Discover the original international diet sensation—used by Adele, heavyweight champion David Haye, and Pippa Middleton—that will help you lose seven pounds in seven days while experiencing lasting energy and eating all the foods you love. Over the past few years, fasting has become a popular diet option. Studies show that fasting—whether through moderate calorie restriction every day or the more severe but less frequent intermittent fasting—can help people lose about thirteen to fourteen pounds in six months and reduce their risk of developing disease. When we fast, our body's energy stores activate what is known as sirtuins, or the "skinny gene," and many positive changes ensue. Fat storage is switched off, and our body stops its normal growth processes and goes into "survival" mode. Fat burning is stimulated and the genes involved in the repair and rejuvenation of our cells are turned on—which all results to weight loss and improved resistance to disease. But if not done correctly, fasting can lead to hunger, irritability, fatigue, and loss of muscle. Enter Sirtfoods: a newly discovered group of foods that is revolutionizing healthy eating. Ranging from chocolate and red wine to garlic and walnuts, sirtfoods are particularly rich in special nutrients that help us activate the same skinny genes in our bodies that fasting triggers. Nutritionists Aidan Goggins and Glen Matten have created The Sirtfood Diet to help you effectively lose weight and improve your resistance to disease, while still giving you incredible energy and glowing health.

This is the only book a man or woman needs to achieve the body he or she has always wanted anywhere—and without gear.

Finally, the solution to the #1 reason we don't exercise: time. Everyone has one minute. A decade ago, Martin Gibala was a young researcher in the field of exercise physiology—with little time to exercise. That critical point in his career launched a passion for high-intensity interval training (HIIT), allowing him to stay in shape with just a few minutes of hard effort. It also prompted Gibala to conduct experiments that helped launch the exploding science of ultralow-volume exercise. Now that he's the worldwide guru of the science of time-efficient workouts, Gibala's first book answers the ultimate question: How low can you go? Gibala's fascinating quest for the answer makes exercise experts of us all. His work demonstrates that very short, intense bursts of exercise may be the most potent form of workout available. Gibala busts myths ("it's only for really fit people"), explains astonishing science ("intensity trumps duration"), lays out time-saving life hacks ("exercise snacking"), and describes the fascinating health-promoting value of HIIT (for preventing and reversing disease). Gibala's latest study found that sedentary people derived the fitness benefits of 150 minutes of traditional endurance training with an interval protocol that involved 80 percent less time and just three minutes of hard exercise per week. Including the eight best basic interval workouts as well as four microworkouts customized for individual needs and preferences (you may not quite want to go all out every time), *The One-Minute Workout* solves the number-one reason we don't exercise: lack of time. Because everyone has one minute.
