

Construction Management And Contracting

This book, about international contracting and contract management, is written from the angle of the contractor and discussed from an international perspective. It comments on real-life cases, taken from various kinds of projects: infrastructural works (roads, bridges, tunnels, rail roads), wind- and sunfarms, oil and gas installations, such as platforms, pipe lines, power generating works, and large buildings. The book is structured around the contracting cycle. Chapters include dealing with the role of the contractor in international contracting, the tender process, landing and negotiating the contract, types of contract, problems that may occur during project execution, project delivery, and handling guarantee claims. Written primarily for business practitioners operating in the international contracting industry, the title assumes that the reader will have a basic understanding and knowledge of theories related to project management, construction engineering, business law and economics. Though not an academic book, due to its unique blend of practitioners' insight and academic theory, it can be taught in courses at institutes at the master level. As most engineers are going to deal with contracts, this book is specifically recommended for engineering programs both at the graduate and postgraduate level. Lawyers will find the book useful to understand the business context in which their customers and/or colleagues work.

This authoritative text provides a detailed insight into how construction companies manage their finances at both corporate and project level. It will guide students and practitioners through the complexities of the financial reporting of construction projects within the constraints of accepted accounting practice. The book is written for non-accountants and from a contractor's perspective and is equally relevant to subcontractors and main contractors. The authors examine the relationship between the external annual accounts and the internal cost-value reconciliation process. CVR is covered in depth and the authors consider issues such as interim payments, subcontract accounts, contractual claims, final accounts, cash flow management and the reporting of the physical and financial progress of contracts. A broad perspective of all the financial aspects of contracting is taken along with related legal issues and the authors explain how things operate in the 'real world'. They describe good practice in financial control while at the same time being honest about some of the more questionable practices that can - and do - happen. The approach taken is unique as the financial management of construction projects is considered from the perspective of the contractor's quantity surveyor. The book deals with the real issues that surveyors have to address when using their judgment to report turnover, profitability, cash flow, and work in progress on projects and the financial problems faced by subcontractors are frankly and pragmatically explored. The payment and notice requirements of the Construction Act are explained in detail and relevant provisions of JCT2011, NEC3, ICC, DOM/1 and other standard contracts and subcontracts are also covered. Financial Management in Construction Contracting addresses the wide variety of external factors that influence how construction companies operate, including government policy, banking covenants and the financial aspects of supply chain management. Cost reporting systems are described and real-life examples are used to illustrate cost reports, accrual systems and how computerised systems can be employed to provide the QS with information that can be audited. Examples drawn from practice demonstrate how work-in-progress (WIP) is reported in contracting. Cost value reconciliation reports are featured and the book demonstrates how adjustments are made for overmeasure, undermeasure, subcontract liabilities and WIP as well as explaining the processes that contractors use when analysing external valuations. This is the ideal core text for final year degree and post-graduate level modules on Quantity Surveying, Commercial Management, Construction Management and Project Management courses and will provide an invaluable source of reference for quantity surveyors and others who may be engaged in the financial management of construction projects. The book's companion website at <http://www.wiley.com/go/xxxx> www.wiley.com/go/rossfinancialmanagement/a offers invaluable resources for

students and lecturers as well as for practising construction managers: end-of-chapter exercises + outline answers PowerPoint slides for each chapter ideas for discussion topics links to useful websites

This text is intended for introductory courses on construction management, as well as more advanced, detailed courses on the subject. The authors aim to balance theoretical material with practical advice.

"Most construction contractors start small with ambitious plans for growth - but half will fail before they are five years old. The most skilled project managers and craftsmen still need the knowledge and experience in running a business to succeed. This book offers the opportunity to stack the odds in your favour. It is based on the things I've learned, used, and refined as a commercial contractor while starting up and operating my own construction firm for 25 years. My book spreads these tools out on the table and the reasoning behind them, makes suggestions for their use, and offers a proven business philosophy--knowledge a contractor can set in place from day one to put his construction business on a level playing field with the best-run companies. What's written here is born of missteps as well as best steps, and both are instructive in building a business that is profitable, enjoyable, and enduring. I've put in one place as much as possible of what I learned the hard way so that you can profit from my experience." * Learn what you need to succeed in the construction sector * How to target, land and retain profitable customers * Avoid the pitfalls of running your own construction business

Risk, and the headaches that go with it, have always been a major part of any construction project -- risk of loss, negative cash flow, construction claims, regulations, excessive changes, disputes, slow pay -- sometimes you'll make money, and often you won't. But many contractors today are avoiding almost all of that risk by working under a construction management contract, where they are simply a paid consultant to the owner, running the job, but leaving him the risk. This manual is the how-to of construction management contracting. You'll learn how the process works, how to get started as a CM contractor, what the job entails, how to deal with the issues that come up, when to step back, and how to get the job completed on time and on budget. Includes a link to free downloads of CM contracts legal in each state.

The management of construction projects is a wide ranging and challenging discipline in an increasingly international industry, facing continual challenges and demands for improvements in safety, in quality and cost control, and in the avoidance of contractual disputes. Construction Management grew out of a Leonardo da Vinci project to develop a series of Common Learning Outcomes for European Managers in Construction. Financed by the European Union, the project aimed to develop a library of basic materials for developing construction management skills for use in a pan-European context. Focused exclusively on the management of the construction phase of a building project from the contractor's point of view, Construction Management covers the complete range of topics of which mastery is required by the construction management professional for the effective delivery of new construction projects. With the continued internationalisation of the construction industry, Construction Management will be required reading for undergraduate and postgraduate students across Europe.

This very practical guide describes the whole process of contracting for goods and services, from selecting tenderers to placing a contract. It details the key topics that are necessary for success, such as contract strategy, contract types, contract law and evaluating tenders. Whilst the book also addresses the project context in which purchasing takes place, the subject matter could equally be applied to any business context. The treatment of the subject assumes no prior knowledge but, at the same time, provides the experienced person with new, and sometimes unconventional, insights into the subject. The book includes personal experiences, cases and exercises in order to root the subject into the real world. The Project Manager's Guide to Purchasing has been structured so that the reader can choose the chapter topic areas that they wish to study in isolation. Where necessary references are provided to complement the individual chapters. Illustrations of key documents in the purchasing and contracting process are also provided.

Washington River Protection Solutions, LLC (WRPS) has faced significant project management challenges in managing Davis-Bacon construction work that meets contractually required small business goals. The unique challenge is to provide contracting opportunities to multiple small business construction subcontractors while performing high hazard work in a safe and productive manner. Previous to the WRPS contract, construction work at the Hanford Tank Farms was contracted to large companies, while current Department of Energy (DOE) Contracts typically emphasize small business awards. As an integral part of Nuclear Project Management at Hanford Tank Farms, construction involves removal of old equipment and structures and installation of new infrastructure to support waste retrieval and waste feed delivery to the Waste Treatment Plant. Utilizing the optimum construction approach ensures that the contractors responsible for this work are successful in meeting safety, quality, cost and

schedule objectives while working in a very hazardous environment. This paper describes the successful transition from a traditional project delivery method that utilized a large business general contractor and subcontractors to a new project construction management model that is more oriented to small businesses.

Construction has selected the Agency Construction Management Method (John E Schaufelberger, Len Holm, "Management of Construction Projects, A Constructor's Perspective", University of Washington, Prentice Hall 2002). This method was implemented in the first quarter of Fiscal Year 2009 (FY2009), where Construction Management is performed by substantially home office resources from the URS Northwest Office in Richland, Washington. The Agency Method has allowed WRPS to provide proven Construction Managers and Field Leads to mentor and direct small business contractors, thus providing expertise and assurance of a successful project. Construction execution contracts are subcontracted directly by WRPS to small or disadvantaged contractors that are mentored and supported by URS personnel. Each small contractor is mentored and supported utilizing the principles of the Construction Industry Institute (CII) Partnering process. Some of the key mentoring and partnering areas that are explored in this paper are, internal and external safety professional support, subcontractor safety teams and the interface with project and site safety teams, quality assurance program support to facilitate compliance with NQA-1, construction, team roles and responsibilities, work definition for successful fixed price contracts, scheduling and interface with project schedules and cost projection/accruals. The practical application of the CII Partnering principles, with the Construction Management expertise of URS, has led to a highly successful construction model that also meets small business contracting goals.

In this study, the particular importance of optimising the so-called "soft power" of organisations, is addressed. Things like organisational culture, responsible corporate behaviour, and building trust-based relationships with other stake-holders are seen as facets of a broader organisational capability, and the advantages of this strength are also explored. The internationally conducted research behind this book will provide readers with new insights into effective management, from both inter and intra organisational perspectives. This unique and important book is essential reading for researchers and advanced students of construction management.
