Every company's ability to innovate depends on a process of experimentation whereby new products and services are created and existing ones improved. But the cost of experimentation is limiting. New technologies--including computer modeling and simulation--promise to lift that constraint by changing the economics of experimentation. They amplify the impact of learning, creating the potential for higher R&D performance and innovation and new ways of creating value for customers. Stefan H. Thomke argues that to unlock such potential, companies must not only understand the power of new technologies for experimentation, but also fundamentally change their processes, organization, and management of innovation. He shows why experimentation is so critical to innovation, explains the impact of new technologies, and outlines what managers must do to integrate them successfully.

In an age when pundits constantly decry overt political bias in the media, we have naturally become skeptical of the news. But the

bluntness of such critiques masks the highly sophisticated ways in which the media frame important stories. In *Front Page Economics*, Gerald Suttles delves deep into the archives to examine coverage of two major economic crashes—in 1929 and 1987—in order to systematically break down the way newspapers normalize crises. Poring over the articles generated by the crashes—as well as the people in them, the writers who wrote them, and the cartoons that ran alongside them—Suttles uncovers dramatic changes between the ways the first and second crashes were reported. In the intervening half-century, an entire new economic language had arisen and the practice of business journalism had been completely altered. Both of these transformations, Suttles demonstrates, allowed journalists to describe the 1987 crash in a vocabulary that was normal and familiar to readers, rendering it routine. A subtle and probing look at how ideologies are packaged and transmitted to the casual newspaper reader, *Front Page Economics* brims with important insights that shed light on our own economically tumultuous times. Clearly structured and offering a mix of case study and theoretical frameworks to explore each GA, practical guidance is offered at the end of each chapter on how to embed the relevant graduate

attribute whilst providing well-researched theoretical underpinning. The varied methods applied and methodological attitudes espoused will prove inclusive to a wide range of readers.
