This book is an invitation to study managerial uses of accounting information. Three themes run throughout. First, the accounting system is profitably thought of as a library of financial statistics. Answers to a variety of questions are unlikely to be found in prefabricated format, but valuable information awaits those equipped to interrogate the library. Second, the information unlikely

to be the only information at the manager's disposal. So knowing how to combine accounting and nonaccounting bits of information is an important, indeed indispensable, managerial skill. Finally, the role of a professional manager is emphasized. This is an individual with skill, talent, and imagination, an individual who brings professional quality skills to the task of managing. This book also makes demands on the reader. It assumes the reader has had prior exposure to financial accounting, economics, statistics, and the economics of uncertainty (in the form of risk aversion and decision trees). A modest acquaintance with strategic, or equilibrium, modeling is also presumed, as is patience with abstract notation. The book does not make deep mathematical demands on the reader. An acquaintance with linear programming and the ability to take a simple derivative are presumed. The major prerequisite is a tolerance for (if not a predisposition toward) abstract notation. This style and list of prerequisites are not matters of taste or author imposition.
