This comprehensive, first-of-its kind title is an indispensable resource for pharmacists looking to learn or improve crucial patient assessment skills relevant to all pharmacy practice settings. Pharmacists' role as health care practitioners is evolving as they are taking a more active part in primary patient care -- helping patients manage their medications and diseases, providing patient education, and, in some jurisdictions, prescribing and adapting medications. To perform their day-to-day duties, pharmacists are best-served using a framework called the patient care process. This framework involves three steps: patient assessment; care plan development and implementation; and monitoring and follow up. Organized in four parts, this practical book begins with introductory chapters regarding the basics of patient assessment and the patient care process. Part II includes a detailed assessment of common symptoms encountered by pharmacists. Part III discusses assessment of patients with various chronic illnesses. Part IV addresses select specialized topics and assessment considerations. An invaluable contribution to the literature, *Patient Assessment in Clinical Pharmacy: A Comprehensive Guide* will be of great benefit to pharmacists, regardless of their practice setting, and to pharmacy students as well.

The reconstruction of ancient Mesopotamian medical, ritual and omen compendia and their complex history is still characterised by many difficulties, debates and gaps due to fragmentary or unpublished evidence. This book offers the first complete edition of the Assur Medical Catalogue, an 8th or 7th century BCE list of therapeutic texts, which forms a core witness for the serialisation of medical compendia in the 1st millennium BCE. The volume presents detailed analyses of this and several other related catalogues of omen series and rituals, constituting the corpora of divination and healing disciplines. The contributions discuss links between catalogues and textual sources, providing new insights into the development of compendia between serialization, standardization and diversity of local traditions. Though its a novel corpus-based approach, this volume revolutionizes the current understanding of Mesopotamian medical texts and the healing disciplines of "conjurer" and "physician". The research presented here allows one to identify core text corpora for these disciplines, as well as areas of exchange and borrowings between them.

This treatise had its origins in the authors' strong opinion that the discovery of new drugs, especially of innovative therapeutic agents, really does not happen as a spontaneous sequel to investigative research, no matter how penetrating such research may be. Rather, it seemed to us that the discovery of innovative therapeutic agents was a very active process, existing in and of itself, and demanding full attention-it was not simply a passive, dependent by-product of investigative research. And yet, many researchers some close confreres of the authors, others more distant-believed otherwise. We felt that their view reflected unrealistic thinking and that reality probably lay closer to what Beyer" maintained: We are taught to believe that if we can understand a disease it should be easy enough to figure out, say, the molecular configuration of a definitive receptor mechanism somewhere along the line and to design a specific drug . . . . And so we start out to understand the disease but never get around to doing much about therapy. The authors very soon realized that there was essentially no quantitative information available on just where and how innovative therapeutic agents were discovered. There were only anecdotal accounts, and these were able to be selected and presented in ways that could be used to defend any point of view.

Since the publication of the Institute of Medicine (IOM) report *Clinical Practice Guidelines We Can Trust* in 2011, there has been an increasing emphasis on assuring that clinical practice guidelines are trustworthy, developed in a transparent fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality (AHRQ), American Psychiatric Association (APA) has adopted a new process for practice guideline development. Under this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process, recommendations are determined by weighing potential benefits and harms of an intervention in a specific clinical context. Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent organization, which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment; assessment of suicide risk; assessment for risk of aggressive behaviors; assessment of cultural factors; assessment of medical health; quantitative assessment; involvement of the patient in treatment decision making; and documentation of the psychiatric evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care.

For thirty years, Peter Singer's Practical Ethics has been the classic introduction to applied ethics. For this third edition, the author has revised and updated all the chapters and added a new chapter addressing climate change, one of the most important ethical challenges of our generation. Some of the questions discussed in this book concern our daily lives. Is it ethical to buy luxuries when others do not have enough to eat? Should we buy meat from intensively reared animals? Am I doing something wrong if my carbon footprint is above the global average? Other questions confront us as concerned citizens: equality and discrimination on the grounds of race or sex; abortion, the use of embryos for research and euthanasia; political violence and terrorism; and the preservation of our planet's environment. This book's lucid style and provocative arguments make it an ideal text for university courses and for anyone willing to think about how she or he ought to live.

Edible insects have always been a part of human diets, but in some societies there remains a degree of disdain and disgust for their consumption. Insects offer a significant opportunity to merge traditional knowledge and modern science to improve human food security worldwide. This publication describes the contribution of insects to food security and examines future prospects for raising insects at a commercial scale to improve food and feed production, diversify diets, and support livelihoods in both developing and developed countries. Edible insects are a promising alternative to the conventional production of meat, either for direct human consumption or for indirect use as feedstock. This publication will boost awareness of the many valuable roles that insects play in sustaining nature and human life, and it will stimulate debate on the expansion of the use of insects as food and feed.

From the physician behind the wildly popular NutritionFacts website, *How Not to Die* reveals the groundbreaking scientific evidence behind the only diet that can prevent and reverse many of the causes of disease-related death. The vast majority of premature deaths can be prevented through simple changes in diet and lifestyle. In *How Not to Die*, Dr. Michael Greger, the internationally-renowned nutrition expert, physician, and founder of NutritionFacts.org, examines the fifteen top causes of premature death in America—heart disease, various cancers, diabetes, Parkinson's, high blood pressure, and more—and explains how nutritional and lifestyle interventions can sometimes trump prescription pills and other pharmaceutical and surgical approaches, freeing us to live healthier lives. The simple truth is that most doctors are good at treating acute illnesses but bad at preventing chronic disease. The fifteen leading causes of death claim the lives of 1.6 million Americans annually. This doesn't have to be the case. By following Dr. Greger's advice, all of it backed up by strong scientific evidence, you will learn which foods to eat and which lifestyle changes to make to live longer. History of prostate cancer in your family? Put down that glass of milk and add flaxseed to your diet whenever you can. Have high blood pressure? Hibiscus tea can work better than a leading hypertensive drug—and without the side effects. Fighting off liver disease? Drinking coffee can reduce liver inflammation. Battling breast cancer? Consuming soy is associated with prolonged survival. Worried about heart disease (the number 1 killer in the United States)? Switch to a whole-food, plant-based diet, which has been repeatedly shown not just to prevent the disease but often stop it in its tracks. In addition to showing what to eat to help treat the top fifteen causes of death, *How Not to Die* includes Dr. Greger's Daily Dozen—a checklist of the twelve foods we should consume every day. Full of practical, actionable advice and surprising, cutting edge nutritional science, these doctor's orders are just what we need to live longer, healthier lives.

This Open access book offers updated and revised information on vessel health and preservation (VHP), a model concept first published in poster form in 2008 and in *JVA* in 2012, which has received a great deal of attention, especially in the US, UK and Australia. The book presents a model and a new way of thinking applied to vascular access and administration of intravenous treatment, and shows how establishing and maintaining a route of access to the bloodstream is essential for patients in acute care today. Until now, little thought has been given to an intentional process to guide selection, insertion and management of vascular access devices (VADs) and by default actions are based on crisis management when a quickly selected VAD fails. The book details how VHP establishes a framework or pathway model for each step of the patient experience, intentionally guiding, improving and eliminating risk when possible. The evidence points to the fact that reducing fragmentation, establishing a pathway, and teaching the process to all stakeholders reduces complications with intravenous therapy, improves efficiency and diminishes cost. As such this book appeals to bedside nurses, physicians and other health professionals. *Psychotherapy for the Advanced Practice Psychiatric Nurse* provides the nurse psychotherapist with a useful "how-to" primer that contains practical techniques and interventions without a lot of theoretical jargon. Topics include the basics of psychotherapy, from how to respond to a patient's initial call to termination of care. Selected approaches, interpersonal, cognitive-behavioral, and psychodynamic psychotherapy are highlighted with discussion of evidence-based research. Specific techniques for working with commonly seen patient populations that require special consideration: those who have experienced trauma, children, and older adults are included. In addition, how to integrate psychopharmacology and psychotherapy is discussed in detail. A straightforward approach to psychotherapy using a holistic nursing framework. Latest findings on the neurophysiology of psychotherapy including research on attachment, therapeutic relationships, and trauma. Evidence-based research for all approaches and populations discussed. Provides treatment hierarchy for decision making in selecting strategies for treatment from the initial contact and assessment to termination. Step-by-step guide to building the nurse-patient relationship in order to achieve quality outcomes. Includes detailed instructions on therapeutic communication techniques. Detailed instructions teach you how to use the latest therapeutic communication techniques. Includes all patient populations from children to the older adult with special emphasis on working with traumatized patients. Comprehensive appendices provide quick access to helpful forms and diagnostic tools specific to psychotherapy nursing practice.

Print and use with clients right away!! Praise for 101 Trauma-Informed Interventions: "Linda Curran's unflagging energy and dedication to the healing of traumatized individuals has led to a voluminous, exciting, and comprehensive, 101 Trauma Informed

Interventions. This workbook provides a plethora of effective tools -- traditional as well as innovative -- that can be used in whole or as a part of a course of therapy and also as self-help. The variety of options offered goes a long way towards dispelling the (unfortunately) popular misconception that there are only a limited number of interventions that help people to recover from trauma. Survivors as well as therapists who have been frustrated by the rigidity of strict adherence to evidence based practice will be greatly relieved to find a wealth of useful strategies to experiment, evaluate, and sort into a personally tailored trauma recovery program. This workbook is a god-send for the trauma field, expanding the possibilities for recovery in a most generous way." ~ Babette Rothschild, MSW author of *The Body Remembers* and *8 Keys to Safe Trauma Recovery* "Linda Curran has carefully and knowledgeably curated a practical, effective collection of interventions that actually work for trauma survivors. Any clinician committed to helping those suffering from posttraumatic stress needs to have these tools and resources to draw upon, because standard talk therapy, nine times out of ten, is simply not going to cut it. These exercises will." ~ Belleruth Naparstek, LISW, author of *Invisible Heroes: Survivors of Trauma and How They Heal* "Drawing from the whole spectrum of trauma-based therapies, Linda Curran has compiled a sampling of practical exercises designed to help therapists and their clients better navigate the mine field that trauma work can be and find the path to healing." ~ Richard Schwartz, Ph.D. author of *Internal Family Systems Therapy* "101 Trauma-Informed Interventions provides an accessible functional "playbook" for therapists committed to the rehabilitation of the client with a trauma history. In a readable volume Curran integrates diverse approaches of treatment and emphasizes the unique role that trauma plays in mental health. Underlying this eclectic strategy is the common theme emphasizing that healing will only begin when the trauma related feelings embedded in the body are appreciated." ~ Stephen W. Porges, Ph.D., author of *The Polyvagal Theory* "An interesting compendium of potential interventions that can be interwoven into any therapist's existing conceptual framework" ~ Louis Cozolino, Ph.D., Pepperdine University, and author of 5 books including the best-seller *The Neuroscience of Psychotherapy*, *Healing the Social Brain* (2nd edition)
