Loyalty is one of the main assets of a brand. In today's markets, achieving and maintaining loyal customers has become an increasingly complex challenge for brands due to the widespread acceptance and adoption of diverse technologies by which customers communicate with brands. Customers use different channels (physical, web, apps, social media) to seek information about a brand, communicate with it, chat about the brand and purchase its products. Firms are thus continuously changing and adapting their processes to provide customers with agile communication channels and coherent, integrated brand experiences

through the different channels in which customers are present. In this context, understanding how brand management can improve value co-creation and multichannel experience—among other issues—and contribute to improving a brand's portfolio of loyal customers constitutes an area of special interest for academics and marketing professionals. This Special Issue explores new areas of customer loyalty and brand management, providing new insights into the field. Both concepts have evolved over the last decade to encompass such concepts and practices as brand image, experiences, multichannel context, multimedia platforms and value co-creation, as well as relational variables such as trust, engagement and identification (among others).

Ports and cities are historically strongly linked, but the link between port and city growth has become weaker. This book examines how ports can regain their role as drivers of urban economic growth and how negative port impacts can be mitigated.

The Rhythm of Space and the Sound of Time examines the place of Chekhov's Technique in contemporary acting pedagogy and practice. Cynthia Ashperger answers the questions: What are the reasons behind the technique's current resurgence? How has this cohesive and holistic training been brought into today's mainstream acting training? What separates this technique from the other currently popular methods? Ashperger offers an analysis of the complex philosophical influences that shaped Chekhov's ideas about this psycho-physical approach to acting. Chekhov's five guiding principles are introduced to demonstrate how eastern ideas and practices have been integrated into this western technique and how they have continued to develop on both theoretical and practical levels in contemporary pedagogy, thereby rendering it intercultural. The volume also focuses on the work of several contemporary teachers of the technique associated with Michael Chekhov International Association (MICHA).

Current teacher training is described as well as the different modes of hybridization of Chekhov's technique with other current methods. Contemporary practical experiments and some fifty exercises at both beginner and intermediate/advanced levels are presented through analysis, examples, student journals and case studies, delineating the sequences in which units are taught and specifying the exercises that differ from those in Chekhov's original writing. This book is for practitioners as well as students of the theatre.

Recounts Croatia's development from the early Middle Ages to the present day. Unlike most Western histories of the region, which tend to neglect the concurrent evolution of Croatia's constituent parts, this comprehensive volume shows that Croatia has instead developed gradually and organically.

It has, improbably, been called uncommonly lucid, even riveting by The New York Times, and it was a finalist for the 2004 National Book Awards nonfiction honor. Report, which was, before its publication, perhaps one of the most anticipated government reports of all time, and has been since an unlikely bestseller. The official statement by the National Commission on Terrorist Attacks Upon the United States-which was instituted in late 2002 and chaired by former New Jersey Governor Thomas Kean-it details what went wrong on that day (such as intelligence failures), what went right (the heroic response of emergency services and self-organizing civilians), and how to avert similar future attacks. Highlighting evidence from the day, from airport surveillance footage of the terrorists to phone calls from the doomed flights, and offering details that have otherwise gone unheard, this is an astonishing firsthand document of contemporary history. While controversial in parts-it has been criticized for failing to include testimony from key individuals, and it completely omits any mention of the mysterious collapse of WTC 7-it is nevertheless an essential record of one of the most transformational events of modern times.

Concerns over vanishing destinations such as the Great Barrier Reef, Antarctica, and the ice cap on Mt. Kilimanjaro have prompted some travel operators and tour agencies to recommend these destinations to consumers before they disappear. This travel trend has been reported as: 'disappearing tourism,' 'doom tourism,' and most commonly 'last chance tourism' where tourists explicitly seek

vanishing landscapes or seascapes, and/or disappearing natural and/or social heritage. However, despite this increasing form of travel there has been little examination in the academic literature of last chance tourism phenomenon. This is the first book to empirically examine and evaluate this contemporary tourism development providing a new angle on the effects of global change and pressures of visitation on tourism destinations. It aims to develop the conceptual definition of last chance tourism, examine the ethics surrounding this type of travel, and provide case studies highlighting this form of tourism in different regions, and in different contexts. In particular it critically reviews the advantages of publicizing vulnerable destinations to raise awareness and promote conservation efforts. Conversely, the book draws attention to the issue of attracting more tourists seeking to undergo such experiences before they are gone forever, accelerating the negative impacts. It further examines current trends, discusses escalating challenges, provides management strategies, and highlights future research opportunities. Last Chance Tourism is a timely and multi-disciplinary volume featuring contributions from leading scholars in the fields of leisure, tourism, anthropology, geography, and sociology. It draws on a range of international case studies and will be of interest to students, researchers and academics interested in Tourism, Environmental Studies and Development

a logical advancement on his earlier studies, Fine has successfully tackled a fascinating historical question, one having broad political implications for our own times. Fine's approach is to demonstrate how ideas of identity and self-identity were invented and evolved in medieval and early-modern times. At the same time, this book can be read as a critique of twentieth-century historiography-and this makes Fine's contribution even more valuable. This book is an original, much-needed contribution to the field of Balkan studies." -Steve Rapp, Associate Professor of Caucasian, Byzantine, and Eurasian History, and Director, Program in World History and Cultures Department of History, Georgia State University Atlanta

When Ethnicity Did Not Matter in the Balkans is a study of the people who lived in what is now Croatia during the Middle Ages (roughly 600-1500) and the early-modern period (1500-1800), and how they identified themselves and were identified by others. John V. A. Fine, Jr., advances the discussion of identity by asking such questions as: Did most, some, or any of the population of that territory see itself as Croatian? If some did not, to what other communities did they consider themselves to belong? Were the labels attached to a given person or population fixed or could they change? And were some people members of several different communities at a given moment? And if there were competing identities, which identities held sway in which particular regions? In When Ethnicity Did Not Matter in the Balkans, Fine investigates the identity labels (and their meaning) employed by and about the medieval and early-modern population of the lands that make up present-day

Croatia. Religion, local residence, and narrow family or broader clan all played important parts in past and present identities. Fine, however, concentrates chiefly on broader secular names that reflect attachment to a city, region, tribe or clan, a labeled people, or state. The result is a magisterial analysis showing us the complexity of pre-national identity in Croatia, Dalmatia, and Slavonia. There can be no question that the medieval and early-modern periods were pre-national times, but Fine has taken a further step by demonstrating that the medieval and early-modern eras in this region were also pre-ethnic so far as local identities are concerned. The back-projection of twentieth-century forms of identity into the pre-modern past by patriotic and nationalist historians has been brought to light. Though this back-projection is not always misleading, it can be; Fine is fully cognizant of the danger and has risen to the occasion to combat it while frequently remarking in the text that his findings for the Balkans have parallels elsewhere. John V. A. Fine, Jr. is Professor of History at the University of Michigan.

The why, what and how of the electric vehicle powertrain Empowers engineering professionals and students with the knowledge and skills required to engineer electric vehicle powertrain architectures, energy storage systems, power electronics converters and electric drives. The modern electric powertrain is relatively new for the automotive industry, and engineers are challenged with designing affordable, efficient and high-performance electric powertrains as the industry undergoes a technological evolution. Co-authored by two electric vehicle (EV) engineers with decades of experience designing and putting into production all of the powertrain technologies presented, this book provides readers with the hands-on knowledge, skills and expertise they need to rise to that challenge. This four-part practical guide provides a comprehensive review of battery, hybrid and fuel cell EV systems and the associated energy sources, power electronics, machines, and drives. The first part of the book begins with a historical overview of electromobility and the related environmental impacts motivating the development of the electric powertrain. Vehicular requirements for electromechanical propulsion are then presented. Battery electric vehicles (BEV), fuel cell electric vehicles (FCEV), and conventional and hybrid electric vehicles (HEV) are then described, contrasted and compared for vehicle propulsion. The second part of the book features in-depth analysis of the electric powertrain traction machines, with a particular focus on

the induction machine and the surface- and interior-permanent magnet ac machines. The brushed dc machine is also considered due to its ease of operation and understanding, and its historical place, especially as the traction machine on NASA's Mars rovers. The third part of the book features the theory and applications for the propulsion, charging, accessory, and auxiliary power electronics converters. Chapters are presented on isolated and non-isolated dc-dc converters, traction inverters, and battery charging. The fourth part presents the introductory and applied electromagnetism required as a foundation throughout the book.

Energy Systems, Power Electronics and Drives for Hybrid, Electric and Fuel Cell Vehicles is an important professional resource for practitioners and researchers in the battery, hybrid, and fuel cell EV transportation industry. The book is a structured holistic textbook for the teaching of the fundamental theories and applications of energy sources, power electronics, and electric machines and drives to engineering undergraduate and postgraduate students. Textbook Structure and Suggested Teaching Curriculum This is primarily an engineering textbook covering the automotive powertrain, energy storage and energy conversion, power electronics, and electrical machines. A significant additional focus is placed on the engineering design, the energy for transportation, and the related environmental impacts. This textbook is an educational tool for practicing engineers and others, such as transportation policy planners and regulators. The modern automobile is used as the vehicle upon which to base the theory and applications, which makes the book a useful educational reference for our industry colleagues, from chemists to engineers. This material is also written to be of interest to the general reader, who may have little or no interest in the power electronics and machines. Introductory science, mathematics, and an inquiring mind suffice for some chapters. The general reader can read the introduction to each of the chapters and move to the next as soon as the material gets too advanced for him or her. Part I Vehicles and Energy Sources Chapter 1 Electromobility and the Environment Chapter 2 Vehicle Dynamics Chapter 3 Batteries Chapter 4 Fuel Cells Chapter 5

It covers the introductory automotive material using basic concepts from mechanical, electrical, environmental, and electrochemical engineering. Chapter 14 on electrical charging and Chapter 16 on electromagnetism can also be used as a general introduction to electrical engineering. The basics of electromagnetism, ferromagnetism and electromechanical energy conversion (Chapter 16) and dc machines (Chapter 7) can be taught to second year (sophomore) engineering students who have completed introductory electrical circuits and physics. The third year (junior) students typically have covered ac circuit analysis, and so they can cover ac machines, such as the induction machine (Chapter 8) and the surface permanent-magnet ac machine (Chapter 9). As the students typically have studied control theory, they can investigate the control of the speed and torque loops of the

motor drive (Chapter 15). Power electronics, featuring non-isolated buck and boost converters (Chapter 11), can also be introduced in the third year. The final-year (senior) students can then go on to cover the more advanced technologies of the interior-permanent-magnet ac machine (Chapter 10). Isolated power converters (Chapter 12), such as the full-bridge and resonant converters, inverters (Chapter 13), and power-factor-corrected battery chargers (Chapter 14), are covered in the power electronics section. This material can also be covered at the introductory postgraduate level. Various homework, simulation, and research exercises are presented throughout the textbook. The reader is encouraged to attempt these exercises as part of the learning experience. Instructors are encouraged to contact the author, John Hayes, direct to discuss course content or structure.

When Miroslav Krleža traveled through Russia for six months between the end of 1924 and the beginning of 1925, the celebrated Croatian writer was there to figure out what it all meant. The sprawling country was still coming to terms with the events of the 1917 revolution and reeling from Lenin's death in January 1924. During this period of profound political and social transition, Krleža opened his senses to train stations, cities, and villages and collected wildly different Russian perspectives on their collective moment in history. Krleža's impressionistic reportage of mass demonstrations and jubilant Orthodox Easter celebrations is informed by his preoccupation with the political, social, and psychological complexities of his environment. The result is a masterfully crafted modernist travelogue that resonates today as much as it did when first published in 1926.

This publication provides an overview of the common and unique sustainability elements of Indigenous Peoples' food systems, in terms of natural resource management, access to the market, diet diversity, indigenous peoples' governance systems, and links to traditional knowledge and indigenous languages. While enhancing the learning on Indigenous Peoples food systems, it will raise awareness on the need to enhance the protection of Indigenous Peoples' food systems as a source of livelihood for the 476 million indigenous inhabitants in the world, while contributing to the Zero Hunger Goal. In addition, the UN Decade of Action on Nutrition (2016-2025) and the UN Food Systems Summit call on the enhancement of sustainable food systems and on the importance of diversifying diets with nutritious foods, while broadening the existing food base and preserving biodiversity. This is a feature characteristic of Indigenous Peoples' food systems since hundreds of years, which can provide answers to the current debate on sustainable food systems and resilience.
