Adopting a multi-disciplinary approach to the practice of achieving a more acceptable acoustic environment, this book draws on the same basic principles to cover both the outdoors and indoor space. It starts with the fundamentals of sound waves and hearing and goes on to the measurement of noise and vibration, room acoustics, sound absorption, airb

This book offers the first systematic investigation of the phenomenon of soft law within the framework of the EC (the first pillar of the EU), and its use by the European Commission and Council of Ministers. It focusses upon how soft law fits into the Community legal system, and how it is used, and, in particular, how it relates to Community legislation. Differentiation of the Community instruments, including the instruments of soft law, is often thought to enhance the effectiveness, legitimacy and transparency of the Community. This book asks whether soft law indeed provides a satisfactory alternative to legislation from this perspective and, if so, in what cases and under what conditions. Furthermore, the author asks to what extent the use of soft law implies good governance, and throws fresh light on this very heterogenous phenomenon, by looking at frequently used instruments in many different areas of Community law, such as competition law, state aid, environment, social policy etc., in the process identifying their different characteristics, aims, functions and legal effects. What emerges is that the conditions under which soft law is used may be problematic in relation to increasing the legitimacy, effectiveness and transparency of Community action. This is a work which will interest legal practitioners confronted with the use of soft law and the question of its possible legal effect in an increasing number of sectors and academics interested in the vexed question of how the

increased use of soft law can be justified in a Community legal order built upon the rule of law. It is also critical of developments taking place within the framework of the European Convention and the proposed European Constitution, and goes beyond the immediate problems of soft law to touch upon issues such as competence, legal protection, division of powers between the EC and the Member States, institutional balance, lawmaking by the Community Courts, the scope of Community legal principles and the influence of soft law on the progressive development of both Community and national law.

Preventing loss of life and protecting the human rights of refugees, asylum seekers and migrants at sea The protection of refugees, asylum-seekers and migrants travelling by sea forms an integral part of international human rights, refugee and maritime laws. As explained in this document, states have clear obligations to aid any person found in distress at sea, to rescue people in distress and to ensure that their rights – including the right to life and to protection from refoulement – are upheld. Therefore, the Council of Europe Commissioner for Human Rights is putting forward a Recommendation on how to help member states make these rights practical and effective.

The Northern home-front during the Civil War was far from tranquil. Fierce political debates set communities on edge, spurred secret plots against the Union, and triggered widespread violence. At the heart of all this turmoil stood the anti-war Democrats, nicknamed "Copperheads." Now, Jennifer L. Weber offers the first full-length portrait of this powerful faction to appear in almost half a century. Weber reveals how the Copperheads came perilously close to defeating Lincoln and ending the war in the South's favor. Indeed, by the summer of 1864, they had grown so strong that Lincoln himself thought his defeat was

"exceedingly likely." Passionate defenders of civil liberties and states' rights--and often virulent racists--the Copperheads deplored Lincoln's suspension of habeas corpus, his liberal interpretation of the Constitution, and, most vehemently, his moves toward emancipation. Weber reveals how the battle over these issues grew so heated that Northerners feared their neighbors would destroy their livestock, burn their homes, even kill them. And she illuminates the role of Union soldiers, who, furious at Copperhead attacks on the war effort, moved firmly behind Lincoln. The soldiers' support for the embattled president kept him alive politically in his darkest times, and their victories on the battlefield secured his re-election. Packed with sharp observation and fresh interpretations, *Copperheads* is a gripping account of the fierce dissent that Lincoln called "the fire in the rear."

The Book of Blam, Aleksandar Tišma's "extended kaddish . . . [his] masterpiece" (Kirkus Reviews), is a modern-day retelling of the book of Job. The war is over. Miroslav Blam walks along the former Jew Street, and he remembers. He remembers Aaron Grün, the hunchbacked watchmaker; and Eduard Fiker, a lamp merchant; and Jakob Mentele, a stove fitter; and Arthur Spitzer, a grocer, who played amateur soccer and had non-Jewish friends; and Sándor Vértes, a lawyer who was a Communist. All dead. As are his younger sister and his best friend, a Serb, both of whom joined the resistance movement; and his mother and father in the infamous Novi Sad raid in January 1942—when the Hungarian Arrow Cross executed 1,400 Jews and Serbs on the banks of the Danube and tossed them into the river. Blam lives. The war he survived will never be over for him.

This book presents a collection of state-of-the-art work in corpus-based interpreting studies, highlighting international research on the properties of interpreted speech, based on naturalistic interpreting data. Interpreting research has long been hampered

by the lack of naturalistic data that would allow researchers to make empirically valid generalizations about interpreting. The researchers who present their work here have played a pioneering role in the compilation of interpreting data and in the exploitation of that data. The collection focuses on both of these aspects, including a detailed overview of interpreting corpora, a collective paper on the way forward in corpus compilation and several studies on interpreted speech in diverse language pairs and interpreter-mediated settings, based on existing corpora.

Global Society, Cosmopolitanism and Human Rights is the outcome of a decade-long scholarly project. The point of convergence emerging from the analyses contained in this volume is that "global society", "cosmopolitanism" and "human rights" are likely to constitute the basis of present and future ways of life. The "project for humanity" of the future, while resting on local social associations, will have "globality" as its reference. A world dominated by globalisation processes obliges the so ...

Elements of Differentiable Dynamics and Bifurcation Theory provides an introduction to differentiable dynamics, with emphasis on bifurcation theory and hyperbolicity that is essential for the understanding of complicated time evolutions occurring in nature. This book discusses the differentiable dynamics, vector fields, fixed points and periodic orbits, and stable and unstable manifolds. The bifurcations of fixed points of a map and periodic orbits, case of semiflows, and saddle-node and Hopf bifurcation are also elaborated. This text likewise covers the persistence of normally hyperbolic manifolds,

hyperbolic sets, homoclinic and heteroclinic intersections, and global bifurcations. This publication is suitable for mathematicians and mathematically inclined students of the natural sciences.

Translation by Joe Bandel. This is the first collection of short stories by Karl Hans Strobl to have ever been translated into the English language. Karl Hans Strobl was noted for his short fiction, particularly his dark fantasy fiction and "Lemuria" collects some of his finest stories. You can sense his passion and zest for living in these pages. These stories come at a time when "Steam Punk" is popular. His stories fit into this genre quite well and it is astonishing how modern and readable these fantastic stories are. As an avid reader of science fiction and fantasy, I've become convinced that there is a power and force within these stories that is very hard to find in today's world. Stories include: The Mermaid; At a Cross Roads; The Witch Finder; The Head; The Repulsion of the Will; My Adventure with Jonas Barg; The Manuscript of Juan Serrano; Familiar Moves; The Tomb at Pere La Chaise; The Wicked Nun; The Bogumil Stone; Master Jericho The first commentary to adopt an integrated approach to Satire 6 by drawing together a multiplicity of different perspectives.

Sport is often seen as an indicator of the civic maturity of a community, an aspect of the rights of citizens to health, education and social integration. This book examines the relationships between participation in sport and physical activity, and welfare policies across Europe. It argues that the success of campaigns for the promotion of sport depend on the existence of dedicated welfare policies promoted by the European states and explores variations in cultural models and structures of governance across Europe. Addressing the function of supranational institutions such as the EU as well as voluntary networks, the book illuminates key issues in European societies such as migration, financial austerity and Brexit as they relate to sport policy. This is important reading for scholars and students in the fields of European sport and physical activity, sociology, political science and organisational analysis, as well as operators and managers of the sport systems involved in advanced training programmes.

This book is focused on the challenges to implement sustainability in diverse contexts such as agribusiness, natural resource systems and new technologies. The experiences made by the researchers of the School of Agricultural, Forestry, Food and Environmental Science (SAFE) of the University of Basilicata offer a wide and multidisciplinary approach to the identification and testing of different solutions tailored to the economic, social and environmental characteristics of the region and the surrounding areas. Basilicata's productive system is mainly based on activities related to the agricultural sector and exploitation of natural resources but it has seen, in recent years, an industrial development driven by the discovery of oil fields. SAFE research took up the challenge posed by market competition to create value through the sustainable use of renewable and non-renewable resources of the territory. Moreover, due to its unique geographical position in the middle of the Mediterranean basin, Basilicata is an excellent "open

sky” laboratory for testing sustainable solutions adaptable to other Mediterranean areas. This collection of multidisciplinary case studies and research experiences from SAFE researchers and their scientific partners is a stimulating contribution to the debate on the development of sustainable techniques, methods and applications for the Mediterranean regions.

Fourteen years on from its last edition, *Cable Supported Bridges: Concept and Design*, Third Edition, has been significantly updated with new material and brand new imagery throughout. Since the appearance of the second edition, the focus on the dynamic response of cable supported bridges has increased, and this development is recognised with two new chapters, covering bridge aerodynamics and other dynamic topics such as pedestrian-induced vibrations and bridge monitoring. This book concentrates on the synthesis of cable supported bridges, suspension as well as cable stayed, covering both design and construction aspects. The emphasis is on the conceptual design phase where the main features of the bridge will be determined. Based on comparative analyses with relatively simple mathematical expressions, the different structural forms are quantified and preliminary optimization demonstrated. This provides a first estimate on dimensions of the main load carrying elements to give in an initial input for mathematical computer models used in the detailed design phase. Key features:

- Describes evolution and trends within the design and construction of cable supported bridges
- Describes the response of structures to dynamic actions that have attracted growing attention in recent years
- Highlights features of the different structural components and their interaction in the entire structural system
- Presents simple mathematical expressions to give a first estimate on dimensions of the load carrying elements to be used in an initial computer input

This comprehensive coverage of the design and construction of cable supported bridges provides

The invention of collage by Picasso and Braque in 1912 proved to be a dramatic turning point in the development of Cubism and Futurism and ultimately one of the most significant innovations in twentieth-century art. Collage has traditionally been viewed as a new expression of modernism, one allied with modernism's search for purity of means, anti-illusionism, unity, and autonomy of form. This book - the first comprehensive study of collage and its relation to modernism - challenges this view. Christine Poggi argues that collage did not become a new language of modernism but a new language with which to critique modernism. She focuses on the ways Cubist collage - and the Futurist multimedia work that was inspired by it - undermined prevailing notions of material and stylistic unity, subverted the role of the frame and pictorial ground, and brought the languages of high and low culture into a new relationship of exchange.

Technological pedagogical content knowledge (TPCK) reflects a new direction in understanding the complex interactions among content, pedagogy, learners and technology that can result in successful integration of multiple technologies in teaching and learning. The purpose of this edited volume is to introduce TPCK as a conceptual framework for grounding research in the area of teachers' cognitive understanding of the interactions of technology with content, pedagogy and learner conceptions. Accordingly, the contributions will constitute systematic research efforts that use TPCK to develop lines of educational technology research exemplifying current theoretical conceptions of TPCK and methodological and pedagogical approaches of how to

This is the first volume in a new series on 'Great Minds in Regional Science,' which seeks to present a contemporary view on the scientific relevance of the work done by great thinkers in regional science. It presents, among others, Walter Isard, Martin Beckmann and Gunnar Myrdal. Each contribution combines factual biographical information, a description of their major contributions, and a discussion of the broader context of the work, as well as an assessment of its current relevance, scientific recognition and policy impact. The book attempts to fill a gap in our knowledge, and to respond to the growing interest in the formation and development of the field of regional science and its key influential figures.

A replacement of the author's well-known book on Translation Theory, *In Search of a Theory of Translation* (1980), this book makes a case for Descriptive Translation Studies as a scholarly activity as well as a branch of the discipline, having immediate consequences for issues of both a theoretical and applied nature. Methodological discussions are complemented by an assortment of case studies of various scopes and levels, with emphasis on the need to contextualize whatever one sets out to focus

on. Part One deals with the position of descriptive studies within TS and justifies the author's choice to devote a whole book to the subject. Part Two gives a detailed rationale for descriptive studies in translation and serves as a framework for the case studies comprising Part Three. Concrete descriptive issues are here tackled within ever growing contexts of a higher level: texts and modes of translational behaviour — in the appropriate cultural setup; textual components — in texts, and through these texts, in cultural constellations. Part Four asks the question: What is knowledge accumulated through descriptive studies performed within one and the same framework likely to yield in terms of theory and practice? This is an excellent book for higher-level translation courses.

Ancient cultures have left written evidence of a variety of scientific texts. But how can/should they be translated? Is it possible to use modern concepts (and terminology) in their translation and which consequences result from this practice? Scholars of various disciplines discuss the practice of translating ancient scientific texts and present examples of these texts and their translations.

This book has two related purposes. The first is to demonstrate the extent and importance of language play in human life; the second is to draw out the implications for applied linguistics and language teaching. Language play should not be thought of as a trivial or peripheral activity, but as central to human thought and culture, to learning, creativity, and intellectual enquiry. It fulfils a major function of language, underpinning

“Tecnologie e progettazione di sistemi informatici e di telecomunicazioni” (che abbrevieremo in TEPSIT) è una materia introdotta dalla recente riforma della scuola superiore ed è stata per la prima volta provata “sul campo” nell'anno scolastica 2012-13. Si tratta quindi di una materia nuova, anche se gran parte degli argomenti – in forma diversa – era già presente nel vecchio ordinamento. Le indicazioni ministeriali sugli argomenti oggetto del corso sono piuttosto generiche, e comprendono: Teoria dell'informazione; Sistemi operativi; Programmazione concorrente; Progettazione informatica; Programmazione di rete. Con l'eccezione del terzo punto, previsto per il quinto anno, non c'è neppure una distinzione precisa tra il terzo e quarto anno. Si tratta in ogni caso di argomenti molto vasti e in continua evoluzione, ed è praticamente impossibile svolgerli tutti allo stesso livello di approfondimento. La scelta di questo di libro di testo digitale è quella di presentare in ogni caso contenuti approfonditi, permettendo quindi ai docenti di “personalizzare” il corso in base ai propri gusti, conoscenze specifiche e richieste del territorio. La seconda scelta, è quella di spostare in questa materia la programmazione HTML e CSS, svolta in modo approfondito e ricco di esempi. L'obiettivo è quello di permettere attività pratiche di progettazione che sarebbero impossibili, nel terzo anno, per un progetto di programmazione: l'idea è di dare a TEPSIT la connotazione della “materia del web”; il tutto verrà rinforzato gli anni

successivi con programmazione client-side, multimedia e nel quinto anno con la programmazione e i servizi server-side. L'eBook è organizzato in modo piuttosto semplice: è diviso in cinque MODULI principali, al loro interno troverete le varie sezioni organizzate in modo gerarchico, per facilitare la navigazione. Le sezioni sono generalmente: un'introduzione generale; l'esposizione degli argomenti, in modo gerarchico; sintesi dell'argomento; una sezione di approfondimento e di link esterni; esercizi. A fine modulo un breve riepilogo, con schemi riassuntivi ed esercizi conclusivi, generalmente più articolati di quelli visti nelle singole sezioni. A completare il tutto trovata alcune mappe mentali per meglio focalizzare gli argomenti. Al termine di ogni modulo troverete: una seconda serie di esercizi, un po' più articolati e generalmente senza soluzione (potrete rivolgervi al vostro professore per delucidazioni); spunti di riflessione su alcuni argomenti particolarmente spinosi. Il libro è ricco di definizioni: per aiutarvi a memorizzarle sono organizzate anche visivamente.
