In these times of change and challenge in higher education, pleas for leadership have become frequent. However, the type of leadership required within this new context (of globalization, demographic changes, technological advancement, and questioning of social authority) may call for different skills, requiring a re-education among campus stakeholders if they want to be successful leaders. In the past twenty years, there has been a revolution in the way that leadership is conceptualized across most fields and disciplines. Leadership has moved away from being leader-centered, individualistic, hierarchical, focused on universal characteristics, and emphasizing power over followers. Instead, a new vision has emerged: leadership that is process-centered, collective, context-bound, non-hierarchical, and focused on mutual power and influence processes. This volume summarizes research and literature about new conceptualizations of leadership to inform practice. This is volume 31, number 6, of the *ASHE Higher Education Report*, a bi-monthly journal published by Jossey-Bass. Values and Virtues in Higher Education Research centres on practitioners studying and researching their practices in higher education settings, in order to improve those practices for the benefit of others and themselves. Making research public is a key aspect of ensuring the quality of educational research and educational practices: Values and Virtues in Higher Education Research raises questions and develops conversations about why higher education practitioners should study and improve their work, how this may be done, and what might be some of the benefits of doing so. What we do as practitioners is influenced by and linked with what we value, what we believe is good. Improving practices therefore involves becoming aware of and interrogating the values that enter into and inform those practices; a study of practices becomes a study of the relationships between the practices in question and their values base. From an international group of contributors in this growing field, this book provides strong theoretical resources and case study material that shows how this transformation may be achieved, including topics such as: Theorising practices to show personal and organisational accountability Developing inter-professional and inter-disciplinary dialogues for social transformation Establishing communities of inquiry in higher education and other workplace settings Reconceptualising professional education as research-informed practice Locating educational theory in the real world for human and environmental wellbeing Showing the evolution of theory through critical engagement, this text will be a valuable companion for lecturers, students and professional developers in higher education. This book will form core reading for those who are interested in engaging in practice-based research, and as additional reading for those whose aim is to broaden their thinking in relation to the role of values and virtues in educational research. Jean McNiff is an independent researcher and writer, Professor of Educational Research at York St John University, and Visiting Professor at Oslo and Akershus University College, Beijing Normal University and Ningxia Teachers University. The evolution of sustainability, with a practical framework for integration Regenerative Development and Design takes sustainability to the next level, and provides a framework for incorporating regenerative design principles into your current process. The Regeneration Group is a coalition of experienced design, land-use, planning, business, and development professionals who represent the forefront of the movement; in this book, they explain what regenerative development is, how and why it works, and how you can incorporate the fundamental principles into your practice. A clear, focused framework shows you how to merge regenerative concepts with your existing work, backed by numerous examples that guide practical application while illustrating regenerative design and development in action. As the most comprehensive and systemic approach to regenerative development, this book is a must-have resource for architects, planners, and designers seeking the next step in sustainability. Regenerative design and development positions humans as co-creative and mutually-evolving participants in an ecosystem—not just a built environment. This book describes how to bring that focus to your design from the earliest stages. Understand the fundamentals of regenerative design and development Learn how regenerative development contributes to sustainability Integrate regenerative development concepts into practice Examine sample designs that embody the regenerative concept To create a design with true sustainability, considerations must extend far beyond siting, materials, and efficiency. Designers must look at the place, its inhabitants, and the purpose—the whole living ecosystem—and proceed with their work from that more humbling perspective. The finished product should itself be an ecosystem and sustainable economy, which is the root of the regenerative development approach. Sustainability has evolved, and the designer's responsibility has increased in kind. Regenerative Development and Design provides an authoritative resource for those ready to take the next step forward.
