Ayurveda is widely considered to be one of the oldest health care traditions still in practice today. Originating in India over 3,000 years ago, it is now increasingly recognized and practiced globally including in many European countries and the United States. Food and nutrition play a crucial role in the health care wisdom of Ayurveda. The Ayurvedic Science of Food and Nutrition discusses the various principles of healthy eating as prescribed by Ayurveda. Divided into three sections, it addresses the fundamentals, the clinical applications, and the future challenges of Ayurveda. Specifically, the book discusses issues such as the concept of diet, the use of food as medicine, especially to treat diabetes and cancer, convalescent food practices, and fasting therapy. The Ayurvedic Science of Food and Nutrition is unique in that it is one of the only books to investigate the scientific rationale behind Ayurveda, enabling this health care tradition to potentially be incorporated into a Western clinical practice model when this latter conventional therapy is found to be ineffective.

Psoriasis is a chronically relapsing inflammatory skin disorder affecting about 2% of the worldwide population. The disease is associated with important systemic manifestations, including cardiovascular comorbidities and metabolic syndrome. In addition, about 30% of patients develop joint inflammation known as psoriatic arthritis (PsA). Our knowledge on the pathogenesis of psoriasis has dramatically expanded in the last decade, suggesting the existence (or co-existence) of both auto-immune and auto-inflammatory components. Skin lesions develop from a complex interplay between keratinocytes, vascular endothelium, dendritic cells, and T cells, generating a self-sustaining inflammatory cycle. Within this cycle, epidermal CD8+ T lymphocytes specific for self-antigens may represent the major autoimmune mechanism. Despite the recent progress in the comprehension of the pathogenesis of psoriasis many questions remain open, ranging from the plaque-initiating events to the characterization of the autoimmune /autoinflammatory components of the disease. The mechanisms

that link cutaneous psoriasis to its extra-cutaneous and systemic manifestations also remain vague. In this Research Topic we invited top scientists to summarize the front-line research in the field of immunology of cutaneous psoriasis and its systemic and joint manifestations. Our intention was to integrate the pillar concepts of psoriasis immunopathology with the most novel insights, aiming at providing an advanced view of this rapidly evolving and fascinating field.

The field of microbial endocrinology is expressly devoted to understanding the mechanisms by which the microbiota (bacteria within the microbiome) interact with the host ("us"). This interaction is a two-way street and the driving force that governs these interactions are the neuroendocrine products of both the host and the microbiota. Chapters include neuroendocrine hormone-induced changes in gene expression and microbial endocrinology and probiotics. This is the first in a series of books dedicated to understanding how bi-directional communication between host and bacteria represents the cutting edge of translational medical research, and hopefully identifies new ways to understand the mechanisms that determine health and disease.?

Doctoral Thesis / Dissertation from the year 2007 in the subject Medicine - Alternative Medicine, grade: A (Gold Medalist), , course: MD (AYURVEDA), language: English, abstract: The Ayurveda is the holistic system of medicine successfully thriving since time immemorial owing to its strong foundation in the form of the basic principles which have not undergone any alteration since their inception. The Ayurveda classics mainly the Charaka and Sushruta Samhita (treatises) are a treasure of knowledge in a code form. These classics need to be reviewed in the new and contemporary scientific background to re validate their strength. The disease Anaemia is a very common ailment widely prevalent in India and the developing world. Ayurveda mentions Anaemia in the form of the depleted blood tissue (rakta dhatu in Ayurveda parlance) . The science of Ayurveda explained the inter-relationship of the tissues as the

increase of one tissue causes an increase in the other and vice versa. This principle of the inter-relationship is of great application both in the understanding of the physiology and the pathology followed by the application in the clinical practice. Ayurveda approves that treatment is the replenishment of the depleted and depletion of the overload/excess. In this work, this principle of inter-relationship is applied clinically. The medicines used are the Shatavari (*Asparagus racemosa*) and the Milk. These two drugs are natural tonics that are proved to be the augmenters of the first tissue namely the Rasa (Plasma in modern parlance). Thus, by increasing the Rasa there should be an increase in the second tissue of Rakta/Blood. This assessment of inter-relationship between the tissues is aimed clinically in this work. The clinical study has a two group division, treatment group and the standard control group. All the relevant investigations from the Ayurvedic methodology and the contemporary sciences have been carried out and assessed and evaluated through a special grading and research proforma. The necessary statistical tests like the paired 't' test has been utilized to understand the significance of the study. The results were discussed with the specialists and experienced and thus, the final conclusions drawn that indicate a very significant trend in proving the validity of the Ayurvedic fundamentals. The details of all this are presented in the text.
