Based on his long-term anthropological fieldwork in the semiarid north of the Kunene region in Namibia, the author describes and analyzes how the local Otjiherero-speaking pastoralists govern water usage after a decentralization reform of the rural water sector in the country. This book will be of interest to academics, policymakers, and practitioners who seek to better understand how water management institutions emerge, particularly at the intersection of state decentralization reforms and local practices in the Kunene Region, but also elsewhere in the world. This edited volume examines the group dynamics of social reconciliation in conflict-affected societies by adopting ideas developed in social psychology and the everyday peace discourse in peace and conflict studies. The book revisits the intra- and inter-group dynamics of social reconciliation in conflict-affected societies, which have been largely marginalised in mainstream peacebuilding debates. By applying social psychological perspectives and the discourse of everyday peace, the chapters explore the everyday experience of community

actors engaged in social and political reconciliation. The first part of the volume introduces conceptual and theoretical studies that focus on the pros and cons of state-level reconciliation and their outcomes, while presenting theoretical insights into dialogical processes upon which reconciliation studies can develop further. The second part presents a series of empirical case studies from around the world, which examine the process of social reconciliation at community levels through the lens of social psychology and discourse analysis. This book will be of much interest to students of peacebuilding, conflict resolution, social psychology, discourse analysis and international relations in general.

Dieses Lehrbuch bringt Studierenden die Relevanz des Konfliktmanagements in ihrer zukünftigen Rolle der Projektleitung anhand nationaler und internationaler Vorgaben und Erwartungshaltungen als Schlüsselkompetenz nahe. Es vermittelt Basiswissen zur Konfliktkompetenz durch Grundlagen der Konflikttheorie und der Kommunikation. Aufbauend auf der Differenzierung von Konflikten werden Methoden der Konfliktbearbeitung vorgestellt und über praktische Anwendungen Handlungsoptionen aufgezeigt. Darüber hinaus werden Möglichkeiten der Steuerung von Konflikten, die konkret auf das Baumanagement zugeschnitten sind, erläutert. Dazu gehören u. a. Partizipationsprozesse, Optionen der Vertragsgestaltung und der Aufbau geeigneter Organisations- und

Kommunikationsstrukturen. Das Buch berücksichtigt dabei, dass Konfliktkompetenz intensive Arbeit an sich selbst bedeutet, Haltung, Selbstreflexion und in Summe der Aufbau einer entsprechenden Konfliktkultur. Zahlreiche Beispiele sowie Reflexions-, Wissens-, und Praxisaufgaben veranschaulichen und vertiefen den Lernstoff. Das Buch gehört zur Lehrbuchreihe "erfolgreich studieren".

This textbook provides a comprehensive compilation of conceptual perspectives, methodological approaches and empirical insights of inter- and transdisciplinary sustainability science. Written by an international team of authors from leading sustainability institutions, the textbook covers key perspectives and topics of the scientific discourse on sustainable development. More than two decades after conceptualizing sustainability as societal guiding vision and regulative idea the necessity of concretizing and realizing sustainability in societal praxis is bigger than ever. Sharply improved individual and societal sustainable decision-making and action is necessary for a better future of humankind and the planet. On that account problem- and solution-oriented perspectives and competencies are crucial. The different chapters assemble an encompassing view of essential foundations and specific areas of research and action in sustainability science and practice. The textbook aims at fostering the further establishment of

sustainability science in higher education and to enable the next generation of sustainability experts to tackle the challenging and exciting topic of sustainable development.

Sustaining and strengthening local livelihoods is one of the most fundamental challenges faced by post-conflict countries. By degrading the natural resources that are essential to livelihoods and by significantly hindering access to those resources, conflict can wreak havoc on the ability of war-torn populations to survive and recover. This book explores how natural resource management initiatives in more than twenty countries and territories have supported livelihoods and facilitated post-conflict peacebuilding. Case studies and analyses identify lessons and opportunities for the more effective design of interventions to support the livelihoods that depend on natural resources – from land to agriculture, forestry, fisheries, and protected areas. The book also explores larger questions about how to structure livelihoods assistance as part of a coherent, integrated approach to post-conflict redevelopment. *Livelihoods and Natural Resources in Post-Conflict Peacebuilding* is part of a global initiative to identify and analyze lessons in post-conflict peacebuilding and natural resource management. The project has generated six books of case studies and analyses, with contributions from practitioners, policy makers, and researchers. Other books in this series

address high value resources, land, water, assessing and restoring natural resources, and governance.

This book constitutes the thoroughly refereed proceedings of the 20th International Symposium on Static Analysis, SAS 2013, held in Seattle, WA, USA, in June 2013. The 23 revised full papers presented together with 2 invited talks were selected from 56 submissions. The papers address all aspects of static analysis, including abstract domains, abstract interpretation, abstract testing, bug detection, data flow analysis, model checking, new applications, program transformation, program verification, security analysis, theoretical frameworks, and type checking.

"Global Trends 2025: A Transformed World" is the fourth unclassified report prepared by the National Intelligence Council (NIC) in recent years that takes a long-term view of the future. It offers a fresh look at how key global trends might develop over the next 15 years to influence world events. Our report is not meant to be an exercise in prediction or crystal ball-gazing. Mindful that there are many possible "futures," we offer a range of possibilities and potential discontinuities, as a way of opening our minds to developments we might otherwise miss. examine the current condition of cities due to capitalism. It brings together interdisciplinary insights from leading academics, activists and researchers to envision progressive, anti-capitalist changes for the future of cities. The exploitative nature of capitalist urbanization, as seen in the manifestation of modern cities, has threatened and affected life on Earth in unprecedented ways. This book unravels these threats to ecosystems and biodiversity and addresses the widening gap between the rich and the poor. It considers the future impacts of the capitalist urbanization on the planet and the generations to come and offers directions to imagine and build de-capitalised and de-urbanised cities to promote environmental sustainability. Written in lucid style, the chapters in the book illustrate the current situation of capitalist urbanization and expose how it exploits and consumes the planet. It also looks at alternative habitat practices of building autonomous and ecological human settlements, and how these can lead to a transformation of capitalist urbanization. The book also includes current debates on COVID-19 pandemic to consider post-pandemic challenges in envisioning a de-capitalised, eco-friendly society in the immediate future. It will be useful for academics and professionals in the fields of sociology, urban planning and design and urban studies.

Conflict avoidance and resolution have always been primary purposes of the law.

Satisfaction with judicial processes has declined in many jurisdictions. After the diversion of many disputes from courts to arbitral tribunals, arbitration has now also become a target of intense criticism. This dissatisfaction with binding third party adjudication of disputes coincides with rising tensions among citizens asking basic questions about what they can expect from each other and their governments in a constantly changing world. One response has been the proliferation of processes between disputing parties that are structured and interactive negotiation and assisted by a neutral third party using specialized negotiation and communication techniques. These processes have been labelled “mediation”. While mediation is not focused on the identification and application of legal rights and duties in the way that adjudication is, its success remains dependent on a legal framework which is still evolving in most jurisdictions and especially across borders. In this edition of the Comparative Law Yearbook of International Business, lawyers from nine jurisdictions examine developments relating not only to the framework for cross-border mediation, such as the Singapore Convention or inter-State disputes, or relating to their countries’ overall approaches to regulating this method of dispute resolution, but also relating to specific issues, such as mediator ethics and conflicts of interest, and even exploring the neural science of conflict dynamics.

Waging Gendered Wars examines, through the analytical lens of feminist international relations theory, how U.S. military women have impacted and been affected by the

wars in Iraq and Afghanistan. Although women were barred from serving formally in ground combat positions within the U.S. armed forces during both wars, U.S. female soldiers are being killed in action. By examining how U.S. military women's agency as soldiers, veterans, and casualties of war affect the planning and execution of war, Whaley Eager assesses the ways in which the global world of international politics and warfare has become localized in the life and death narratives of female service personnel impacted by combat experience, homelessness, military sexual trauma, PTSD, and the deaths of fellow soldiers.

The Integrated Water Resources Management (IWRM) paradigm has been worldwide recognized as the only feasible way currently available to ensure a sustainable perspective in planning and managing water resource systems. It is the inspiring principle of the Water Framework Directive, adopted by the European Union in 2000, as well as the main reference for all the water related activity of UNESCO in the third world countries. However, very often, real world attempts of implementing IWRM fail for the lack of a systematic approach and the inadequacy of tools and techniques adopted to address the intrinsically complex nature of water systems. This book explores recent and important contributions of System Analysis and Control Theory to the technical application of such paradigm and to the improvement of its theoretical basis. Its prior aim is to demonstrate how the modelling and computational difficulties posed by this paradigm might be significantly reduced by strengthening the efficiency of the solution

techniques, instead of weakening the integration requirements. The first introductory chapter provides the reader with a logical map of the book, by formalizing the IWRM paradigm in a nine-step decisional procedure and by identifying the points where the contribution of System Analysis and Control Theory is more useful. The book is then organized in three sections whose chapters analyze some theoretical and mathematical aspects of these contributions or presents design applications. The outstanding research issues on the border between System Analysis and IWRM is depicted in the last chapter, where a pull of scientists and experts, coordinated by Prof. Tony Jakeman describe the foreseeable scenario. The book is based on the most outstanding contributions to the IFAC workshop on Modelling and Control for Participatory Planning and Managing Water Systems held in Venice, September 28- October 1, 2004. That workshop has been conceived and organized with the explicit purpose of producing this book: the maximum length of the papers was unusually long (of the size of a book chapter) and only five long oral presentations were planned each day, thus allowing for a very useful and constructive discussion. The goal of this handbook is to enhance the practice of mediation by showing how lessons from individual mediators can be identified and made available both to their home organization (e.g., a foreign ministry, intergovernmental organization, or

Read Book Conflict Analysis Tools Eth Z Rich

nongovernmental organization) and to a wider practitioner audience. More particularly, the handbook gives guidance to staff debriefing mediators who are or have been directly involved in peace negotiations. The focus here is not on self-assessments by the mediators themselves, nor on evaluations of the mediator's performance by external donors, nor on political or psychological debriefing. Instead, this handbook examines methodological debriefing: that is, interviews conducted with the goal of learning lessons about the mediation method from the experience of a specific mediator that are useful for future mediation processes. Methodological debriefing is typically conducted by individuals who have not been directly involved in the mediator's work and who do not seek to judge it but who want to learn the mediator's perspective on what was done and why it was done. Ideally, the mediator will also benefit from the interview by discovering something new through the questions posed, by having the opportunity to recount a challenging experience, or at least by having her or his experiences documented in a structured and objective manner.

The rapid evolution of technology continuously changes the way people interact, work, and learn. By examining these advances from a sociological perspective, researchers can further understand the impact of cyberspace on human behavior, interaction, and cognition. *Multigenerational Online Behavior and Media Use: Concepts, Methodologies, Tools, and Applications* is a vital reference source covering the impact of social networking platforms on a variety of relationships, including those between individuals,

This textbook examines a wide range of humanitarian action issues in five parts, presented by specialists from different academic fields. The respective parts reflect the five core modules of the International NOHA Joint Master's Programme "International Humanitarian Action": a) World Politics, b) International Law, c) Public Health, d) Anthropology, and e) Management. The book serves as a common basis for teaching at all NOHA universities and aims at imparting the basic knowledge and skills needed to excel in a complex interdisciplinary and international learning context. It provides in-depth information on key international humanitarian principles and values, professional codes of conduct, and the commitment to their implementation in practice. The book will thus be useful for all students of the NOHA Joint Master's Programme and participants of any courses with a similar content, but also for academics and practitioners affiliated

with entities such as international organisations and NGOs. It may also serve as an introduction to anyone with an interest in understanding the numerous and inter-linked facets of humanitarian action.

The topic of workplace bullying and abuse gained considerable public and media attention during 2013 when the scandal of events at the BBC was unveiled following an enquiry led by Dinah Rose QC. The Handbook of Dealing with Workplace Bullying, edited by Dr Anne-Marie Quigg, presents the collective wisdom and knowledge of a number of lawyers, management experts and academics from around the world. The key themes include understanding the law in each country represented and the responsibilities of individuals as well as management teams and governors in organizations. New case studies are supplied by people working with and within HR teams who have professional experience of dealing with the issue, as well as practical suggestions that are of use to managers, to people accused of bullying and also to people who find they are targets of bullying. Dr Quigg summarizes the range and scope of the contributions by the individual contributors, commenting on the research findings and professional experience that informs them. The book thus reflects the variety of options for dealing with bullying that are relevant in different parts of the world, and focuses on advice that is pertinent in real life, rather than presenting a collection of academic theories.

Peace and Conflict is a biennial publication that provides cutting-edge data and analysis concerning domestic and international conflicts and corresponding peacebuilding activities. The book include forecasts of risks of political and social instability, as well as trends and patterns in conflict. The 2014 edition focusses on the 'micro level' in the study of conflict and peacebuilding, such as social relationships below the level of the nation-state, with attention to key topics such as ethnicity, climate change, foreign aid and sexual violence. Peace and Conflict is a large-format, full-color resource with numerous graphs, tables, maps, and appendices dedicated to the visual and summary presentation of information. Crisp narratives are highlighted with pull-quote extracts emphasizing major findings.

This source book is for people working in areas affected by conflict and violence. Easy to use and developed over a number of years by the organization./ Responding to Conflict (RTC), in collaboration with practitioners from around the world, this book provides down to earth techniques for conflict analysis. Examples are drawn from around the world—including Cambodia, Afghanistan,

This open access book brings together a set of original studies that use cutting-edge computational methods to investigate conflict at various geographic scales and degrees of intensity and violence. Methodologically, this book covers a variety of computational approaches from text mining and machine learning to agent-based modelling and social network analysis. Empirical cases range from migration policy framing in North America and street protests in Iran to violence against civilians in Congo and food riots world-wide. Supplementary materials in the book include a comprehensive list of the datasets on conflict and dissent, as well as resources to online repositories where the annotated code and data of individual chapters can be found and where (agent-based) models can be reproduced and altered. These materials are a valuable resource for those wishing to retrace and learn from the analyses described in this volume and adapt and apply them to their own research interests. By bringing together novel research through an international team of scholars from a range of disciplines, Computational Conflict Research pioneers and maps this emerging field. The book will appeal to students, scholars, and anyone interested in the prospects of using computational social sciences to advance our understanding of conflict dynamics.

HANDBOOK OF CATCHMENT MANAGEMENT In 2010, the first edition of the Handbook of Catchment Management provided a benchmark on how our understanding and actions in water management within a catchment context had evolved in recent decades. Over ten years on, the catchment management concept is entering a new phase of development aligned to contemporary and future challenges. These include climate change uncertainty, further understanding in ecological functioning under change, the drive for a low-carbon, energy efficient and circular society, multiple uses of water, the emergence of

new pollutants of concern, new approaches to valuation, finance and pricing mechanisms, stewardship and community engagement, the integration of water across the Sustainable Development Goals (SDG) and the link between water, energy and food. These developments are framed within an increasingly data rich world where new analytics, sensor technology and processing power are informing increasingly real-time decision making. The challenge is also to increase cross-compliance and policy integration to meet multiple stakeholder objectives, and to link actions to achieve cost-effective outcomes. In addition, there are a number of new and exciting city, region and basin-scale real-world examples of contemporary and new catchment thinking; integrating science, technology, knowledge and governance to address multiple drivers and complex problems from across the globe. The time is now right, to capture the new challenges facing catchment management and water resources management globally. This revised and updated edition of the Handbook of Catchment Management features: Thoroughly rewritten chapters which provide an up-to-date view of catchment management issues and contexts New case study material highlighting multi-sectoral management in different globally significant basins and different geographical locations Up-to-date topics selected for their resonance not only in natural sciences and engineering, but also in other fields,

such as socio-economics, law and policy The Handbook is designed for a broad audience, but will be particularly useful for advanced students, researchers, academics and water sector professionals such as planners, consultants and regulators.

The purpose of this study is to investigate the extent to which MBA graduates perceived their MBA education experience to have contributed towards the development of global leadership competencies in their lives. The collected data related to what the respondents perceived to have observed vis-à-vis what they would have considered adequate for the development of global leadership competencies. Stratified sampling technique was used to select the respondents using disproportionate allocation of respondents within strata. Data relating to the key research objectives were analyzed using nonparametric tests specifically the Chi-square goodness of fit test and Wilcoxon signed ranks test.

The interest of physicists in economic and social questions is not new: for over four decades, we have witnessed the emergence of what is called nowadays “sociophysics” and “econophysics”, vigorous and challenging areas within the wider “Interdisciplinary Physics”. With tools borrowed from Statistical Physics and Complexity, this new area of study have already made important contributions, which in turn have fostered the development of novel theoretical foundations in Social Science

and Economics, via mathematical approaches, agent-based modelling and numerical simulations. From these foundations, Computational Social Science has grown to incorporate as well the empirical component --aided by the recent data deluge from the Web 2.0 and 3.0--, closing in this way the experiment-theory cycle in the best tradition of Physics.

Adopting an interdisciplinary perspective, *Freedom from Fear, Freedom from Want* is a brief introduction to human security, conflict, and development. The book analyzes such key human security issues as climate change, crimes against humanity, humanitarian intervention, international law, poverty, terrorism, and transnational crime, among others. The authors encourage readers to critically assess emerging threats while evaluating potential mechanisms of deterrence such as conflict resolution, economic development, diplomacy, peacekeeping, international law, and restorative justice. Concise yet comprehensive, *Freedom from Fear, Freedom from Want* is an ideal text for human security courses.

This book describes the essential components of the SCION secure Internet architecture, the first architecture designed foremost for strong security and high availability. Among its core features, SCION also provides route control, explicit trust information, multipath communication, scalable quality-of-service guarantees, and efficient forwarding. The book includes functional specifications of the network elements, communication protocols among these elements, data structures, and

configuration files. In particular, the book offers a specification of a working prototype. The authors provide a comprehensive description of the main design features for achieving a secure Internet architecture. They facilitate the reader throughout, structuring the book so that the technical detail gradually increases, and supporting the text with a glossary, an index, a list of abbreviations, answers to frequently asked questions, and special highlighting for examples and for sections that explain important research, engineering, and deployment features. The book is suitable for researchers, practitioners, and graduate students who are interested in network security.

This book constitutes the refereed proceedings of the Third International Conference on Cooperative Design, Visualization, and Engineering, CDVE 2006, held in Mallorca, Spain in September 2006. The papers cover all current issues in cooperative design, visualization, and engineering, ranging from theoretical and methodological topics to various systems and frameworks to applications in a variety of fields.

Collaborations responds to the growing pressure on the humanities and social sciences to justify their impact and utility after cuts in public spending, and the introduction of neoliberal values into academia. Arguing 'in defense of' anthropology, the editors demonstrate the continued importance of the discipline and reveal how it contributes towards solving major problems in contemporary society. They also illustrate how

Read Book Conflict Analysis Tools Eth Z Rich

anthropology can not only survive but thrive under these conditions. Moreover, Collaborations shows that collaboration with other disciplines is the key to anthropology's long-term sustainability and survival, and explores the challenges that interdisciplinary work presents. The book is divided into two parts: Anthropology and Academia, and Anthropology in Practice. The first part features examples from anthropologists working in academic settings which range from the life, behavioural and social sciences to the humanities, arts and business. The second part highlights detailed ethnographic contributions on topics such as peace negotiations, asylum seekers, prostitution and autism. Collaborations is an important read for students, scholars and professional and applied anthropologists as it explores how anthropology can remain relevant in the contemporary world and how to prevent it from becoming an increasingly isolated and marginalized discipline.

When the guns are silenced, those who have survived armed conflict need food, water, shelter, the means to earn a living, and the promise of safety and a return to civil order. Meeting these needs while sustaining peace requires more than simply having governmental structures in place; it requires good governance. Natural resources are essential to sustaining people and peace in post-conflict countries, but governance failures often jeopardize such efforts. This book examines the theory, practice, and often surprising realities of post-conflict governance, natural resource management, and peacebuilding in fifty conflict-affected countries and territories. It includes thirty-nine

Read Book Conflict Analysis Tools Eth Z Rich

chapters written by more than seventy researchers, diplomats, military personnel, and practitioners from governmental, intergovernmental, and nongovernmental organizations. The book highlights the mutually reinforcing relationship between natural resource management and good governance. Natural resource management is crucial to rebuilding governance and the rule of law, combating corruption, improving transparency and accountability, engaging disenfranchised populations, and building confidence after conflict. At the same time, good governance is essential for ensuring that natural resource management can meet immediate needs for post-conflict stability and development, while simultaneously laying the foundation for a sustainable peace. Drawing on analyses of the close relationship between governance and natural resource management, the book explores lessons from past conflicts and ongoing reconstruction efforts; illustrates how those lessons may be applied to the formulation and implementation of more effective governance initiatives; and presents an emerging theoretical and practical framework for policy makers, researchers, practitioners, and students. Governance, Natural Resources, and Post-Conflict Peacebuilding is part of a global initiative to identify and analyze lessons in post-conflict peacebuilding and natural resource management. The project has generated six books of case studies and analyses, with contributions from practitioners, policy makers, and researchers. Other books in this series address high-value resources, land, water, livelihoods, and assessing and restoring natural resources.

Since the waves of financial liberalization in the 1980s, emerging market economies have been accessible to foreign investors. Altogether, they contributed up to 43.8% of the global GDP in 2018, and many of them, such as China, India, Bangladesh, Philippines, Myanmar and Vietnam from 2010 to 2019, are among the fastest-growing economies in the world. Given the high economic growth, the assets issued by companies in emerging markets are viewed as a new set of investment opportunities for global investors and fund managers who seek to improve the risk-adjusted performance of their portfolios. In addition to their risky profile due to the lack of transparency as well as stable and matured institutions, their recent development path faces a number of challenges arising not only from the slow pace of economic reforms but also from their increased integration with the world. Geopolitical risks, the US–China trade wars, and rising policy uncertainty around the world are expected to reduce their growth potential and performance. This Special Issue dedicates special attention to the current dynamics of emerging financial markets, as well as their perspectives of development as a key driver for sustainable firms and economies. Accordingly, the focus is particularly placed on market integration and interdependence, valuations and risk management practices, and the financing means for inclusive growth.

Sociological theories of crime include: theories of strain blame crime on personal stressors; theories of social learning blame crime on its social rewards, and see crime more as an institution in conflict with other institutions rather than as individual

Read Book Conflict Analysis Tools Eth Z Rich

deviance; and theories of control look at crime as natural and rewarding, and explore the formation of institutions that control crime. Theorists of corruption generally agree that corruption is an expression of the Patron–Client relationship in which a person with access to resources trades resources with kin and members of the community in exchange for loyalty. Some approaches to modeling crime and corruption do not involve an explicit simulation: rule based systems; Bayesian networks; game theoretic approaches, often based on rational choice theory; and Neoclassical Econometrics, a rational choice-based approach. Simulation-based approaches take into account greater complexities of interacting parts of social phenomena. These include fuzzy cognitive maps and fuzzy rule sets that may incorporate feedback; and agent-based simulation, which can go a step farther by computing new social structures not previously identified in theory. The latter include cognitive agent models, in which agents learn how to perceive their environment and act upon the perceptions of their individual experiences; and reactive agent simulation, which, while less capable than cognitive-agent simulation, is adequate for testing a policy's effects with existing societal structures. For example, NNL is a cognitive agent model based on the REPAST Symphony toolkit.

The media generally tend to focus in particular on the failures of U.N. peacekeeping operations. In *Walking the Tightrope*, Jair Van Der Lijn draws a different conclusion. He argues once a peace agreement has been signed, the efforts of the U.N. peacekeeping operations do contribute to durable peace. By analyzing the U.N. peacekeeping operations in Cambodia, Mozambique, Rwanda, and El Salvador in a structured focused comparison, this book shows how U.N. operations do have a contribution to make.

Ending Holy Wars explores how religious dimensions affect the possibilities for conflict resolution in civil war. This is the first book that systematically tries to map out the religious dimensions of internal armed conflicts and explain the conditions under which religious dimensions impede peaceful settlement. It draws upon empirical work on global data, based on the Uppsala Conflict Data Program (UCDP), and complements this quantitative data with several smaller case studies (Sri Lanka, Philippines and Indonesia). The book shows how religious identities and incompatibilities influence the likelihood of agreements and the mechanisms through which parties and third-party

mediators have been able to overcome religious obstacles to negotiated settlements. These findings pave the way for a discussion on how conflict theory can better incorporate religious dimensions, as well as how policy can be designed to manage religious dimensions in armed conflicts.
