Microcredit services enable low income people to move their family away from poverty and towards higher living standards, by increasing their business activity, improving their employment opportunities, and contributing to sustainable economic growth and development. Investigating the Albanian market, by assessing the impact of Albanian microfinance programs at each of the four above-mentioned impact levels, this book explores whether being a client of MFIs microfinance programmes brings positive changes to their lives and their community. The majority of cases are accompanied by spreadsheet models to help students perform the required analyses. The casebook also contains seven qualitative mini-cases created to highlight the ethical dilemmas that occasionally arise in the practice of healthcare finance.

Important changes to this edition: All cases have been updated, and many have been revised extensively, including new exhibits, timely topics, and new calculations. Two new cases have been added to the book: One focuses on bond refunding and the other covers revenue cycle management. A new mini-case focuses on the potential ethical conflicts involved with physician-owned distributors (PODs). The PowerPoint slides have been changed to allow instructors to first present a short introduction to the case and then, after students have completed their analyses, review each case by discussing three key learning points.
