements and then lay out a protocol for detecting irregularities. It's impossible to create and implement a practical plan without a deeper knowledge of the various factors at play. Asian Statement Analysis: Detecting Financial Irregularities provides a framework for analysis that makes irregularities stand out. Authors Chin Hwee Tan and Thomas R. Robinson discuss international financial reporting standards, including characteristics particular to the Asian region. Tan and Robinson's combined background in academia and Asian finance give them a multi-modal perspective and position them as top authorities on the topic. In the book, they address issues such as: Detection of irregularities independent of particular accounting rules The most common irregularities in the Asian market Similarities and differences between U.S. and Asian accounting techniques An overarching framework for irregularity detection The book uses real-world examples to illustrate the concepts presented, with the focus on Asian companies. As the first ever in-depth study on manipulation and irregularities in the Asian market, Asian Financial Statement Analysis: Detecting Financial Irregularities is uniquely positioned to be a valuable resource in the move toward the next phase of global reporting standards.

Thesis (M.A.) from the year 2011 in the subject Business economics - Banking, Stock Exchanges, Insurance, Accounting, grade: Very Good, Mekelle University, language: English, abstract: The objective of the study was to

compare the financial performance of commercial Banks by using their average ratio in terms of profitability, liquidity, efficiency, and solvency. In this study by using excel analyzed information was presented by statistical measures like graphs and tables. Both the trend and comparative financial performance analysis approaches were used. Five years audited financial reports from 2005 to 2009 of the commercial banks were taken for comparison purpose. Those commercial banks taken for comparison were Commercial Bank of Ethiopia, Dashen Bank Share Company, Bank of Abyssinia, United Bank, Wegagen Bank, and Nib International Bank. Year of establishment, amount of capital reserve, and number of branches are taken as a criterion for selecting these commercial banks for analysis purpose. In addition to data gathered from secondary sources, unstructured interview was conducted on problem and prospects related to the financial performance of commercial banks and the responses were presented. The respective ratios of each bank are compared with the average ratios of the six commercial banks taken for the study. Then trend analyses of six commercial banks taken in this study are presented by using the above ratios. In both the financial performance analysis approaches i.e., the trend and comparative analysis, Commercial Bank of Ethiopia (CBE) showed good performance in financial ratios of Profitability, Liquidity, and Solvency ratio, but Bank of Abyssinia(BOA) has showed weak performance in all above explained financial ratios. From this, it is concluded that CBE was profitable and functionally efficient and BOA is less profitable and the earning capacity of the bank is weak. Therefore, in order to improve profitability the management of BOA must increase management efficiency by reducing administrative expenses to the best possible level, efficiently control costs and utilize customers deposit, dispose of the assets which are not contributing for the profitability of the banks and work to maximize the overall profitability of the bank through investing in profitable avenue.

The hidden brain is the voice in our ear when we make the most important decisions in our lives—but we're never aware of it. The hidden brain decides whom we fall in love with and whom we hate. It tells us to vote for the white candidate and convict the dark-skinned defendant, to hire the thin woman but pay her less than the man doing the same job. It can direct us to safety when disaster strikes and move us to extraordinary acts of altruism. But it can also be manipulated to turn an ordinary person into a suicide terrorist or a group of bystanders into a mob. In a series of compulsively readable narratives, Shankar Vedantam journeys through the latest discoveries in neuroscience, psychology, and behavioral science to uncover the darkest corner of our minds and its decisive impact on the choices we make as individuals and as a society. Filled with fascinating characters, dramatic storytelling, and cutting-edge science, this is an engrossing exploration of the secrets our brains keep from us—and how they are revealed.

The field can be divided into five parts: (1) Information and Methodology for Financial Analysis; (2) Alternative Finance Theories and Cost of Capital; (3) Capital Budgeting and Leasing Decisions; (4) Corporate Policies and their Interrelationships; (5) Financial Planning and Forecasting. The theories used and discussed in this book can be grouped into the following classical theoretical areas of corporate finance: (1) Pre-M&M Theory, (2) M&M Theory, (3) CAPM, and (4) Option Pricing Theory (OPT). The interrelationships among these theories are carefully analyzed. Real world examples are used to enrich the learning experience; and alternative planning and forecasting models are used to show how the interdisciplinary approach can be used to make meaningful financial-management decisions. In this third edition, we have extensively updated and expanded the topics of financial analysis, planning and forecasting. New chapters were added, and some chapters combined to present a holistic view of the subject and much of the data revised and updated.
