Planning is becoming one of the key battlegrounds for Indigenous people to negotiate meaningful articulation of their sovereign territorial and political rights, reigniting the essential tension that lies at the heart of Indigenous-settler relations. But what actually happens in the planning contact zone - when Indigenous demands for recognition of coexisting political authority over territory intersect with environmental and urban land-use planning systems in settler-colonial states? This book answers that question through a critical examination of planning contact zones in two settler-colonial states: Victoria, Australia and British Columbia, Canada. Comparing the experiences of four Indigenous communities who are challenging and renegotiating land-use planning in these places, the book breaks new ground in our understanding of contemporary Indigenous land justice politics. It is the first study to grapple with what it means for planning to engage with Indigenous peoples in major cities, and the first of its kind to compare the underlying conditions that produce very different outcomes in urban and non-urban planning contexts. In doing so, the book exposes the costs and limits of the

liberal mode of recognition as it comes to be articulated through planning, challenging the received wisdom that participation and consultation can solve conflicts of sovereignty. This book lays the theoretical, methodological and practical groundwork for imagining what planning for coexistence might look like: a relational, decolonizing planning praxis where self-determining Indigenous peoples invite settler-colonial states to their planning table on their terms. Combines a rigorous treatment of the theory of investment and finance with practical applications within the context of the UK financial system.

Brealey, Principles of Corporate Finance 13e describes the theory and practice of corporate finance. We hardly need to explain why financial managers must master the practical aspects of their job, but we should spell out why down-to-earth managers need to bother with theory. Throughout this edition, the authors demonstrate how managers use financial theory to solve practical problems. They also explore what financial managers should do to increase company value. Some of the biggest changes in this edition were prompted by the tax changes enacted in the U.S. Tax Cuts and Jobs Act passed in December 2017.

Shadows of Power examines public policy and in particular, the communicative processes of policy and decision-making. It explore the important who, how and why issues of policy decisions. Who really takes the decisions? How are they arrived at and why were such processes used? What relations of power may be revealed between the various participants? Using stories from planning practices, this book shows that local planning decisions, particularly those which involve consideration of issues of 'public space' cannot be understood separately from the socially constructed, subjective territorial identities, meanings and values of the local people and the planners concerned. Nor can it be fully represented as a linear planning process concentrating on traditional planning policy-making and decision-making ideas of survey analysis-plan or officer recommendation-council decision-implementation. Such notions assume that policy-and decision-making proceed in a relatively technocratic and value neutral, unidirectional, step-wise process towards a finite end point. In this book Jean Hillier explores ways in which different values and mind-sets may affect planning outcomes and relate to systemic power structures. By unpacking these and bring them together as influences on participants' communication, she reveals influences at work in decision-making processes that were previously invisible. If planning theory is to be of real use to practitioners, it needs to address practice as it is actually encountered in the worlds of planning officers and elected representatives. Hillier shed light on the shadows so that practitioners may be better able to understand the circumstances in which they find themselves and act more effectively in what is in reality a messy, highly politicised decision-making process.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of

inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

The book describes the difficulties of the current international corporate income tax system. It starts by describing its origins and how changes, such as the development of multinational enterprises and digitalization have created fundamental problems, not foreseen at its inception. These include tax competition—as governments try to attract tax bases through low tax rates or incentives, and profit shifting, as companies avoid tax by reporting profits in jurisdictions with lower tax rates. The book then discusses solutions, including both evolutionary changes to the current system and fundamental reform options. It covers both reform efforts already under way, for example under the Inclusive Framework at the OECD, and potential radical reform ideas developed by academics.

Introduction to Management Science, 2e offers a unique case study approach and integrates the use of Excel. Each chapter includes a case study that is meant to show the students a real and interesting application of the topics addressed in that chapter. This most recent revision has been thoroughly updated to be more "user-friendly" and more technologically advanced. These changes include, a completely new chapter on the art of modeling with spreadsheets. This unique chapter goes far beyond anything found in other textbooks and are based on the award winning methodologies used by Mark Hillier in his own course. The technology package has also been greatly enhanced to include, Crystal Ball 2000 (Professional Edition) a Management Science Online Learning Center, and an Excel add-in called Solver Table for performing sensitivity analysis. Crystal Ball is the most popular Excel add-in for computer simulation and includes OptQuest (an optimizer with simulation) as well as a forecasting module. The Management Science Online Learning Center (website) includes several modules that enable students to interactively explore certain management science techniques in depth. Solver Table is an Excel add-in developed by the author to help perform sensitivity analysis systematically, as well as substantially expanded coverage of computer simulation, including Crystal Ball. We now have two chapters on computer simulation instead of one, where the second chapter features the use of

Crystal Ball.all.

This textbook aims to fill the gap between those that offer a theoretical treatment without many applications and those that present and apply formulas without appropriately deriving them. The balance achieved will give readers a fundamental understanding of key financial ideas and tools that form the basis for building realistic models, including those that may become proprietary. Numerous carefully chosen examples and exercises reinforce the student's conceptual understanding and facility with applications. The exercises are divided into conceptual, application-based, and theoretical problems, which probe the material deeper. The book is aimed toward advanced undergraduates and first-year graduate students who are new to finance or want a more rigorous treatment of the mathematical models used within. While no background in finance is assumed, prerequisite math courses include multivariable calculus, probability, and linear algebra. The authors introduce additional mathematical tools as needed. The entire textbook is appropriate for a single year-long course on introductory mathematical finance. The self-contained design of the text allows for instructor flexibility in topics courses and those focusing on financial derivatives. Moreover, the text is useful for mathematicians, physicists, and engineers who want to learn finance via an approach that builds their financial intuition and is explicit about model building, as well as business school students who want a treatment of finance that is deeper but not overly theoretical.

All over the world societies are facing a number of major problems. New developments, challenges and opportunities cause these issues and yet cases tell us that traditional spatial planning responses and tools are often insufficient to tackle these problems and challenges. Situated Practices of Strategic Planning draws together examples from across the globe – from France to Australia; from Nigeria to the United States, as it observes international comparisons of the strategic planning process. Many approaches and policies used today fail to capture the dynamics of urban/regional transformation and are more concerned with maintaining an existing social order than challenging and transforming it. Stewarded by a team of highly regarded and experienced researchers, this book gives a synthetic view of the process of change and frames future directions of development. It is unique for its combination of analysis of international case studies and reflection on critical nodes and features in strategic planning. This volume will be of interest to students who study regional planning, academics, professional planners, and policy makers.

This Fourth Edition introduces the latest theory and applications in optimization. It emphasizes constrained optimization, beginning with a substantial treatment of linear programming and then proceeding to convex analysis, network flows, integer programming, quadratic programming, and convex optimization. Readers will discover a host of practical business applications as well as non-business applications. Topics are clearly developed with many numerical examples worked out in detail. Specific examples and concrete algorithms precede more abstract topics. With its focus on solving practical problems, the book features free C programs to implement the major algorithms covered, including the two-phase simplex method, primal-dual simplex method, path-following interior-point method, and homogeneous self-dual methods. In addition, the author provides online JAVA applets that illustrate various pivot rules and variants of the simplex method, both for linear programming and for network flows. These C programs and JAVA tools can be found on the book's website. The website also includes new online instructional tools and exercises.

Originally published in 1994, this text analyses the key issues that influence the growth and development of small businesses. Looking at the concept in which they operate, the book outlines the factors that are dominant in the sector and explores the effects it has on the economy. Is the creation of small businesses the answer to unemployment? Has the lowering of interest rates or taxation encouraged the self-employed to work harder? Have banks given small business a raw deal? These are just some of the questions discussed as David Storey explains the issues of employment, finance and policy and the issues dictating failure or success.
