

Cr Industrial Seals Product Overview Brg

This multi-volume set is a primary source for basic company and industry information. Names, addresses, SIC code, and geographic location of over 135,000 U.S. companies are included.

From long-standing worries regarding the use of lead and asbestos to recent research into carcinogenic issues related to the use of plastics in construction, there is growing concern regarding the potential toxic effects of building materials on health. Toxicity of building materials provides an essential guide to this important problem and its solutions. Beginning with an overview of the material types and potential health hazards presented by building materials, the book goes on to consider key plastic materials. Materials responsible for formaldehyde and volatile organic compound emissions, as well as semi-volatile organic compounds, are then explored in depth, before a review of wood preservatives and mineral fibre-based building materials. Issues related to the use of radioactive materials and materials that release toxic fumes during burning are the focus of subsequent chapters, followed by discussion of the range of heavy metals, materials prone to mould growth, and antimicrobials. Finally, Toxicity of building materials concludes by considering the potential hazards posed by waste based/recycled building materials, and the toxicity of nanoparticles. With its distinguished editors and international team of expert contributors, Toxicity of building materials is an invaluable tool for all civil engineers, materials researchers, scientists and educators working in the field of building materials. Provides an essential guide to the potential toxic effects of building materials on health. Comprehensively examines materials responsible for formaldehyde and volatile organic compound emissions, as well as semi-volatile organic compounds. Later chapters focus on issues surrounding the use of radioactive materials and materials that release toxic fumes during burning.

Journalist and writer Paul Paradise gives an in-depth examination of what's been called the business crime wave of the 21st century--a trend that is already absorbing 5-7 percent of the world's commerce and billions of dollars from the U.S. economy. He explores the history of the problem, how counterfeiting and piracy are done, and how U.S. businesses are trying to battle it. With interviews, commentary, and anecdotes by corporate attorneys, business leaders, and private investigators, Paradise shows what is behind this appalling criminal industry, that ranges from t-shirts and watches to pharmaceuticals and airplane parts. This is an important, well-written study for anyone interested in world trade and the damage that violations of intellectual property laws can inflict.

Directory is indexed by name (parent and subsidiary), geographic location, Standard Industrial Classification (SIC) Code, and corporate responsibility.

The definitive guide to the international fluid sealing industry to help you make the right business decisions. • Will help you to keep track of the major issues affecting the market. • Will enable you to identify new business opportunities. • Includes Market forecasts, commentary and analysis supported by primary research. Completely revised and updated, the 3rd edition of Profile of the International Fluid Sealing Industry - Market Prospects to 2008 reviews the markets, technological trends and major manufacturers of fluid seals on a global basis. We have drawn on the expertise from our existing portfolio, Sealing Technology newsletter and World Pumps magazine to bring you vital information, analyses, forecasts that cannot be found anywhere else. The study deals with items and materials used, very largely, in the mechanical engineering sector, to effect hermetic closures or the separation of fluids. It therefore covers gaskets and packings, O-rings and mechanical and bellows seals. Profile of the International Fluid Sealing Industry covers the structure of the industry, highlighting developments, identifying future trends, and looking at recent mergers and acquisitions in the sector. Market estimates and forecasts to 2008, by region and seal type, are presented along with an analysis of the main end-user markets for fluid seals, as well as a technology overview. Forty leading international fluid sealing manufacturers are profiled. A directory of seal manufacturing companies is also included. For a PDF version of the report please call Steve Kimber on +44 (0) 1865 843666 for price details.

Ward's Automotive Yearbook Profile of the International Fluid Sealing Industry - Market Prospects to 2008 Elsevier

This report surveys the main types of seal, static and dynamic as well as those with more specific applications such as pneumatic and diaphragm seals. It then goes on to look at seal manufacture and the range of polymeric materials available for use in seal design from natural rubber and EPM to fluorosilicone rubbers and PTFE, providing data on their maximum and minimum usage temperatures. An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database provides useful references for further reading.

Vols. for 1891-1897 include decisions of the United States Board of General Appraisers.
