Bitcoin is going wild, with a valuation that has gone from zero to higher than \$6,000 in just four years. Altcoins are springing up like mushrooms; some will thrive and others will fade away. Blockchain is the new buzzword that everyone is excited about. It's the dotcom bubble all over again, and if you can trade it and not blow your account up you can make a killing. But cryptocurrencies are not the same as equities or bonds. They are their own ecosystem and they obey new rules that no-one fully understands. This means there is big risk in trading them - but also the chance of a big reward. This book tells you everything you need to know about cryptocurrencies - what they are, how they work, and how you can make money from them. The author explains how Bitcoin exchanges and trading sites work and walks you through your first purchase of Bitcoins. He talks about trading different cryptocurrencies, market making, and the fundamentals of selecting a good coin to buy. He also covers mining cryptocoins, and for those that are interested in the technical aspect of cryptocurrencies and the blockchain he delves into the details behind them. If you are interested in joining this exciting new area of investing and trading, this book will be an invaluable guide.

Instead of talking about investing, this book will focus on how blockchain technology works and how it might be used in the future. Topics you can expect to see in this book include: What problem does blockchain solve? How can technology make our institutions faster and less expensive? Could technology replace our institutions (like governments, banks, etc) altogether? How does blockchain build trust between strangers? How does blockchain increase security for transactions and contracts? Can blockchain be used outside of finance? What is a block? What is the chain and why do we need it? What's a technical explanation of what happens in the blockchain? What is mining and why do we need it? Are there alternatives to mining to create a blockchain? What's the story of Bitcoin? Does Bitcoin have any problems? What is Ethereum, and what is a smart contract? Are there other blockchain technologies I should know about? How are companies adopting blockchain? What regulatory hurdles might slow blockchain adoption? Whew, that's a lot of questions. If you're ready to tackle them, I'm ready

If yes, then keep reading... Cryptocurrency is a disruptive concept used in the current monetary system as an alternative to fiat currency. Entrepreneurs, startups, and large as well as small and medium-sized enterprises (SMEs) take an interest in cryptocurrencies and consider them a groundbreaking tool to combat transactional compliances. Because of these reasons, the ecosystem has attracted vast venture funding, alliances, and partnerships among vendors of cryptocurrency solutions to provide end-to-end solutions. Plenty of people invest in building payment gateways and websites for their currencies. When a customer makes a purchase using a cryptocurrency as payment, the transaction often passes a fixed exchange rate through the payment gateway. It translates immediately to commonly accepted fiat currency so that the merchant can escape the cryptocurrency market instability. Cryptocurrency payment has several advantages, such as improved transactional security, fraud protection, decentralized framework, low fees, customer chargeback protection, and rapid international transfers. Throughout history, we've used different mediums of exchange like commodity money, paper money, gold standard, fiat currencies etc. Different scientific communities across the world have been dissatisfied with the short-comings of these traditional currencies. Due to the explosion of internet and progress made in the fields of cryptography, online security, and digital payments, it became possible to have a decentralized currency that could void the necessity of a central bank or government. A white-paper explaining the details of bitcoin implementation was first published under the pseudo-name of Satoshi Nakamoto in October 2008. The paper is titled "Bitcoin: A Peer-to-Peer Electronic Cash System" and can be downloaded at www.bitcoin.org/bitcoin.pdf. On January 2009, Satoshi released the initial version of the bitcoin software on SourceForge.net, opening the technology up to the public.
