As the construction industry continues to develop within the natural environment, the industry has to take strong measures to ensure that its activities are in harmony with the environment. The challenge for the construction sector is not just to respond to the need for adequate housing and rapid urbanisation, but to do it in a way that is socially and ecologically responsible. This book begins with the current progress of the construction industry in Malaysia before shifting to the fragile relationship between construction and environment. Knowing the rapid development in Malaysia and how construction can affect the environment, this book delves into some evidence of environmental degradation in Malaysia. In the mist of degradation, there is some light shone by the government agencies, state government and some construction players who have initiated several actions to improve present situation. Construction players must be ready to address these concerns, aware of the requirements and comply with it, while the government must be ready to implement and enforce the requirement. An effective planning, implementation and monitoring is vital if the environment is to be part of the culture of the construction industry everywhere.

It is impossible to trisect angles with straightedge and compass alone, but many people try and think they have succeeded. This book is about angle trisections and the people who attempt them. Its purposes are to collect many trisections in one place, inform about trisectors, to amuse the reader, and, perhaps most importantly, to reduce the number of trisectors. This

book includes detailed information about the personalities of trisectors and their constructions. It can be read by anyone who has taken a high school geometry course.

The Monte Carlo Method: The Method of Statistical Trials is a systematic account of the fundamental concepts and techniques of the Monte Carlo method, together with its range of applications. Some of these applications include the computation of definite integrals, neutron physics, and in the investigation of servicing processes. This volume is comprised of seven chapters and begins with an overview of the basic features of the Monte Carlo method and typical examples of its application to simple problems in computational mathematics. The next chapter examines the computation of multi-dimensional integrals using the Monte Carlo method. Some examples of statistical modeling of integrals are analyzed, together with the accuracy of the computations. Subsequent chapters focus on the applications of the Monte Carlo method in neutron physics; in the investigation of servicing processes; in communication theory; and in the generation of uniformly distributed random numbers on electronic computers. Methods for organizing statistical experiments on universal digital computers are discussed. This book is designed for a wide circle of readers, ranging from those who are interested in the fundamental applications of the Monte Carlo method, to those who are concerned with comparatively limited problems of the peculiarities of simulating physical processes.

a quiet, secluded and serene environment. Owning such a home offers total privacy and a therapeutic experience that can't be found elsewhere. Regardless of whether it is the primary or secondary residence, it offers the perfect getaway during weekends and holidays. A simple and comfortable wooden house is what you need in order to have a feeling of serenity and privacy. If you want to bond with your spouse, children or friends, there is no better way to do it than spend sometime with them around a simple wooden house in a secluded environment. On top of bonding with family and friends, a wooden house provides the perfect resting place after a successful hunting trip. Wooden houses can be built anywhere on earth regardless of the natural phenomena experienced there. For instance, you can build the house in areas prone to earthquakes and rest assured that nobody will be severely injured or die in case of an earthquake. Even if the house is brought to the ground by an earthquake, there is minimal probability of anybody being injured with wooden walls and roof. Repairing wooden houses is also quite cheap when compared to repair of houses built with concrete, blocks, bricks or any other construction material. This means that you'll end up saving money by simply deciding to build a wooden house. It is also quite easy to alter the design of a wooden house than houses built using other materials. If you want special features in a home, all you need to do is make sure that you own a wooden house and then install all the features you want. With the book "How to Build a Simple Wooden House," you'll have everything required to construct a wooden house anywhere in the

No matter how much money you earn, it's always going to feel like it's never enough. Why? Because you're not the one who is in control of your finances. That's what happens when we live a life without a budget. There's no guidance, no framework, no reliable source to turn to which ensures we're doing what we should be doing with our money. Most people who get tired of living from paycheck to paycheck genuinely believe that making more money is the answer. If I make more money, I'll be happier. If I make more money, I'll be able to afford so much more. If I make more money, I won't have to keep stressing about not having enough left over each month. Oh, but how mistaken and wrong they all are. Making more money is not the answer, and it will never be the answer. It's not about how much money you earn. It's about what you are doing to control the income that you make. No matter how large your salary, spending more than you can afford, will always result in those dreaded feelings of it just never being 'enough'. This is exactly why you need a budget. Say the word 'budget,' and many will cringe or turn away in horror. It's almost taboo... a dirty word, a word associated with so much negativity that some people don't want anything to do with it. It's a word that conjures feelings of restriction, unhappiness, and an empty life of constant cutting back and sacrificing. In other words, budgets mean misery. Or do they? What if you knew that the secret to financial freedom all came down to simply having a budget? What if you knew that a concrete budget was the only way to get you out of debt and to stay out of debt for the rest of your life? What if you knew that a

Dr. MORI, Hiroshi is a popular novelist and also known as a modeler. After studying theories and repeating the experiments, he got a sense of achievement from his gyro monorail (Prototype No. 9). Then, he has decided to rebuild Prototype No. 7, as a smaller model than No. 9. He used no special parts, stuck to simple craft procedures, and kept the size of the car manageable. More than anything, the car conforms to the

design that is so reminiscent of railroad trains. Dr. MORI discloses the parts list and drawings, and then takes great care in explaining them in detail with significant points, so that many people can learn from them and build the gyro monorails of their own. This eBook passionately features the practical guideline for building gyro monorails. "Theories and Experiments for Gyro Monorails" is also available. (This work first appeared on 2010 August issue of a Japanese monthly magazine "Hobby of Model Railroading" by Kigei Publishing.)
