Includes the decisions of the Supreme Courts of Alabama, Florida, Louisiana, and Mississippi, the Appellate Courts of Alabama and, Sept. 1928/Jan. 1929-Jan./Mar. 1941, the Courts of Appeal of Louisiana.

From sexual abuse and fetishism to necrophilia and sadomasochism, this unique volume identifies fourteen classifications of unusual sexual pathologies.

Emphasizing the physical and psychological aspects of sexuality itself, the book presents detailed comparisons of legal and medical definitions, historical aspects, current incidence, and geographical prevalence of these offenses. It also explores the potential causes, discussing etiological theories and reviewing psychopathology. Highlighting the cross-cultural nature of the forensic aspects of human sexuality, the book examines various case studies in the context of international legislation. It also covers minor aberrant behavior such as coprolalia and troilism.

This text introduces students to the study of law from a sociological perspective by focusing on four themes: the relationship between law and society; law in everyday life; the role of race, class and gender in the legal system; and current political debates that are connected to law.

This report describes the results of a National Institute of Justice (NIJ)-sponsored research effort to identify and prioritize criminal justice needs related to digital evidence collection, management, analysis, and use. With digital devices becoming ubiquitous, digital evidence is increasingly important to the investigation and prosecution of many types of crimes. These devices often contain information about crimes committed, movement of suspects, and criminal associates. However, there are significant challenges to successfully using digital evidence in prosecutions, including

inexperience of patrol officers and detectives in preserving and collecting digital evidence, lack of familiarity with digital evidence on the part of court officials, and an overwhelming volume of work for digital evidence examiners. Through structured interaction with police digital forensic experts, prosecuting attorneys, a privacy advocate, and industry representatives, the effort identified and prioritized specific needs to improve utilization of digital evidence in criminal justice. Several top-tier needs emerged from the analysis, including education of prosecutors and judges regarding digital evidence opportunities and challenges; training for patrol officers and investigators to promote better collection and preservation of digital evidence; tools for detectives to triage analysis of digital evidence in the field; development of regional models to make digital evidence analysis capability available to small departments; and training to address concerns about maintaining the currency of training and technology available to digital forensic examiners.

Braithwaite argues that shame can be used as a constructive way to help criminals. Questions of gender, race, class, and sexuality have largely been left unexamined in surveillance studies. The contributors to this field-defining collection take up these questions, and in so doing provide new directions for analyzing surveillance. They use feminist theory to expose the ways in which surveillance practices and technologies are tied to systemic forms of discrimination that serve to normalize whiteness, able-bodiedness, capitalism, and heterosexuality. The essays discuss the implications of,

among others, patriarchal surveillance in colonial North America, surveillance aimed at curbing the trafficking of women and sex work, women presented as having agency in the creation of the images that display their bodies via social media, full-body airport scanners, and mainstream news media discussion of honor killings in Canada and the concomitant surveillance of Muslim bodies. Rather than rehashing arguments as to whether or not surveillance keeps the state safe, the contributors investigate what constitutes surveillance, who is scrutinized, why, and at what cost. The work fills a gap in feminist scholarship and shows that gender, race, class, and sexuality should be central to any study of surveillance. Contributors. The relationships between knowledge, technologies, and legal processes are central to the constitution of contemporary societies. As such, they have come to provide the focus for a range of academic projects, across interdisciplinary legal studies and the social sciences. The domains of medical law and ethics, intellectual property law, environmental law and criminal law are just some of

those within which the pervasive place and 'impact' of technoscience is immediately apparent. At the same time, social scientists investigating the making of technology and expertise - in particular, scholars working within the tradition of science and technology studies - frequently interrogate how regulation and legal processes, and the making of knowledge and technologies, are intermingled in complex ways that come to shape and define each other. This book charts the important interface between studies of law, science and society, as explored from the perspectives of socio-legal studies and the increasingly influential field of science and technology studies. It brings together scholars from both areas to interrogate the joint roles of law and science in the construction and stabilization of socio-technical networks, objects, and standards, as well as their place in the production of contemporary social realities and subjectivities.

A practical tool for legal professionals who wish to strengthen their skills in applying the European Convention on Human Rights and the case law of the European Court of Human Rights in their daily work This is the second and expanded edition of a handbook intended to assist judges, lawyers and prosecutors in taking account of the requirements of the European Convention on Human Rights and its Protocols (“the European Convention”) – and more particularly of the case law of the European Court of Human Rights – when interpreting and applying codes of criminal procedure and comparable or related legislation. It does so by providing extracts from key rulings of the European Court and the former European Commission of Human Rights that have

determined applications complaining about one or more violations of the European Convention in the course of the investigation, prosecution and trial of alleged offences, as well as in the course of appellate and various other proceedings linked to the criminal process.

In the twenty-first century, fighting impunity has become both the rallying cry and a metric of progress for human rights. The new emphasis on criminal prosecution represents a fundamental change in the positions and priorities of students and practitioners of human rights and transitional justice: it has become almost unquestionable common sense that criminal punishment is a legal, political, and pragmatic imperative for addressing human rights violations. This book challenges that common sense. It does so by documenting and critically analyzing the trend toward an anti-impunity norm in a variety of institutional and geographical contexts, with an eye toward the interaction between practices at the global and local levels. Together, the chapters demonstrate how this laser focus on anti-impunity has created blind spots in practice and in scholarship that result in a constricted response to human rights violations, a narrowed conception of justice, and an impoverished approach to peace.
