Companies more and more compete as integrated supply chains rather than as individual firms. Success of the entire supply chain (SC) determines the economic well-being of the individual company. With management attention shifting to supply chains, the role of management accounting (MAC) naturally must extend to the cross-company layer as well. MAC can make a significant contribution to SC success, but is faced with a multitude of problems and challenges when trying to do so. Students both in supply chain management (SCM) or management accounting (MAC) respectively, are typically not familiarized with these issues. There is still a clear gap in higher education
